

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

NAVAL HISTORY,

&c.

LIGHT SQUADRONS AND SINGLE SHIPS.

As we are now entering upon the first exploit of 1811. one of the far-famed american 44-gun frigates, we conceive it will be useful to examine, a little more minutely than we have done, the force and qualifications of a class of ship, little known in Europe, until the President brought herself into notice in the manner we shall presently have to relate. Ame-
rican
fri-
gates.

In our account of the action between the Constellation and Insurgente, we mentioned that, in March, 1794, when a rupture was expected with the regency of Algiers, the government of the United States ordered the construction of four frigates of 44, and two of 36 guns; and we stated that one class was to mount 56 guns, including 30 long 24-pounders on the main deck, and the other 48 guns, including 28 long 18-pounders.* But we are inclined to think that this was not the armament originally intended for these ships; and our opinion is founded on the following facts. Soon after the passing of the act of congress of the 27th of March, 1794, the differences with Algiers were amicably settled; but in the course of the same year, feeling an interest in the success of republican France, the United Order
for
their
con-
struc-
tion.

* See vol. ii. p. 469.

1811.

Two
74s and
one 44
order-
ed.

States pushed their complaints against England to an extremity bordering on war. Now the Algerines possessed no stronger vessels than frigates, and those not of the first class; but England could send to sea a fleet of line-of-battle ships. It was this, we believe, that occasioned the american president to direct, as by a clause in the act he was empowered to do, that, instead of the four 44 and two 36 gun frigates, two 74-gun ships, and one frigate of 44 guns, should be constructed.

The
names
of the
ships.

An english shipwright, Mr. Joshua Humphreys, resident at Philadelphia, was required to give in an estimate of the cost of building a 74-gun ship, to measure 1620 tons american, which, as we shall by and by show, is about 1750 tons english. He did so, and computed the expense, without reckoning the guns, at 342000 dollars. Upon this estimate, as it appears, the timbers were prepared for two 74s; one to be built at Philadelphia and named United-States, the other at Boston and named Constitution. The 44-gun frigate was to be built at Baltimore, and to be named Constellation. Scarcely, however, had the keels of any of these ships been laid down, ere Mr. Jay's treaty restored the amicable relations between England and America, and occasioned a stop to be put to their construction.

The 74s
con-
verted
to fri-
gates.

As the most eligible mode of converting the timbers prepared for the two 74s, it was resolved that, although begun as line-of-battle ships, they should be finished as frigates. This was to be done by contracting the breadth of the frame about three feet and a half, and discontinuing the topside at the clamps of the quarterdeck and forecastle. As these enormous "frigates," although intended to mount 62 guns, were to rate only of 44, it was decided that the frigate originally intended to class as a 44 should bear the designation of a 36. The United-States was launched on the 10th of May, 1797, and cost, exclusive of her ordnance, 299336 dollars; and the Constitution was launched on the 21st of October, in the

Launch-
ing of
United-
States
and
Consti-
tution.

same year, and cost 302718 dollars. This, in either case, was not much below the original estimate, even had the ships been completed as 74s, and shows what a slight change had been effected in their construction. The Constellation was built under the personal direction of commodore Truxton, who first commissioned her, and was launched on the 7th of September, 1797. Owing partly to the dearth of materials, and partly, we believe, to some expensive alterations in her construction, the Constellation cost the enormous sum of 314000 dollars.

When, in the spring of the year 1798, the expense of building these frigates, two of "44," and one of "36 guns," came to be submitted to congress, some explanation was required; and on the 1st of April the secretary at war delivered in a report, of which the following is an extract: "It appears, that the first estimate rendered to congress was for frigates of the common size and dimensions, rated at 36 and 44 guns, and that the appropriations for the armament were founded upon this estimate. It also appears, that, when their size and dimensions came to be maturely considered, due reference being had to the ships they might have to contend with, it was deemed proper, so to alter their dimensions, without changing their rates, as to extend their sphere of utility as much as possible. It was expected, from this alteration, that they would possess, in an eminent degree, the advantage of sailing; that, separately, they would be superior to any single european frigate of the usual dimensions; that, if assailed by numbers, they would be always able to lead ahead; that they could never be obliged to go into action but on their own terms, except in a calm; and that, in heavy weather, they would be capable of engaging double-decked ships. These are the principal advantages contemplated from the change made in their dimensions. Should they be realized, they will more than compensate for having materially swelled the body of expenditures."

1811.

Launch-
ing of
Presi-
dent
and
Phila-
delphia.

In the course of the year 1798, two more 44-gun frigates were built; one, the President, at New-York, the other, the Philadelphia, at Philadelphia. Of the latter we know very little, on account of her loss already mentioned;* but of the former we are enabled to furnish some far from unimportant particulars. Being constructed of timbers prepared for them alone, these frigates were more handsomely moulded than their two predecessors. The President, indeed, was considered to be the most beautiful and the best sailing of all the american frigates; and, being lower in the water than either the United-States or Constitution, was a much more deceiving ship. Her scantling is represented not to have been so stout as theirs; which may have been one reason that she cost only 220910 dollars, while they cost, as we have seen, 300000.

Superior
man-
ner in
which
the
american
frigates
were
built.

With respect to the materials of which the ships were constructed and the pains taken in building them, we can but repeat our former remarks on the same subject. Every thing that was new in the navies of England and France was tried, and, if approved, adopted, no matter, it falling so light from the paucity of individuals, at what expense. There were no contractors, to make a hard bargain pay, by deteriorating the quality of the article; no deputies, ten deep, each to get a picking out of the job. The executive government agreed directly with the artisan; and not a plank was shifted, nor a long-bolt driven, without the scrutinizing eye of one of the captains or commodores; of him, perhaps, who expected, at no distant day, to risk his life and honour on board the very ship whose equipment he was superintending.

Dimen-
sions
of 44-
gun
frigate.

As the number and nature of a ship's guns depend, in a very great degree, upon her size and scantling, we must endeavour to convey an idea of the dimensions of the american 44-gun frigate, before we enter

* See vol. iii. p. 424.

upon the subject of her armament. The United States, Constitution, and President measure within a few fractions of a ton the same; namely, from 1444 to 1445 tons american. We say "tons american," because, although the american standard of weights and measures, the pound and the foot, for instance, is the same as the english, the mode of casting the tonnage of a ship is widely different. This will appear evident when it is known, that the american frigate President, according to the official register in the office at Washington, measured 1444 tons and a fraction;* whereas, when subsequently measured at Portsmouth dock-yard, she was found to be 1533 tons and a fraction.

1811.

Size of
Presi-
dent.

The President's "keel for tonnage," as given in an american publication, is 145 feet; but the english mode of casting the tonnage makes it 146 feet, $7\frac{3}{4}$ inches. In both cases, it is a mere calculation, intended to allow for the rake or inclination of the ship's stem and stern. The first multiplier of the Americans is the breadth across the frame, or moulded breadth, by them usually called the breadth of beam, but the first multiplier of the British is the extreme breadth, or that produced by adding to the moulded breadth double the assumed thickness (in ships of the higher classes five inches) of the plank on the bottom. The second multiplier of each is the respective half-breadths. The american divisor is 95; the british 94. Thus:

Differ-
ence in
the
british
and
ame-
rican
mode
of cast-
ing the
ton-
nage
ex-
plained

	Pt. in.	Ft. in.	Pt. in.	Tons.
Am. method.	145 0	$\times 43 6 = 6308$	$\times 21 9 = 137198 \div 95 = 1444$	$\frac{1}{8}$ ths.
Brit. ditto ..	146 $7\frac{3}{4}$	$\times 44 4 = 6502$	$\times 22 2 = 143044 \div 94 = 1533$	$\frac{2}{3}$ ths.

As it is not generally known, even among the most experienced naval officers of either nation, that any difference exists in the mode of measuring british and american ships of war, the reduction in the alleged tonnage of the latter greatly facilitates the deception, eulogized for its "advantages" by the american government, and to the influence of which

The
decep-
tion it
occa-
sions.

* Clark's Naval History of the United States, vol. ii. p. 240.

1811. upon the european world the american flag owes so much of its glory.

If we consider, that it is only to add about four feet to the extreme breadth of the President, to make her a larger ship than the generality of british 74s, and that her yards are as square, and her masts as stout as theirs, some idea may be formed of the size and formidable appearance of the american 44-gun frigate. In point of scantling, also, that which is acknowledged to be the lightest built of these frigates is at least equal to a british 74 of the largest class. This is proved by taking the thickness of the topsides at the midship maindeck, and foremost quarterdeck, port-sill. In the President, the maindeck port-sill measures 1 ft. 8 in., and, in any british 74 of 1800 tons, 1 ft. 7 in.; and, while in the latter the quarterdeck port-sill measures only 1 ft. 1 in., it measures in the former 1 ft. 5 inches.

Stout
scant-
ling of
the
ame-
rican
44s.

Some
ac-
count
of
their
arma-
ment.

Now for the armament of these 44-gun frigates. Having had ocular proof of the manner in which the President was fitted, we shall take her for our guide. This beautiful ship has, or rather had, for she has long since been taken to pieces, 15 ports and a bridle of a side on the main deck, eight of a side on the quarterdeck, and four of a side, without reckoning the chase-port, on the forecastle. This gave the ship 54 ports for broadside guns; but she had the means of mounting 62 broadside guns. For instance, instead of her gangway, or passage from the forecastle to the quarterdeck, being of the usual width of four or five feet, it was ten feet. This deviation from the common plan was to allow room for the carriage and slide of a 42-pounder carronade; and a novel and very ingenious method was adopted, to obviate the necessity of uniting the quarterdeck and forecastle barricades, or bulwarks, and consequently of destroying that single-decked appearance which, for the purpose of deception, it was necessary to maintain. Between the two barricades the same open or untimbered space remained, as is seen in any

other frigate; but the stanchions for supporting the hammock-cloths were of extraordinary stoutness, and so arranged along the gangway as to form ports for four guns. The breechings were to pass round the iron stanchions, chocks were fitted to the deck to receive the carriages, and the guns could be as effectively mounted as any in the ship.

1811.
Gangway
guns.

We formerly doubted if these eight gangway guns were put on board the President or either of her class-mates; but it has been asserted by british officers, who visited some of the large american frigates during the war with Tripoli, that they at that time mounted guns along the whole extent of their spar-decks. If so, the ships probably landed them upon the return of peace with the Barbary states. The ships were then found to work so much better, that it was decided, we believe, not to supply these eight singularly constructed ports with guns, but merely to add two carronades to the 54 guns, which the ship could mount in the regular way. This was done by fitting the gangway or entrance port to receive a carronade; making nine of a side on the quarterdeck. So that the american 44-gun frigate mounted, along with her 30 long 24-pounders on the main deck, 18 carronades, 42-pounders, on the quarterdeck, and six carronades, 42-pounders, and two long 24-pounders on the forecastle; total 56 guns. This is the number invariably assigned as the force of each of the three "44-gun frigates" in Mr. Clark's american Naval History.*

Ac-
know-
ledged-
gun-
force
of the
44.

The maindeck guns of the United-States were english sea-service guns, measuring nine feet and a half in length, and weighing about 50 cwt. Those of the Constitution were english land-service, or battery guns, in length 10 feet, and in weight about 54 cwt.; but the guns of the President were of american manufacture, measuring eight and a half feet, and weighing only 48½ cwt. We may here mention that, although

1811. the four masked or gangway ports were left vacant, a case might occur, in which they would be of essential benefit. For instance, suppose the ship to be attacked in port, and to be moored in such a manner as to be only assailable on her outer side: she could easily transfer from the opposite side four of her carronades, and thus present a broadside force of 32, or, admitting that some inconvenience would arise from the closeness of the aftermost of those four guns to the temporary gun in the gangway port, of 31, heavy guns.

Com-
ple-
ment
of men

can 44.

For the purpose of showing that, if the President and her two formidable class-mates had been equipped with the whole of the 62 guns which they were constructed to carry, they would have required no addition to their established complement of men, we will state a few facts relative to the composition of american crews. When, in the year 1794, the Americans began arming against the Algerines, the following were ordered to be the proportions, in which the different ratings or classes of a crew of 370 men were to bear to each other: officers and petty officers 66, able seamen 150, ordinary seamen 100, marines 54. Here, be it observed, are wanted two ratings, either of which usually forms no inconsiderable proportion of a british crew, landmen and boys. In later years, however, a few boys or lads were admitted; and, estimating the crew of an american 44-gun frigate at 475 men and boys, we may venture to give the following as its organization: officers and petty officers 80, able seamen 180, ordinary seamen 145, marines 65, boys 5. But, in reality, the distinction between the able and the ordinary seaman was merely nominal, the fastidiousness of the american government requiring the latter to be nearly equal in qualifications to the former. Nor was it enough to be a practised seaman: the volunteer must also, in age, stature, and bodily vigour, be able to stand the test of the strictest scrutiny.

While, therefore, the officers, or the greater part of them, were native Americans, the petty officers consisted, almost wholly, of the first order of british seamen; of whom, also, the bulk of the crew was composed. Owing to the absence of any restraint similar to that imposed by the game-laws of England, the american peasant is a sportsman from his infancy. Hence, the marines consisted of native Americans; not only as being the best marksmen, especially with the rifle, but because the british marine corps, to its credit, afforded very few deserters. It may now be understood what is meant, when it is stated, that an american ship of war is manned with a picked crew.

Having now, as we trust, clearly shown, that those who called the american 44-gun frigate a "line-of-battle ship in disguise," did not commit the gross mistake with which they were charged, we shall offer a word or two on the subject of the american 36-gun frigate. Even here was a frigate more than equal to any french or english frigate of the largest class, carrying long 18-pounders; and, be it remembered, in the year 1811, France did not own any, and England only three frigates, (Cornwallis, Indefatigable, and Endymion,) that carried long 24-pounders. Upon a certain occasion, which will soon pass in order of detail, the Americans loudly proclaimed, that the Chesapeake was the very worst frigate they possessed. The Chesapeake was a 36-gun frigate, and, as we have elsewhere shown, had the ports for mounting on her two broadsides 54 guns.* For a short time, we believe, the ship did mount that number of guns, with a crew of about 440 men. Besides the Constellation and Chesapeake, built in 1797, there were the Congress and New-York, built in 1799. Had the Americans possessed no stronger frigates than the heaviest of these, Europeans would not have been so surfeited with tales of american naval prowess.

On the 10th of May, 1811, the United States' 44-gun frigate President, captain Charles Ludlow,

1811. bearing the broad pendant of commodore John Rodgers, with sails unbent, and the principal part of her officers on shore, lay moored off Annapolis in the Chesapeake; when, at 3 P. M., the commodore came unexpectedly on board, and immediately all hands went to work bending sails and getting the ship ready for sea. The surgeon, too, began preparing his plasters and splinters, and rubbing up his instruments of amputation; rather an extraordinary occupation on board a neutral frigate. All this bustle and preparation was not, however, without an object. On the 1st of the month, in the forenoon, the british 38-gun frigate *Guerrière*, captain Samuel John Pechell, cruising off Sandy-Hook, boarded the american brig *Spitfire*, from Portland bound to New-York, and impressed out of her a man named John Deguyo, a passenger and a native citizen of the United States. The *Guerrière* had also impressed, or did shortly afterwards impress, from vessels that she boarded off the coast, two other native american citizens, Gideon Caprian and Joshua Leeds. That John Deguyo was a native american, or, at all events, that he was not a british subject, is clear from the circumstance, that on the 12th of June the *Guerrière* discharged him into the british 18-gun ship-sloop *Gorée*, captain Henry Dilkes Byng; and, on the 30th, the latter put him on board an american ship for a passage to the United States. Caprian was also discharged, but not Leeds, because he had entered.

Orders
given
to com-
mo-
dore
Rod-
gers.

The *Spitfire* arrived at New-York on the same day, or the day after, Deguyo had been pressed out of her; and the occurrence, within five or six days at the farthest, must have been known at Washington. The written orders to commodore Rodgers were probably, as Mr. Secretary Munroe asserts, "to protect the coast and commerce of the United States;" but the officers who arrived from Washington on the 11th of May, to join their ship, must have brought some verbal orders of a more particular nature; for one of the President's officers,

in a letter to a friend, says: "By the officers who came from Washington we learn, that we are sent in pursuit of the british frigate, who had impressed a passenger from a brig." This british frigate was reported to be the *Guerrière*; and the american officer anticipates, along with a refusal on the part of her commander to deliver up the man, an engagement between the President and a british frigate "exactly her force."

1811.
May.

On the 12th of May, at daylight, the President got under way, and began working down the bay. On the 13th the commodore spoke a brig, who had, the preceding day seen a ship, supposed to be the *Guerrière*, off Cape Henry. But, if the date and place are correct, it could not have been the *Guerrière*; as, at noon on the 12th, she was nearly abreast of Cape Roman, South-Carolina. An extra quantity of shot and wads were now got on deck, and the ship was cleared for action. In the evening the wind shifted to a fair quarter, and the President ran before it. On the 14th the american frigate was off Cape Henry; but no british frigate was there. The commodore now stood slowly to the north-east, expecting every moment to discover the object of his pursuit. The 15th passed without any occurrence; but on the 16th, at about 25 minutes past meridian, Cape Henry bearing south-west distant 14 or 15 leagues, the wind a moderate breeze from the northward, the President, from her mast-head, discovered a vessel in the east quarter, standing towards her under a press of sail.

Preparations in expectation of meeting the *Guerrière*.

The vessel thus descried was the british ship-sloop *Little-Belt*, captain Arthur Batt Bingham, mounting 18 carronades, 32-pounders, and two nines, with 121 men and boys, on her return to the southward from off Sandy-Hook; where she had been seeking the *Guerrière*, for whom she bore despatches from the commander in chief at Bermuda, rear-admiral Sawyer. The *Little-Belt* had discovered the President since about noon, and considering her suspicious, had hauled up on the starboard tack in

President falls in with *Little-Belt*.

1811. chase. Captain Bingham, in his letter, says, it was
 May. "eleven" when he descried the President; the Little-Belt's log says, "half past." Even the latest of these times would, according to the letter of commodore Rodgers, make it 40 minutes after the Little-Belt had descried the President before the latter discovered her: a circumstance not very probable; although it does appear, that the american ship did not keep the best look-out; otherwise, when first seen by the President, the Little-Belt would have been steering south, instead of towards the President, or north by west, a deviation from her course caused solely by the latter's appearance. We have therefore, as on other occasions, paid less attention to the absolute, than to the relative time.

At 1 h. 30 m. P.M. each ship, the two then about 10 miles apart, supposed the other to be a vessel of war. The President thereupon hoisted her ensign and commodore's pendant, and edged away, as if to meet the Little-Belt. The latter, about the same time, made her number, along with the customary signal, (No. 275,) calling upon the stranger, if a british ship of war, to show hers. The non-compliance with this signal indicating that the President was, what by her colours she appeared to be, an american frigate, the Little-Belt, at 1 h. 45 m. P.M., hoisted her colours, wore, and resumed her course to the southward under all sail. "Being," as commodore Rodgers says, "desirous of speaking her, and of ascertaining what she was," the President crowded sail in chase. Observing this, the Little-Belt made the private signal. Finding it unanswered, captain Bingham felt assured that the stranger, notwithstanding her persisting to chase, was an american frigate, and therefore, hauling down both ensign and signal, continued his course round Cape Hatteras.

President

 her.

Little-
 Belt
 lies to.

Although the wind, since 1 P.M., had been gradually falling, the superior sailing of the President brought her, by 6 h. 30 m. P.M., so near to the Little-Belt, that captain Bingham, wishing before dark

to remove all remaining doubts on either side, shortened sail, rehoisted his colours, and hove to on the larboard tack. 1811.
May.

To avoid being taken by surprise, the Little-Belt double-shotted her guns, and got all clear for action. Clears
for
action. The President, by the manner of her approach, appearing as if she intended to take a raking position, the Little-Belt, to frustrate that design, wore three times. This brought the latter upon the starboard tack; and at a few minutes past 8 P.M., when the two ships were about 90 yards apart, captain Bingham hailed the President in the customary manner, but received no answer, probably because he was not heard. The President still advancing, as if desirous to pass astern of the Little-Belt, the latter wore a fourth time, and came to on the larboard tack. The President now hauled her foresail up, and also hove to on the larboard tack, distant about 80 yards from the sloop's weather-beam. Captain Bingham, standing on the gun abaft the larboard gangway, hailed, "Ship a hoy!" Capt.
Bing-
ham
hails. "Ship a hoy!" was repeated from the neutral frigate. "What ship is that?" asked captain Bingham. "What ship is that?" repeated commodore Rodgers. At this instant a gun was fired, let us for the present say, by each ship; and, let us also say, that both guns went off by accident. A gun-
is fired
by ac-
cident.

Each ship believing the other to have fired first, and that intentionally, and neither being disposed to brook the slightest insult, the two began a furious engagement; which lasted, including an intermission of a few minutes, about half an hour.* The Little-Belt, owing to the loss of her after-sail and the damaged state of her rigging, having fallen off, so that no gun would bear, ceased firing; and the President, finding that to be the case, did the same. Shortly afterwards commodore Rodgers, hailing the Little-Belt, learnt, what he and his officers must The

1811. have known before, that she was a british ship,
 May. but did not, it appears, hear her name; and, to a question, desiring to know if his antagonist had struck, was answered by captain Bingham in the negative. The latter then asked the name of the american frigate; but the same cause, the increased freshness of the wind, that had prevented the commodore from hearing the whole of the answer to his question, kept captain Bingham in ignorance of the name, though not of the nation, of the ship by which the Little-Belt had been so battered and ill-used.

Da- The damages of the Little-Belt were indeed, as
 mage might be expected, of a very serious description.
 and The greater part of her standing and the whole of her
 loss to running rigging were cut to pieces: not a brace nor
 Little- a bowline was left. Her masts and yards were all
 Belt. badly wounded, and her gaff was shot away. Her upperworks were completely riddled, and her hull in general much struck: several shot were sticking in her side, and some had entered between wind and water. Nothing, we conceive, but the lowness of her hull in the water, and the consequent difficulty of hitting it, prevented the sloop from being sunk. The loss on board the Little-Belt bore a proportion to her damage: she had one midshipman, (Samuel Woodward,) seven seamen, and one marine killed, two seamen mortally, her acting master, (James M'Queen,) seven seamen, one boy, and two marines severely, and her boatswain, (James Franklin,) five seamen, two boys, and two marines slightly wounded; total, 11 killed and mortally wounded, and 21 wounded severely and slightly. The President appears to have had her sails and rigging slightly injured, and to have received one 32-pound shot in her foremast and another in her mainmast: her loss is also represented not to have exceeded one boy wounded.

Both After the action the President wore, and, running
 ships a short distance to-leeward of the Little-Belt, came
 lie to on the starboard tack, to repair her trifling
 tillday-
 light.

damages. This done, the frigate filled and lay to on different tacks, in order to wait until daylight should afford the commodore a clear view of what his prowess had effected. The Little-Belt brought to on the larboard tack, and commenced her more serious occupation of repairing damages and stopping leaks. During the night the sloop's topgallantmasts were got on deck, and the cut rigging partially repaired.

At daylight on the 17th the President, now about nine miles to-windward, bore up under topsails and foresail, and, to all appearance, ready to renew the action. At 8 A. M. the american frigate passed within hail, and the commodore said: "Ship a-hoy! I'll send a boat on board, if you please, sir."—"Very well, sir," was captain Bingham's reply. The boat came, under the command of the first lieutenant John Orde Creighton, with a message from the commodore, to the effect, that he lamented much "the unfortunate affair," and that, had he known the british ship's force was so inferior, he would not have fired into her. On being asked why he had fired at all, the lieutenant replied, that the Little-Belt had fired first. This was most positively denied on the part of captain Bingham. Lieutenant Creighton, in the name of the commodore, then offered every assistance, and suggested that captain Bingham had better put into one of the ports of the United States. This the latter declined. The boat returned. The President made sail to the westward, and the Little-Belt, as soon as she was able, to the northward. On the 23d the latter was joined by the Gorée, captain Byng, and on the 28th the two vessels anchored in Halifax harbour.

In discussing the merits of the action between the Little-Belt and President, we shall consider it in the double light of an attack by a neutral upon a belligerent, and an engagement between an american frigate and a british sloop of war. We shall begin by freely admitting, that the act of the Guerrière, in pressing a native american citizen out of an american

1811. coaster, in the very mouth of an american port,
 May. was an act unjustifiable, unnecessary, and impolitic;
 and that this wanton encroachment upon neutral
 rights, coupled with many others which had been
 practised along the same coast, was a sufficient
 ground for the government of the United States to
 take every measure, short of actual war, for protect-
 ing their commerce and citizens from a repetition of
 such acts of violence.

Presi- Well, the american frigate sails forth, in diplo-
 dent- matic language, "to protect the coast and commerce
 intend- of the United States," but, in reality, to speak the
 ed to force her to restore the man. british frigate *Guerrière*, to demand from her the
 american citizen whom she had impressed, and, in
 case of refusal, to endeavour to take that american
 citizen by force of arms. We must suppose that a
 refusal was anticipated; or why were such pre-
 parations made? why such quantities of ammunition
 brought upon deck; and why did the commodore, as the
 President was descending the bay, so significantly
 question his people as to their readiness for action?

Extra- A ship is descried, a man of war, "from the sym-
 ordina- metry of her upper sails" and her making signals,*
 ry de- and the british frigate *Guerrière*, as is scarcely
 lusion as to the cha- less doubted, from her proximity to the coast, and
 racter of the Little-Belt. because the mind of almost every person on board is
 so fully engrossed with the idea of that frigate, as
 to be incapable of bestowing a thought upon any
 other. Chase is given. The ships approximate, so
 that the upper part of the Little-Belt's stern shows
 itself to those on board the President.† Still the de-
 lusion continues. As evening approaches, the british
 sloop discovers her broadside. "Nevertheless," says
 the commodore, "her appearance indicated she was a
 frigate." Had the Little-Belt been a deep-waisted
 or frigate-built ship, such a mistake might have
 happened; but she was a low flush vessel, similar
 in size, number of ports, and general appearance, to

* Official letter of commodore Rodgers.

† Ibid.

the american sloop Hornet. The ships mutually approach within hailing distance. Captain Bingham hails, let us admit, without being heard. Commodore Rodgers hails, and is hailed back. "Having," he says, "asked the first question, I of course considered myself entitled, by the common rules of politeness, to the first answer: after a pause of 15 or 20 seconds, I reiterated my first inquiry of 'What ship is that?'" 1811.
May.

Let us also pause; and, leaving "the rules of politeness" to serve the commodore on some other occasion, examine upon what more stable ground he claims the privilege of being first answered. The President was a neutral, the Little-Belt a belligerent ship: one was at peace with all the world, the other at war with the greater part of it. The belligerent vessel has an unquestionable right to conceal her condition, to wear false colours, give a false answer, or no answer at all; in short, to practise every artifice to deceive or mislead her supposed enemy; and she is to take every ship she meets as an enemy, until the contrary be shown. A neutral vessel, on the other hand, armed or unarmed, has no motive, and therefore no right, to practise deception: she is bound to observe common civility, if not "politeness," to every ship she meets; and, when questioned as to her name or national character, is bound to give it with frankness, because she has nothing to dread from the most ample disclosure of her situation. Hence commodore Rodgers, waving the law of politeness, should have conformed to the law of nations, and have answered captain Bingham's hail, although under the impression that he himself had asked the first question. But, in truth, the american frigate at this moment was, to all intents and purposes, a ship of war: she was not only armed, but prepared, for battle, and was resolved to have a battle with the ship, the little ship, that now so opportunely lay under her guns. Little-Belt had no right to answer hail.

President ought to have done so.

From the numerous contradictions and cross

1811. swearings that have grown out of this case, it has hitherto been a disputed point who fired the first shot. May. Having, however, learnt by experience, not to place Court of inquiry on American officers. implicit reliance in all that an American says or swears, we shall not let the subject pass without such a scrutiny, as may satisfy the minds of some, although it may not remove the doubts of all. The principal officers examined upon oath, at the court of inquiry held upon commodore Rodgers, were the acting captain, three out of the five lieutenants, two officers of marines, the master, and the chaplain. Captain Ludlow is "uncertain which fired the first gun, but the second gun was from the President." The first lieutenant believes the first shot was fired from the Little-Belt. The second lieutenant is sure it was; and so swears the junior lieutenant. Both officers of marines and the master depose to the same effect. The chaplain thinks the gun came from the Little-Belt, as he felt no jar in the President. With respect to the second gun, or that admitted to have been fired by the President, the lieutenant of marines swears it went off "in six seconds," and the master "in three or four seconds," after the first, or Little-Belt's gun.

Reason for considering that President fired the first gun. So that the two guns were fired within, taking the lowest estimate, three seconds of each other. Might not the guns have been fired at the same instant? In short, might there not have been one gun, and one gun only fired? If so, that must have been the President's gun, because one of her guns is admitted to have gone off by accident; while the most positive denial exists as to the occurrence of any accident of the kind on board the Little-Belt. Moreover the captain, two lieutenants, master, and surgeon of the latter have solemnly declared, that the first gun was fired from the President. In this they are borne out by two British seamen, who, in company, as they say, with nearly 300 more, were on board the President during the action; and who, fearing a rupture with their native country, deserted from the

frigate soon after she arrived at New-York, and 1811.
 proceeded to Halifax, Nova-Scotia. One of these ^{May.}
 men, William Burnet, swears that he was stationed
 at the second division of guns on the main deck;
 that, while the commodore was hailing the second
 time, a gun in his division went off, he thinks by
 accident; that he was then looking at the Little-
 Belt through one of the ports, and is positive that
 she did not fire. The other man, John Russell,
 corroborates his shipmate's testimony, and adds,
 that a man got entangled in the lanyard of the lock
 and thus occasioned the gun to go off. Burnet
 swears also, that lieutenant Belding, who commanded
 in his division, knew and declared that the President
 fired the first shot, and, just before dark, saw with
 his glass, and observed to him, that the Little-Belt's
 colours were british. Burnet states likewise, that
 the ship was a small ship. It is therefore easy to
 conjecture, why lieutenant Belding was not sum-
 moned to give his evidence at the court of inquiry:
 perhaps the other absent lieutenant might have been
 equally unfit for a witness in the commodore's cause.

Not a doubt, therefore, remains upon our mind, ^{Both parties too precipitate.}
 that the first gun was fired, unintentionally we
 admit, by the american frigate; and, had the british
 sloop immediately opened her fire in return, being
 satisfied at the time that it was a neutral man of
 war she was engaging, we should have no hesitation
 in saying, that captain Bingham acted with precipita-
 tion: that he ought to have repeated his hail, or sent
 an officer on board, to demand an explanation. As
 it was, however, both parties appear to have given a
 simultaneous vent to their fury; one, as lieutenant
 Creighton swears captain Bingham informed him,
 on the supposition that he was defending himself
 against an avowed enemy; the other, according to
 the american version of the proceeding, with the
 intention of chastising the insolence of a pretended
 friend.

In awarding this "chastisement," commodore Rodgers

1811. tells us, he was governed by "motives of humanity and
 May. a determination not to spill a drop of blood unnecessarily;" and yet his own captain swears, that the
 Con- commodore's orders were "to fire low and with two
 duct of round shot." His subordinate officers and men,
 com- emulous to please, fired low enough, and loaded their
 mo- guns, not only with round and grape shot, but with
 dore "every scrap of iron that could possibly be collected."
 Rod- The consequences of this humane and magnanimous
 gers. conduct on the part of, in the words of an american
 editor, "one of the largest 44s that ever floated,"
 against a ship, that was considerably less than one
 third of her size, and not one fourth equal to her
 in point of force, have already been detailed.

True it is, that one of the President's officers has
 sworn, that he "thought the Belt a heavy frigate
 until next day," and another, that he "took her for
 a frigate of 36 or 38 guns." The commodore, too,
 confesses himself to have been similarly deceived.

What must have been the astonishment of all
 these swearers, when "the next day" discovered their
 late antagonist to be a ship scarcely exceeding in
 length the space between the President's bows
 and her gangway ladder, and whose topmast
 heads ranged very little higher than their ship's
 lower yard-arms. That such a mistake should
 have happened seems unaccountable; especially
 when there was light enough for captain Ludlow to
 see that his opponent's "gaff was down, and her
 maintopsail yard on the cap," and when the distance
 between the two ships is admitted not to have
 exceeded 70 or 80 yards. However, the american
 commodore, in all he said was believed, and for all
 he had done was commended, in the quarter to which
 alone, beside his conscience, and that probably was
 not an over-squeamish one, he considered himself
 responsible. On the other hand, the captain, officers
 and men of the Little-Belt, for the spirit and firmness
 they had manifested throughout the whole of
 unequal contest, which, according to our contempora-

Singular mistake respecting the size and force of the Little-Belt.

"it was the misfortune of captain Bingham" to be engaged in,* were greeted with applause by every generous mind, some in America not excepted; and on the 7th of February, 1812, as a proof that the lords of the admiralty were far from displeased with his conduct, captain Bingham was promoted to post-rank.

1811.

Feb.

Pro-
motion
of capt.
Bing-
ham.

On the 2d of February, at 5 P.M., the three french 40-gun frigates *Renommée*, commodore François Roquebert, and *Clorinde* and *Néréide*, captains Jacques Saint-Cricq and Jean-François Lemaesquier, sailed from Brest, each having on board 200 troops and a supply of munitions of war, bound, in the first instance, to the Isle of France; the capture of which, in the preceding December, was of course unknown, although as a contingency provided against, by the port of Batavia's being named for the succedaneous destination. Bad weather nearly separated the frigates the first night; and a continuance of contrary winds occasioned the squadron to be 18 days going the first 200 leagues of the voyage. On the 24th of February, by some Lisbon newspapers found on board a portuguese ship, the french commodore gained intelligence, that an attack was intended, and had perhaps already been made, upon the island to which he was first destined. The favourable change in the wind was taken immediate advantage of, and all sail crowded upon the three ships. On the 13th of March the frigates crossed the line; on the 18th of April, in latitude 38°, doubled the Cape of Good Hope; and on the 6th of May, at 11 P.M., being the ninety-third day since their departure from Brest, arrived within five miles of Isle de la Passe, situated, as already known, at the entrance of Grand-Port, or Port-Sud-Est. Soon after midnight a boat from each frigate was despatched to the shore, to gain intelligence.

1811. *Isle de la Passe* were french; but they were unaccompanied by the private signals. This gave the first serious alarm to commodore Roquebert and his companions. At sunrise five sail successively hove in sight to leeward; and about the same time was observed, at *Isle de la Passe* and along the coast, the signal of three french frigates being to-windward: a signal fully understood by the latter, as being made according to the code in use at the island previously to its surrender.

May. *possession of the British* Two of the five sail thus seen were unarmed vessels, probably coasters; but the remaining three were the british 18-pounder 36-gun frigates *Phœbe* and *Galatea*, captains James Hillyar and Woodley Losack, and 18-gun brig-sloop *Racehorse*, captain James De Rippe, part of a squadron which had been ordered by rear-admiral the honourable Robert Stopford, the commander in chief on the Cape station, to cruise off the *Isle of France*, to endeavour to intercept these very frigates, and two others, in all probability, the new 40-gun frigates *Nymphe* and *Méduse*, from *Nantes*, of whose expected arrival intelligence had been received. The british ships were presently under all sail upon a wind in chase; the *Galatea's* gig, with the intelligence, having previously been despatched to captain Charles Marsh Schomberg, of the 18-pounder 36-gun frigate *Astrea*, lying in *Port-Louis*.

British squadron discovers french squadron. In the course of the forenoon the *Renommée's* boat returned on board, with information of what had befallen the colony; the details of which were communicated by two negroes whom the boat had brought off. The boats of the *Clorinde* and *Néréide* appear to have been captured. The three french frigates now tacked and stood to the eastward, followed by the two british frigates and brig-sloop. At 3 p.m. the French hoisted their colours, and the British soon afterwards did the same. At sunset the french squadron bore south-east of the british, distant about three leagues, the wind a moderate breeze from the same quarter.

Proceeds in chase.

On the 8th, at 4 A. M., the distance between the two hostile squadrons was diminished to six or seven miles; and at 8 A. M. the french frigates bore up, and, with a light air of wind, stood towards the *Phoebe* and *Galatea*. These, along with the *Racehorse*, shortly afterwards wore and steered to the westward, in the direction of *Isle Ronde*, then distant five or six leagues. Wishing, with the odds against him, to have a commanding breeze to manœuvre with, and expecting every moment to be joined by the *Astrea* from Port-Louis, captain Hillyar rather avoided than sought an engagement; and towards evening, when the two squadrons were scarcely five miles apart, commodore Roquebert, considering it, as he states, unsafe to follow the british ships into the current that runs between *Isle Ronde* and *Isle Serpent*, discontinued the chase and hauled up to the eastward.

consent

On the 9th, at daylight, the two squadrons regained a distant sight of each other; but, the *Phoebe* and *Galatea* bearing up about noon to join the *Astrea*, the french ships disappeared. The three british frigates then steered for Port-Louis, and on the 12th came to anchor off the harbour. It appears that, at one period, while the two squadrons, before the junction of the *Astrea*, were in the presence of each other, the ship's company of the *Galatea* went aft and requested their captain to bring the enemy to action. In order to concert with his senior officer upon that or some other subject, captain Losack went on board the *Phoebe*; and, on his return, the crew of the *Galatea*, supposing their wishes were about to be gratified, gave him three cheers.

crew.

Commodore Roquebert reduced the crews of his ships to two-thirds allowance of provisions, and resolved to attempt a surprise upon some post on the windward side of *Isle Bourbon*. Having, by the 11th, passed 20 leagues to-windward of the *Isle of France*, the three french frigates bore up for *Isle Bourbon*, and on the same night made the land. The boats of the squadron, having on board a division of

tave*.

1811. the troops, attempted to disembark at a post that
 May. was known to be weakly manned, but were prevented
 by the heavy surf. Thus disappointed, the french
 commodore stood across to the coast of Madagascar,
 to endeavour to obtain a supply of provisions. On the
 19th the ships made the isle of Prunes, and the same
 evening surprised the small settlement of Tamatave,
 in Madagascar; the garrison of which consisted of
 about 100 officers and men of the 22d regiment, and,
 except a small proportion, were sick with the ende-
 mial fever of the country. This settlement had been
 taken from the French on the 12th of the preceding
 February, by the above detachment of british troops,
 sent thither by Mr. Farquhar, the governor of the
 Isle of France, in the 18-gun brig-sloop Eclipse,
 captain William Jones Lye.

Is fall- On the 20th, at daybreak, captain Schomberg,
 en in with his three frigates and brig-sloop, and who, very
 with by captain judiciously, had sailed from Port-Louis on the
 Schom- 14th direct for this spot, discovered himself to M.
 berg. Roquebert; then, with his three frigates, close to
 the land near Foul point, and directly to-windward
 of the former. The british ships immediately made
 all sail in chase, with a light breeze from off the
 land, or from the west by north; but the french ships
 continued lying to, to await the return of two of
 their boats from Tamatave. The Renommée's boat
 at length came off; and at noon the french com-
 modore formed his three frigates in line of battle,
 placing the Renommée in the centre, the Clorinde
 ahead, and the Néréide astern. The British, in the
 mean while, were closing their opponents as fast as
 the light and variable winds would permit, formed in
 the following order: Astrea, Phœbe, Galatea, in
 line ahead, and the Racehorse nearly abreast of the
 Phœbe, or centre-ship, to-leeward.

Action At 3 h. 50 m. P. M. the french frigates, being on the
 com- larboard tack, wore together, and, after keeping away
 mences for a short time, hauled up again on the same tack.
 The british ships were now approaching on the

opposite or starboard tack; and, as soon as the Astrea, ^{1811.} who was considerably ahead of her second astern, had arrived abreast of the Renommée, the latter opened her fire at long range. At a few minutes before 4 P. M. the Astrea returned this fire; as did also the Phœbe and Galatea, as they advanced in succession. Thus:

Having passed out of gun-shot astern of the Néréide, the Astrea prepared to tack and renew the action; but, as was to have been expected so near to the land, particularly Madagascar, the cannonade produced an almost instantaneous calm to-leeward. Having, in consequence, missed stays, the Astrea attempted to wear, and had scarcely accomplished that, ere there was an entire cessation of the breeze. From their weatherly position, the french ships of course felt its influence the longest; and the breeze did not quite leave them until the Clorinde and Renommée had bore up and stationed themselves, in a most destructive position, across the starboard quarters and sterns of the Phœbe and Galatea. Now was the time for the Racehorse, with her facility of sweeping, to have distinguished herself, by taking a position close athwart the hawse of the

Ships
be-
calmed

1811. *Néréide*, between whom and the *Astrea* a distant and partial cannonade was maintained. The *Racehorse* did begin sweeping, but stopped to engage long before her shot could reach the french frigate; and, in consequence, the *Astrea* made the brig's signal to engage more closely, and, as it was never answered, kept it flying. Owing to the leeward position of the *Galatea*, and the efforts of the *Phœbe*, by backing her sails, to support her consort, these two ships lay nearly abreast of each other, in the manner represented in the following diagram:

Phœbe
closes
Néré-
ide.

On the starboard quarter of the *Phœbe* lay the *Renommée*, and on her starboard bow the *Néréide*; who had just cleared herself from the *Astrea* and *Racehorse*, then upwards of a mile and a half ahead of their two consorts, and like them in an ungovernable state for the want of wind. At 6 h. 30 m. P. M. a light air from the south-east enabled the *Phœbe*, who had hitherto been able only to bring her bow guns to bear on the *Néréide* and her quarter ones on the *Renommée*, as the swell hove her off and brought her to, to close the *Néréide* in a raking position; and whom, at the end of 25 minutes, the *Phœbe* completely silenced, but was then obliged to quit, as the *Renommée* and *Clorinde* were fast approaching to the support of their nearly overpowered consort.

These two frigates, in the mean time, having kept their broadsides to bear by the aid of their boats, had

terribly battered the Galatea. The cutter of the latter having been cut adrift by a shot while towing astern, the jollyboat was got ready to tow the ship's head round; but a shot sank her just as the tow-rope was being handed on board, and, scarcely were the tackles got up to hoist out a third boat, when a shot carried away the foreyard tackle. Some seamen now got sweeps out of the head; and at length the Galatea was enabled to open her broadside upon her two antagonists, particularly upon the Renommée, who received the greater portion of her fire. About this time, as already mentioned, a light breeze sprang up; and, while the Renommée and Clorinde made sail to support the Néréide, the Galatea, with her masts much wounded, and her hull greatly shattered, hauled towards the Astrea and Racehorse, and at 8 P. M. ceased firing. At 8 h. 30 m. P. M., just as the Galatea, under a press of sail, was passing to-leeward of the Astrea, and captain Losack had hailed captain Schomberg, to say that his ship had suffered considerably, the Galatea's fore topmast fell over the larboard bow and the mizen topmast upon the main yard. Having at this time three feet 10 inches water in the hold, her foremast, main yard, main topmast, and bowsprit badly wounded, and her rigging of every sort cut to pieces, the Galatea hailed the Racehorse for assistance, and captain De Rippe sent on board a midshipman and 10 men. Captain Losack then made the night-signal of distress to the commodore. The Astrea immediately closed the Galatea; and, hailing, was informed, that the latter was in too disabled a state to put her head towards the enemy and renew the action.

The Astrea then wore round on the larboard tack; and captain Schomberg ordered the Racehorse to follow him closely, as he intended to renew the action as soon as the Phœbe was in a state to give her support. This frigate was promptly reported ready; and at about 8 h. 25 m. P. M. the Astrea, Phœbe, and Racehorse bore up towards the enemy,

 May. It appears that, after the *Renommée* and *Clorinde* had obliged the *Phœbe* to quit the *Néréide*, the latter, on account of her disabled state, was ordered by the commodore to make for the land; while the *Renommée*, followed by her remaining consort, hauled up in line of battle to renew the engagement. Shortly afterwards the *Clorinde* lost a man overboard, and, in bringing to to pick him up, necessarily dropped astern of her leader. Captain Roquebert, however, in the most gallant manner, stood on his course, and at 9 h. 50 m. P. M. came to close action with the *Astrea*, whom, with a heavy fire of round, grape, and musketry, the *Renommée* attempted to lay athwart hawse; but, aware of the numerical superiority of her opponent, the *Astrea* avoided coming in contact. After an animated cannonade of about 25 minutes, during which the *Phœbe* fired a few raking shot at the *Renommée*, and the *Racehorse* discharged a whole broadside directly between the masts of the *Astrea*, and set her mainsail on fire, the french ship made the signal of surrender. Captain Hillyar now ordered the *Racehorse* to take possession of the *Renommée*; but the brig, just at this moment losing her fore topmast from a wound it had received, was unable to do so. Captain Schomberg then sent on board the prize, in a sinking boat, lieutenant Charles Royer,* lieutenant of marines John Drury, and five seamen; and the *Astrea* and *Phœbe* made all sail after the *Clorinde*, who had shamefully kept aloof during her commodore's gallant action, and was now under a press of canvass on the larboard tack, endeavouring to effect her escape.

of that
frigate.

Captain Schomberg says: "Another frigate, on closing, struck, and made the signal also; but, on a shot being fired at her from her late commodore, she was observed trying to escape;" and, in another place, "The ship that struck and escaped was La

* Called Rogers in the gazette-letter.

Clorinde." Nothing of this appears in the french 1811. accounts. On the contrary, the complaint there is, ^{May.} that the Clorinde avoided closing. If we are of opinion that the french ship did not surrender, it is not because the french captain has said so, but because we cannot discover that the Clorinde was so pressed, as to render such a step necessary. That will be more apparent, when we come to state her loss. Moreover it was dark; and our experience in investigating accounts has taught us, that mistakes of the kind are frequently made, even where the action is fought in broad daylight. The chase of the Clorinde was continued until 2 A. M. on the 21st; when, finding that, on account of the perfect state of her rigging and sails, the Clorinde gained considerably on the Astrea and Phœbe, the two latter wore, to cover the captured ship, and form a junction with the Galatea. At this moment the fore topmast of the Phœbe, from the wounds it had received, fell over the side.

Clo-
rinde
escapes
and
Astrea
and
Phœbe
discon-
tinues
the
chase.

The principal damages of the Astrea were in her sails and rigging, and they were not material. Out of her complement, (admitting all to have been on board, which we rather think was not the case,) of 271 men and boys, she had two seamen killed, her first lieutenant, (John Baldwin,) 11 seamen, three marines, and one boy wounded; total, two killed and 16 wounded. The Phœbe, besides the loss of her fore topmast, had her three masts and bowsprit badly wounded, her sails and rigging much cut, and her hull struck in several places; and her loss, out of a complement the same as the Astrea's, consisted of seven seamen killed, one midshipman, (John Wilkey, severely,) 21 seamen, (one mortally and nine severely,) and two marines wounded; total, seven killed and 24 wounded. The disabled state of the Galatea's masts and rigging has already been described. The ship had 55 shot-holes in her hull, 29 on the starboard and 26 on the larboard side; and her stern was also much shattered. Her loss,

Da-
mage,
&c. on
british
side.

1811. out of a complement the same as that of either of
 May. her consorts, was her first lieutenant of marines, (Hugh Peregrine,) eight seamen, and five private marines killed, her captain with a lacerated wound by a splinter, but his name does not appear in the official return, second lieutenant of marines, (Henry Lewis,) 14 seamen, (two mortally,) five private marines, severely, and her first lieutenant, (Thomas Bevis,) two midshipmen, (Henry Williams and Alexander Henning,) 17 seamen, four private marines, and three boys slightly wounded; total, 16 killed and 46 wounded. The Racehorse, notwithstanding that some chance shot had knocked away her fore topmast, appears to have escaped without any loss.

Loss on
 french
 side.

With respect to the french ships, the *Renommée*, according to the french official account, sustained a loss, out of a complement, including troops, of 470 officers and men, of 93 killed and wounded. Among the former, was her gallant captain, M. Roquebert, and among the severely wounded, colonel Barrois, the senior officer of the troops; also her first lieutenant, Louis-Auguste Defredot-Duplanty, who only went below to have his wound dressed, and fought the ship in the bravest manner. The *Néréide*, upon the same authority, had her captain and 24 seamen, marines, and soldiers killed, and 32 wounded; and the *Clorinde*, occasioned probably by the fire of the *Galatea* when the latter got her broadside to bear, had one man killed and six wounded. The british official account states the killed and wounded of the *Renommée* at 145, and that of the *Néréide* at 130.

Relative
 force
 of the
 parties.

The relative force of the parties in this contest requires a few observations. The three british frigates were all of the same class, and of nearly the same size, the *Astrea* measuring 956, the *Phœbe* 926, and the *Galatea* 945 tons. The fore-castle and quarter-deck establishment of the *Astrea* and *Galatea* was, 14 carronades, 32-pounders, and two 101 nines, making the total number of guns 42. The

Phœbe appears to have mounted two more nines, making her number of guns 44. The complements have already been enumerated. With respect to the Renommée, Néréide, and Clorinde, they were not quite so formidable as some of the french frigates which have been named in these pages. When it is known, that the french 36-pounder carronade weighs seven per centum more than the english 42, it will be readily conceived, that 10 or 12 of the former were too much for the quarterdeck of a french frigate of 1080 or 1100 tons; especially, in the usual contracted state of that deck and the comparative flimsiness of its barricade. It appears, therefore, that in the year 1810 the establishment of the french 40-gun frigate was altered, from twelve 36-pounder carronades and four or six eights, to fourteen 24-pounder carronades and two eights; and even the french 24-pounder carronade weighs within about 120 pounds of the english 32, and so nearly agrees with the latter in size, as to be easily taken for a carronade of that caliber. According to this statement of the guns on each side, the broadside force of either the Astrea or Galatea was 467 lbs., and that of any one of the three french frigates 461 lbs. The complements of either of the latter, even without the troops, far outnumbered that of either of the three british frigates. In point of size, the french frigates had also the advantage; the Renommée measuring 1073, the Clorinde 1083, and the Néréide 1114 tons.

1811.
May.

New
carron-
ade
esta-
blish-
ment
upon
french
frigates.

The difference in guns, men, and size, therefore, between a british 18-pounder 36 and a french 40 gun frigate, rendered the parties in this action, notwithstanding the presence of the brig, who, it is clear, might as well have been in Port-Louis harbour, about equally matched; that is, making due allowance for the side which possessed the inferiority in number of men. Had the Renommée not have been somewhat roughly handled by the Galatea, and had the Clorinde, when the Renommée was attacked by

Re-
marks
on the
action.

1811. the *Astrea* and *Phœbe*, given to the former the support that was in her power, the french commodore's ship, in all probability, would have effected her escape; and that without the slightest disparagement to the *Astrea*. The resolute conduct of the *Néréide*, in not surrendering to the *Phœbe* after having sustained so heavy a loss in killed and wounded, redeems, in some degree, the previous shyness, on two occasions, of captain Lemareshquier;* unless we are to consider that, as he fell in the action, the credit of not striking the colours is due to the next officer in command, lieutenant François Ponée. With respect to the *Clorinde*, the behaviour of her captain on the present, perfectly agrees with his behaviour on a former occasion. M. Saint-Cricq abandoned his commodore in March, 1806;† he does the same in May, 1811: then his heels could not save him; now they do save him. Upon the whole, if some glory was lost to the french navy by the misconduct of the *Clorinde*, more was gained to it by the acknowledged good conduct of the *Renommée* and *Néréide*.

Alleged
reason
of *Ga-
tea* not
rejoin-
ing her
con-
sorts.

On the 21st, at daylight, the *Astrea*, *Phœbe*, and *Racehorse* discovered the *Renommée* and *Galatea* to-windward; and their bearings, as taken on board the *Racehorse*, were, *Galatea* south-west by south, *Renommée* south-west by west. A very singular circumstance appears to have prevented the *Galatea* from joining her three consorts to-leeward. It will be remembered, that only two officers and five men were sent to take possession of the *Renommée*, who had then a crew of nearly 400 effective officers and men. In this state of things, the surprise is, that the French did not retake their ship. It appears that the crew wished to do so; but that colonel Barré who, according to the etiquette of the french servi was now the commanding officer, acting upon principle of honour which some of the french captains would do well to imitate, refused to g

* See vol. v. pp. 114, 333.

† See vol. iv. p. 325.

his sanction to the proceeding. Hence lieutenant 1811.
 Rover and his few hands remained throughout the May.
 night in quiet possession of the prize; but were not
 permitted, when daylight came, to hoist the english
 over the french flag, nor to make any signal, either
 to the Galatea who was to-windward, or to the
 Astrea and her consorts, who were at a great
 distance to-leeward of them. Not knowing, of
 course, that the Renommée had been captured, and
 getting no answer to his signals, from this ship for
 the reason already stated, nor from the Astrea and
 Phœbe because of their great distance off, captain
 Losack doubted if it was not the french squadron of
 which he was in sight; and, while the Renommée
 bore up to join the Astrea and Phœbe, the Galatea
 made the best of her way to Port-Louis.

Having taken out the prisoners from the Renom- Capt.
 mée, and placed on board a proper prize-crew, Schom-
 berg now first learnt the situation of detach-
 Tamatave. The damaged state of the Phœbe not es
 admitting her to beat up quickly against the wind Race-
 and current, captain Schomberg despatched the horse
 to Ta-
 Racehorse in advance, to summon the french gar- matave
 rison to surrender. On the evening of the 24th
 the brig rejoined the Astrea, with the intelligence
 of the arrival of the Néréide at Tamatave. As this
 was the nearest port in which he could get his ship
 repaired, lieutenant Ponée had proceeded straight
 thither, and immediately moored the Néréide in the
 most advantageous manner for resisting the attack
 which he hourly expected to be made.

The Astrea, Phœbe, and Racehorse immediately Sails
 made sail for Tamatave, but were prevented by a there
 strong gale from getting a sight of the french frigate, himself
 until the afternoon of the 25th; when, no one in the in
 british squadron possessing any local knowledge of search
 of Né-
 the spot, and it being considered impracticable to réide.
 sound the passage between the reefs without being
 exposed to the fire of the frigate and a battery
 of 10 or 12 guns, captain Schomberg sent captain

1811. De Rippe, with a flag of truce at his brig's mast-head, and a summons of surrender to the french commanding officer. In that summons the latter is informed, that the "Renommée and Clorinde have struck after a brave defence." The inference here intended is pretty clear, and a ruse may be allowed in such cases; but an officer should be cautious how he signs his name to a document bearing upon the face of it what may afterwards subject his veracity to be called in question.

May. Summons her to surrender. Lieut. Ponée obtains terms and Né-réide surrenders. Lieutenant Ponée, like a brave man, refused to surrender unconditionally; but proposed to deliver up the frigate and fort to the British, on condition that he, his officers, and ship's company, and the troops in garrison on shore, should be sent to France, without being considered as prisoners of war. The terms were agreed to; and on the 26th the fort of Tamatave and its dependencies, the frigate and a vessel or two in the port, were taken possession of by captain Schomberg; who, having first, as a precautionary measure on account of the number of prisoners in the two frigates, caused the guns on the battery to be spiked, went into Tamatave with his squadron.

Clo-rinde sails for Europe Having thus disposed of two of M. Roquebert's three frigates, we will endeavour to show what became of the other. Captain Saint-Cricq made so good a use of the entire state of the Clorinde's rigging and sails, that by daylight on the 21st he had run completely out of sight of both friends and foes. After ruminating awhile on his "melancholy" situation, the french captain bent his course towards the Seychelle islands; under one of which he anchored, and on the 7th of June set sail on his return to France. On the 26th the Clorinde reached the island of Diego-Garcia; and, having obtained some cocoas and a supply of wood and water, sailed thence on the 28th, and on the 1st of August rounded the Cape of Good Hope. Between the 23d of August and 16th of September, captain Saint-Cricq fell in

with several english and american provision-laden merchant vessels, and from among them supplied the principal part of his wants. 1811.
Aug.

On the 24th, when close to the port of her destination, the *Clorinde* was very near sharing the fate of her late consorts. At daylight she was discovered and chased by the british 80-gun ship *Tonnant*, captain sir John Gore; who ineffectually endeavoured to cut her off from entering the passage du Raz. At noon the *Tonnant* fired a shot at the *Clorinde*; and at about 1 h. 30 m. p. m., when the *Saintes* islands bore north-east by north four miles, discharged her broadside. The british 80 continued the chase, in a fresh gale at north-west and heavy sea, and passed through the Raz. At 2 p. m., when running, under a press of sail, between the *Vieille* rock and *Pointe Carnarvan* and coming up fast with the frigate, the *Tonnant* lost her main topmast and fore and mizen topgallantmasts by the violence of the wind. The latter, nevertheless, opened a smart fire upon the *Clorinde*, then within little more than pistol-shot distance; but the frigate, having judiciously reduced her sails when the squall came on, now possessed them all in a perfect state, and soon outran her pursuer. After receiving a few harmless shot from the battery on *Pointe Trépassée*, the *Tonnant* gave over the chase; and at 5 p. m. the *Clorinde* anchored in the road of Brest. Falls in with and is nearly captured by *Tonnant*.
Anchors in Brest road.

It unfortunately happened, that the action off Madagascar was not allowed to pass without a charge, an implied charge, at all events, of misconduct on the british side. Having previously stated, in his official letter, captain Losack's report of the disabled state of his ship, captain Schomberg says: "I am, however, called upon by my feelings, and a sense of my duty, to bear testimony to the meritorious conduct of the officers and ships' companies of his majesty's ships *Phœbe* and *Astrea*." Not a maravedi, in the way of praise, is bestowed upon the *Galatea* or *Racehorse*. Admitting the brig to Captain Schomberg's letter.

1811. have been a little shy, what had the frigate done
 Aug. to deserve such treatment? The *Galatea* was cer-
 Charge tainly more struck in the hull than either of her
 against two consorts, and had lost two of her topmasts,
 captain when they had every topgallantmast standing. The
 Losack. *Galatea* had also lost nearly four times as many
 men in killed and wounded as the *Astrea*, and
 a third more than the *Astrea* and *Phœbe* united.
 We can hardly suppose that captain Schomberg
 expected the *Galatea*, in such a state of disability,
 to renew the action, but merely wished her to put
 her head the right way. That was not done, although
 we see no reason, judging from the *Galatea*'s previous
 conduct, to doubt that the attempt was made. It
 was this apparent omission, coupled with the circum-
 stance of hoisting, in the presence of the enemy, a
 signal of distress, when not reduced to the emergency
 of being actually sinking or on fire, that called down
 upon the *Galatea*'s captain, officers, and crew, the
 severe punishment inflicted by captain Schomberg.

Latter Although the account of this action, given by our
 de- contemporary, partakes largely of the inaccuracies
 mands that pervade all his accounts of proceedings in the
 a court- vicinity of the isles of France and Bourbon, captain
 martial Brenton has, we are assured, stated one fact correctly.
 and is "Captain Losack, on his return to England,
 refused. demanded a court-martial, which the lords com-
 missioners of the admiralty, judging no doubt from
 the log-books, did not think proper to grant, and
 informed captain Losack, that they were satisfied
 with his conduct."* But in a case like this, in which
 the courage of a naval officer is publicly impugned,
 the approbation, if it amounts to that, of the lords
 commissioners of the admiralty is of very little value:
 the opinion of the profession at large, that by which
 alone the character of the officer is to stand or fall,
 is not moved a jot by it. We think, with submission,
 that the board of admiralty should not have refused

* Brenton, vol. iv. p. 561.

captain Losack's application. A court-martial would have completely settled the point; and, admitting that the captain, as the director of the movements of the ship, was the responsible party, why did not the first lieutenant, on behalf of the remaining officers and crew of the *Galatea*, as was done in the instance of the *Uranie*,* apply to have captain Losack brought to trial? In a case like this, no efforts should be spared to get redress; and, had redress been zealously and pertinaciously sought by captain Losack, we cannot think but that he would have eventually obtained it.

It was not during many months that the captain of the *Clorinde* was allowed to enjoy the ease and comfort, the good cheer and safe quarters, of a home-port. On the 13th and five succeeding days of March, 1812, captain Saint-Cricq was tried by a court-martial, for not having done all in his power in the action in which the *Renommée* had been captured; for having separated from his commodore in the heat of the battle, when he ought to have closed him, &c.; and for having omitted to proceed to Java, as prescribed by his instructions dated December 22, 1810, in case of inability to enter the Isle of France. Upon these charges the french captain was found guilty, and sentenced to be dismissed the service, degraded from the legion of honour, and imprisoned for three years.

1811.
Aug.
Capt. Saint-Cricq dismissed the french service - for his conduct in this action.

The *Néréide* and *Renommée*, being both new frigates, and the first a particularly fine one, were added to the class of british 38s; the *Néréide*, under the name of *Madagascar*, and the *Renommée*, under that of *Java*. Lieutenants John Baldwin and George Scott, first of the *Astrea* and *Phœbe*, were each deservedly promoted to the rank of commander; but lieutenant Thomas Bevis, the first of the *Galatea*, and who was wounded in the action, still remains a lieutenant. This, surely, is an extension of the

Ma-
dras.

On the 18th of April, the expedition destined for the conquest of the dutch island of Java having, under the personal directions of captain Christopher Cole of the 36-gun frigate *Caroline*, by the express orders of vice-admiral Drury issued during the illness that terminated his life, completed its preparations, the first division of the troops, commanded by colonel Robert Rollo Gillespie, sailed from Madras roads under the convoy of the *Caroline*, and on the 18th of May anchored in the harbour of Penang or Prince of Wales's island, the first point of rendezvous. On the 21st the second division of the troops, commanded by major-general Wetherall, and escorted by the british 38-gun frigate *Phaëton*, captain Fleetwood Broughton Reynolds Pellew, arrived also, having quitted Madras about six days after the *Caroline*. On the 24th the *Caroline* and *Phaëton*, with their respective charges, sailed from Penang, and on the 1st of June arrived at Malacca, the second rendezvous. Here the expedition was joined by a division of troops from Bengal, and by lieutenant-general sir Samuel Auchmuty, and commodore William Robert Broughton of the *Illustrious* 74, the military and naval commanders in chief. The whole of the troops thus assembled, including 1200 too sick to proceed, amounted to 11960 officers and men, of whom very nearly half, or 5344, were Europeans.

Boom-
pies
island.

On the 11th of June the fleet, leaving behind the 1200 sick, sailed from Malacca, and in a few days entered the straits of Singapore. Having cleared these, and passed Timbalan and a number of other islands, the expedition arrived on the 3d of July at the High Islands, which had been appointed the third rendezvous. On the 10th the fleet quitted the High Islands, and on the 20th reached Point Sambar, at the extremity of the south-west coast of the island

of Borneo, the fourth and last point of rendezvous. ^{1811.}
 Quitting Sambar on the following day, the 21st, the ^{May.}
 fleet arrived on the 30th off Boompies island, which
 lies nearly abreast of Indramayo river on the Java
 coast. Here the two commanders in chief waited
 awhile, in expectation of being joined by some frigates
 with intelligence.

We will take this opportunity of narrating two or
 three creditable little affairs, that occurred on the
 Java coast, while the expedition was on its way from
 Madras and waiting off Boompies island. On the
 23d of May, at daylight, the british 12-pounder 32-
 gun frigate Sir-Francis-Drake, captain George Harris,
 being about 13 miles to the north-east of the port of
 Rembang, island of Java, on her way to Sourabaya,
 discovered, lying at anchor about three miles nearer
 to the shore, a flotilla of dutch gun-vessels, consist-
 ing of 14, nine of them felucca, and the remaining
 four prow, rigged. On seeing the frigate, the gun-
 vessels weighed and stood for Rembang, but were so
 closely pressed, that by 7 A. M. three or four broad-
 sides brought five of the feluccas to an anchor under
 the Drake's guns, and they were immediately taken
 possession of. The others, finding themselves cut
 off from their port, furled sails, and pulled up in the
 wind's eye directly for the shore.

Shoaling his water considerably, captain Harris
 despatched lieutenants James Bradley and Edward
 Brown Addis, lieutenant of marines George Roch,
 midshipmen George Greaves, John Horton, and
 Matthew Phibbs, also lieutenant Knowles, Mr. Gill-
 man, and 12 privates of the 14th regiment of foot, in
 four six-oared cutters and a gig, to board the gun-
 vessels; the Drake keeping under way, and working
 to-windward, to cover the boats. By 8 A. M., not-
 withstanding a sharp fire of grape from several pieces
 of ordnance, lieutenant Bradley and his party, without
 the loss of a man, made prizes of the remaining nine
 vessels, the crews of which leaped overboard or
 fled to the shore in their boats just as the British were

1811. ready to spring on board. The gun-boats had only
 May. been launched 15 days, and were large vessels measuring 80 feet overall, and 17 broad; fitted to carry a 7-inch howitzer and a 24-pounder carronade aft, and to pull 30 oars. Only one of the vessels, however, was found with her guns on board; and it was supposed, either that the crews had thrown the guns overboard, or that the vessels were proceeding to Sourabaya to be fully armed and equipped.

Capt. Sayer meditates an attack upon Port Marrack. The small british squadron cruising off Batavia was under the orders of captain George Sayer, of the 18-pounder 36-gun frigate Leda. Since sir Edward Pellew had proved that Batavia and Sourabaya were assailable anchorages, the harbour of Marrack, situated about 74 miles to the westward of Batavia, was the only spot to which the french frigates, daily expected with troops, could run for safety. The anchorage was defended by a strong fort, standing upon a promontory, and mounting 54 pieces of cannon, 18, 24, and 32 pounders, with a garrison of 180 soldiers. Captain Sayer resolved to make a night-attack upon this fort with the boats of the Leda and of the 74-gun ship Minden, captain Edward Wallis Hoare. The force, with which the attempt was to be made, was to consist of 200 seamen and marines and 250 troops, the latter to be embarked in the flat-boats which the two ships had on board; and lieutenant Edmund Lyons, of the Minden, who had previously reconnoitred the fort, was, at his particular request, to lead the party. A few hours before the boats were to push off from the Minden, intelligence reached captain Hoare, of the arrival of a battalion of dutch troops at the barracks situated about half a mile in the rear of the fort. Under these circumstances, the attack was deemed too hazardous, and the Leda's boats returned to their ship.

The arrival of dutch troops in the vicinity occasions plan to be abandoned. Capt. Hoare detaches lieutenant Lyons with two boats On the 25th of July captain Hoare, by captain Sayer's direction, detached lieutenant Lyons with the Minden's launch and cutter, containing 19 prisoners, with orders to land them at Batavia; and, while there

and on his return down the coast, to gain all the information possible as to the enemy's movements in that part of Java. On the 27th lieutenant Lyons landed his prisoners at Batavia; and, from a conversation which he held with an intelligent resident, was fully persuaded that the Dutch had no intimation of the expedition being near Java, and did not expect to be attacked during the present mousoon. Conceiving that an attack at the north-western extremity of Java would draw the dutch troops in that direction, and thereby operate a favourable diversion, lieutenant Lyons, on the morning of the 29th, determined to make a midnight attack upon Fort-Marrack. This would appear, indeed, a rash undertaking for two boats' crews of 35 officers and men, especially when a force of 450 men had been thought inadequate to the service; but lieutenant Lyons was one of the officers who, about a twelvemonth before, had accompanied captain Cole in the storming of Belgica: he therefore made light of difficulties, which to many, and those brave men too, would have seemed insurmountable.

Having made, during the day, every necessary arrangement, lieutenant Lyons, at sunset, placed his two boats behind a point, which sheltered them from the view of the enemy's sentinels. At half past midnight, the moon sinking in the horizon, the boats proceeded to the attack, and, on opening the point, were challenged by the sentinels, who almost at the same instant fired their pieces; a proof that all hopes of a surprise had vanished. Still resolved, lieutenant Lyons ran the boats aground, in a heavy surf, under the embrasures of the lower tier of guns; and he and his gallant fellows, placing the ladders, sprang up them in an instant. Some of the first that gained the walls killed three soldiers, who were in the act of putting matches to the guns; and in a few minutes the British found themselves in complete possession of the lower battery. 1811. now formed his men, his 34 men; and, leading them
 July. on, stormed and carried the upper battery. On reaching the summit of the hill, the little band of British perceived the dutch garrison drawn up to receive them. The sailors fired, then rushed to the charge; lieutenant Lyons calling out, that he had 400 men, and would give no quarter. On hearing this, the Dutchmen fled in a panic through the postern gateway at the rear of the fort.

Dutch fire at the fort from a battery in the rear. At 1 A. M. on the 30th the Dutch opened a fire on the fort from a small battery in the rear, also from two gun-boats at anchor in the harbour. This fire was returned by a few guns; and, in the mean while, the remainder of the small party of British were employed in disabling the other guns, and in destroying as much as practicable of the battery. The first shot, fired at Fort Marrack from the battery in the rear, had struck the top of the postern or gateway through which the garrison had retreated; the second shot went through the gate; and the third shot, taking the same direction, convinced lieutenant Lyons that the Dutch had previously ascertained the range. The situation of the British was now critical and alarming, as the barracks in which was a whole battalion of dutch troops was only half a mile distant, and the drums were heard beating to arms. At this moment midshipman William Langton, the second british officer in command, and who had greatly distinguished himself in the assault, suggested to lieutenant Lyons to open the gate, and allow the shot to pass harmlessly through. This was done, and in the course of half an hour the enemy directed his shot considerably to the right of the gate; which left no doubt that the troops were advancing to the attack. Two 24-pounders, loaded almost to the muzzles with musket-balls, were now placed near the entrance of the gateway. This was hardly done, when the enemy's column was seen advancing; and, lest the gun should be fired too soon, lieutenant Lyons held one match and Mr. Langton

Troops advance to re-take the battery. Are repulsed when close to the gate.

the other. The head of the enemy's column, on arriving within about 10 yards of the gate, perceived that it was open. The dutch troops immediately shouted, cheered, and rushed on. At that instant the two guns went off, and the gate was shut. The foremost of the assailants were mowed down by the murderous discharge; and those behind, seeing the gate shut, fled pêle-mêle down the hill, leaving the handful of British withinside to destroy the fort at their leisure.

1811.
July.

This service was completed by dawn of day, and the last shot fired from the last gun that was spiked had sunk one of the two gun-boats. Lieutenant Lyons now deemed it prudent to retire. He did not do so, however, without leaving the british flag flying on the fort; and which flag had been hoisted under a heavy fire, in the most gallant manner, by midshipman Charles Henry Franks, a lad only 15 years of age. On coming to their boats, the British found the barge bilged, and beat up so high in the surf as to leave no prospect of getting her afloat. The whole 35, including Mr. Langton, slightly wounded with a bayonet, and three seamen also slightly wounded, embarked in the cutter, carrying with them the dutch colours. Thus to see them carried off as a trophy by a single boat's crew, an undeniable proof of the few men by whom the fort had been carried, must have been to the Dutch a truly mortifying sight.

But for one circumstance, we should probably have had to state that, for having thus accomplished, with 35 men, that which had been deemed too hazardous to undertake with 450, lieutenant Lyons was immediately promoted to the rank of commander. The bar was, that he had acted without orders. Captain Hoare called upon lieutenant Lyons to state his reason for making an attack, "the success of which," says the former in his letter to commodore Broughton, "so very far surpasses all my idea of possibility with so small a force, that comment from me would be superfluous." "I have only to add, that his con-

 July. under my command, has merited my warmest appro-
 bation and esteem." Commodore Broughton, we
 believe, considered the undertaking as a rash one,
 and would not forward the account to the admiralty;
 but the commodore's successor on the station, rear-
 admiral Stopford, was of a very different opinion, as
 is evident from his reply to a letter of captain
 Sayer's, requesting that lieutenant Lyons, in the
 expedition of which we shall presently give an
 account, might act as his aide-de-camp at the bat-
 teries of Batavia. "I beg," says the rear-admiral,
 "you will tell Mr. Lyons from me, that I consider
 myself fortunate and happy in procuring the ser-
 vices of an officer who so eminently distinguished
 himself by his gallant and successful attack on Fort
 Marrack, and I fully approve of his remaining with
 you."

 ford.

Procris attacks six gun-boats in Indramayo river. During the night of the 30th the 18-gun brig-
 sloop Procris, captain Robert Maunsell, in obe-
 dience to orders from captain Sayer, stood in and
 anchored near the mouth of Indramayo river, and at
 daylight on the 31st discovered lying there six gun-
 boats, each armed with two guns, a brass 32-pounder
 carronade forward, and a long 18-pounder aft, and a
 crew of 60 men, protecting a convoy of 40 or 50
 prows. The brig immediately weighed, and ran
 into a quarter less than three fathoms' water, but
 was then scarcely within gun-shot. Finding that the
 fire of the Procris made very little impression upon
 the gun-boats, and considering it an object of im-
 portance to attempt their destruction, captain Maun-
 sell proceeded to the attack in his boats; embarking
 in them, in addition to their respective crews, lieu-
 tenants Henry J. Heyland and Oliver Brush, and 40
 privates of the 14th and 89th regiments, detach-
 ments from which happened to be on board his
 vessel.

Capt.
 Mann-
 sell in

Although opposed by a heavy fire of grape and
 musketry, the british boats succeeded in boarding and

carrying five of the dutch gun-boats; the crews of which, after throwing their spears at the assailants, leaped overboard. The sixth gun-boat would have shared the same fate, but caught fire and blew up before the British could get alongside of her. This exploit was performed without any loss of life on the british side, and with no greater loss in wounded, than one master's mate, (William Randall,) seven seamen, one boy, and two soldiers. Captain Maunsell speaks in the highest terms, as well of the troops and their officers, as of his first lieutenant George Majoribanks, and the three master's mates George Cunningham, William Randall, and Charles Davies.

Having waited until the 2d of August without being joined by the expected ships, the expedition set sail, but had not proceeded far before the frigates hove in sight; and colonel Mackenzie, the officer who had been deputed to reconnoitre the Java coast, reported, as the most eligible spot for the disembarkation of the army, the village of Chillingching, about 12 miles to the eastward of Batavia. The commander in chief concurring, the fleet proceeded in that direction; on the 3d, in the evening, made Cape Carawang; and on the 4th, early in the morning, ran in for the mouth of Marandi river. Here the ships anchored during the interval between the land and sea breezes; and, weighing on the return of the latter, again stood in, and, before 2 P. M., were at anchor abreast of Chillingching.

So complete had been the arrangements, and so well chosen was the spot, that before dark the whole of the effective portion of the british infantry, amounting to upwards of 8000 men, of whom, as already stated, about half were Europeans, landed, without loss or opposition, covered on the left by the 36-gun frigate Leda, captain Sayer, who, being well acquainted with the coast, ran close in, and on the right by the frigates Caroline, Modeste, and Bucephalus, also the ship and brig sloops and honourable company's cruisers attached to the expedition. 1811. rapid approach of the fleet had prevented the enemy
 Aug. from ascertaining the intended place of landing in
 time to send a force thither to guard it: this being
 noticed by captain Cole, he made the signal from
 the Caroline, for the advance of the army to land
 immediately, then hoisted out his boats, tripped his
 anchor, and dropped the Caroline nearer to the
 shore. No time was occupied in arranging the order
 of the boats, they being ordered to shove off when
 manned and filled with troops. His example being
 followed by captains Elliot and Pelly, and the boats
 of the other men of war being sent to assist in con-
 veying the troops, about 8000 soldiers, with their
 guns, ammunition, and provisions, were landed in
 safety by half past six o'clock. Soon after dark the
 british advanced guard had a skirmish with the
 enemy's patroles, who, but for Captain Cole's alacrity
 and promptitude in making the above signal, with-
 out waiting to complete the arrangement of boats,
 &c., as usual in such cases, would have taken post
 in a wood at the back of the beach, and might have
 occasioned great loss to the invading army."*

Dutch
 force
 on the
 island.

General Daendels, the late governor-general of
 Java, had recently been superseded by general Jan-
 sens; and the latter, who had only been apprized of
 the intended attack since the 1st or 2d of the month,
 was now with his army, amounting to between 8000
 and 10000 effective troops, native and european,
 shut up in the strong hold of Meester-Cornelis, an
 entrenched camp, situated about nine miles from the
 city of Batavia, and defended by two rivers, one on
 the east, the other on the west, with a number of
 redoubts and batteries guarding each pass. The
 circumference of these fortified lines was nearly five
 miles, and there were mounted in different parts of
 it 280 pieces of cannon.

On the 6th the Leda and small cruisers proceeded
 off the entrance of the river Anjole, or Antziol, dis-

tant about two miles from the capital; and the fleet 1811, anchored off Tonjong-Prioeh; where, in the course of the day, the advance of the british army, under the command of colonel Gillespie, took post. On the 7th, in the night, the advance crossed the river Anjole on a bridge of flat boats, prepared by the navy, under the direction of captains Sayer, Maunsell, and Reynolds. On the 8th, in the morning, a flag of truce was sent into the city of Batavia, and a deputation came out from the inhabitants, requesting to surrender at discretion, and put themselves under the protection of the British. The lieutenant-general and commodore having agreed to respect private property, the advance under colonel Gillespie took immediate possession of the city; and the men of war and transports removed to the anchorage before it.

British
pre-
pare to
attack
general
Jan-
sens.

On the 10th a smart skirmish took place between the advanced division of each army; which ended in the defeat of the Dutch, and in the occupation by the British of the important post of Weltervreden, distant about six miles from the city on the road to Cornelis. Preparations were now made to attack general Jansens in his entrenched camp at the latter place, distant about a league beyond Weltervreden. On the 20th, in the night, the British army broke ground within 600 yards of the enemy's works; and on the evening of the 21st the batteries, mounting 20 long 18-pounders, together with eight howitzers and mortars, were nearly completed. To assist in erecting and fighting these batteries, 500 seamen had been landed from the squadron, under the orders of captain Sayer, assisted by captains Festing, Maunsell, Reynolds, and Edward Stopford: the latter a volunteer from on board the Scipion, where he was waiting to join his ship the Otter. A detachment of marines, under captain Richard Bunce of that corps, had also been disembarked from the ships, to increase the strength of sir Samuel's army, already considerably reduced by sickness.

Dutch
make a
sortie
but are
repuls-
ed.

On the 22d, early in the morning, the Dutch made a sortie, attacked the works of the British, and gained a momentary possession of one of the batteries; but the former were at length repulsed and driven within their lines. Being thus foiled, the Dutch began to open from their redoubts a tremendous fire. Thirty-four heavy guns, 18, 24, and 32

pounders, bore upon the british front, and kept up an incessant and very destructive cannonade. On the 23d neither party fired ; but on the 24th a severe cannonade began on both sides, and continued throughout that and the following day, with much mutual slaughter, and to the evident disadvantage of the Dutch, many of their guns being dismounted and their front line of defence much damaged. In this state of things, an assault was resolved upon, and that truly gallant officer colonel Gillespie was intrusted with the command of the principal attack. At midnight on the 25th the troops moved off, and, after a most desperate struggle, in which the british seamen and marines bore a distinguished part, carried all before them. Nearly 5000 troops, including three general officers, 34 field-officers, 70 captains, and 150 subaltern officers, were taken prisoners, more than 1000 were found dead about the works, and many others must have fallen in the pursuit.

1811.
Aug.

British
assault
and
carry
the
dutch
works.

General Jansens made his escape with difficulty during the action, and reached Buitenzorg, a distance of 30 miles, accompanied by a few cavalry, the sole remains of his army. The dutch commander in chief quitted Buitenzorg, a little while before the british cavalry entered the town, and fled to the eastward. The loss to the british army, including the natives attached to it, from the 4th to the 27th of August inclusive, amounted, according to the official returns, to 141 killed, 733 wounded, and 13 missing ; and the loss to the british navy, between the same dates, amounted to 11 seamen and four marines killed, captain Stopford, (right arm carried off by a cannon-shot,) one lieutenant, (Francis Noble,) two lieutenants of marines, (Henry Elliot and John Stepney Haswell,) two master's mates, (John Dewdney Worthy and Robert Graham Dunlop,) 29 seamen and 20 marines wounded, and three seamen missing ; making the total loss of the two services, up to the 27th of August, 156 killed, 788 wounded, and 16 missing.

Two
french
frigates
at Sou-
rabaya.

The two new french 40-gun frigates *Nymphé* and *Méduse*, which, under the orders of commodore Joseph-François Raoul of the former, had escaped from Nantes in the spring of the year, were at this time lying in the harbour of Sourabaya. Rear-admiral Stopford, on the day after his arrival in Batavia road, despatched four frigates, the *Akbar*, *Phaëton*, *Bucephalus*, and *Sir-Francis-Drake*, to look after these french frigates, and watch the different entrances by which they might effect their escape. On the 30th of August the *Akbar*, who had been in company with the *Bucephalus* at an anchor off the east end of Java, weighed and sailed to the westward.

They
sail out
and are
chased
by the
Buce-
phalus
and
Barra-
couta.

On the 3d of September, at 3 p. m., the two french frigates, having received on board several of general Jansen's aides-de-camp, and others of the principal fugitives from Cornelis, weighed and began warping themselves into the outer road. The *Bucephalus* saw the manœuvre, and instantly weighed and made sail to close the enemy. On the 4th, at daylight, the *Barracouta* joined the former; and at 10 a. m. the british frigate and brig wore and stood towards the two french frigates; who, during the night, had warped themselves considerably ahead, and were now under sail working out of the harbour, with the wind a moderate breeze at north-east. The *Bucephalus* and *Barracouta* immediately proceeded in chase; and at midnight the two french frigates bore from the first, who was far ahead of her consort, north-west half-west distant three or four miles. By daylight on the 5th the *Bucephalus* was ahead of the *Barracouta* six or seven miles, and the french frigates on the former's lee bow, the weather nearly calm. At 5 h. 30 m. a. m. a breeze sprang up from the eastward; and at sunset the french frigates bore north-east by north distant seven or eight miles. During the 6th, 7th, and 8th nearly the same distance was preserved between the two french frigates and the one british frigate, which, accompanied by

Barra-
couta
drops
out of
sight
astern.

a brig sloop of war, was so earnestly pursuing them; but at midnight, notwithstanding all her efforts to keep up. the *Barracouta* dropped entirely out of sight of her consort. 1811.
Sept.

The *Bucephalus*, now entirely alone, persevered in the chase during the whole of the 9th, 10th, and 11th, and at 6 A. M. on the 12th saw the island of Great Pulo-Laut bearing east-south-east, and her enemy south, distant about four leagues, with the weathergauge in his favour. At 9 A. M. the two french frigates bore down, with the apparent intention of embaying the british frigate between Borneo and Paulo-Laut; but the *Bucephalus* wore and bore up, in order to keep off shore. The *Nymphé* now signalled the *Méduse*; and shortly afterwards the two frigates wore, and made all sail in line abreast after the *Bucephalus*, then within four miles of them, steering west by north, and soon under an equal press of sail with her pursuers. By noon the *Nymphé* had got ahead of her consort, and was gaining on the *Bucephalus*, now steering about west by south. At 1 P. M. the latter commenced firing her stern-chasers; and shortly afterwards the *Nymphé* returned the fire with her bow-chasers, yawing occasionally, as she advanced on the british frigate's larboard quarter, to get her foremost maindeck guns to bear. This yawing necessarily checking her progress, the *Nymphé* dropped a little astern. At 2 h. 30 m. P. M. the *Méduse* got up on the starboard or lee quarter of the *Bucephalus*, and, after receiving a few of the latter's shot, yawed also, and fired her broadside. By this time the *Nymphé* had hauled to-windward, on the larboard quarter of the *Bucephalus*, out of gun-shot; and, the *Méduse* dropping also out of gun-shot on the opposite quarter, the british frigate ceased firing. At 4 P. M. two shoals were discovered right ahead of the *Bucephalus*. Confiding in his skill and experience, captain Pelly passed between the shoals, in the hope of decoying both or one of the french frigates upon them; but they, seeing the The french frigates chase and fire at Bucephalus.

They give over the pursuit

1811. danger in time, shortened sail and tacked to the
 { north-east, and at dark were lost sight of. At day-
 Sept. light on the 13th the island of Arentes bore from the
 Bucephalus south-south-west; and at 11 A. M. the
 two french frigates were again seen at a great dis-
 tance in the north-east, but shortly afterwards
 wholly disappeared.

Da- The Bucephalus had not a man hurt, and sustained
 mage, very slight damage in her rigging, sails, masts, or
 &c. to hull. To what extent her shot had injured the
 both Nymphe and Méduse is not known; but it was evi-
 parties. dent that the rigging and sails of the Nymphe had
 in some degree suffered. Admitting that these fri-
 gates were justified in using the utmost despatch to
 get away from the Java coast, and from the fleet that
 was hovering near it, what had they to dread on
 reaching the coast of Borneo? It is true that com-
 modore Raoul then chased in his turn; but he de-
 sisted from pursuit on the first appearance of danger
 from shoal water, and abandoned a british frigate
 which, obstinately defended as she undoubtedly
 would have been, must have ultimately been his prize.

Gal- The conduct of captain Pelly on the other hand,
 lantry was in the highest degree praiseworthy: he was
 of induced to chase an enemy more than doubly supe-
 of rior to himself, in the hope of being able to separate
 captain one french frigate from the other, or of falling in
 Pelly. with a consort, with whose assistance he might have
 a fair prospect of conquering the two; and his perse-
 verance in chasing, and success in keeping sight of,
 two french frigates, during so many days and nights,
 afforded a decided proof both of his gallantry and
 his seamanship. Of the Nymphe and Méduse, we
 have nothing further to state, than that they made
 their long voyage in safety, and arrived at Brest on
 the 22d of December.

While these two french frigates were meditating an
 escape from the channel formed by the west end of
 the small island of Madura, the two british frigates
 Sir-Francis-Drake and Phaëton lay unconsciously at

anchor off the east end, close under the isle of Pondock. They were not, however, lying inactive, as the following details will show. On the 29th of August 1811. Sir-Francis-Drake-and-Patton attack Samanap. August captain Harris, the senior officer, having resolved to attack the fort of Samanap, the capital of the island, sent the Dasher sloop round the south end of Pulo 'I Lanjong, to gain an anchorage as near as possible to the fort, and in the evening, accompanied by captain Pellew, proceeded with the boats of the two frigates, in two divisions. On the 30th, at daylight, the boats sailed through the channel formed by the east end of Madura and Pulo 'I Lanjong, and by 30 minutes past midnight effected a landing, without discovery, at a pier-head about three miles from the fort.

At 1 h. 30 m. A. M. on the 31st, two columns, composed each of 60 bayonets and 20 pikemen, flanked by a 12, 4, and 2 pounder field-piece, having in reserve the marines of the Hussar, began their march, in the utmost order, towards the fort. Silence among the men was so rigidly observed that, notwithstanding the governor had intimation of the Dasher's having weighed and been seen entering the harbour, and that the british boats had been seen standing in for the town, the dutch garrison at the fort did not discover the approach of the storming party, until the outer gate, which had been left open, was passed. The gallantry of the rush at the inner gate prevented the Dutch from securing it, and only allowed time for two or three guns at the south-west bastion to be fired. The assault was as sudden as it was resolute; and by 3 h. 30 m. A. M., after a 10 minutes' feeble struggle with 300 or 400 madura pikemen, who with their chief were made prisoners on the ramparts, the British became masters of the fort of Samanap, a regular fortification, mounting sixteen 6-pounders. Capt. Harris storms and carries the fort.

On the appearance of daylight, observing french colours flying on a flagstaff at the east end of the town, and perceiving the natives begin to assemble

1811. in numbers, captain Harris despatched captain
 Aug. Pellew, at the head of a column of 100 bayonets
 and one field-piece, with a flag of truce, to the
 governor, calling upon him to surrender in 10 minutes,
 and promising that private property should be respected.
 To this was received an answer, requiring captain Harris to evacuate the fort; and captain Pellew sent intelligence, by midshipman John William Oldmixon, described as an intelligent young officer, that the dutch force appeared to be about 2000 men, protected by four field-pieces in front, and posted on a bridge, possessing every advantage of situation, the troops of an enemy having to advance along an even and straight road for a quarter of a mile before they could force the bridge.

Engages
 a body
 of the
 enemy.

Not at all daunted by this alleged superiority of force, captain Harris sent orders to captain Pellew, to advance when the first gun was fired from a column that the former would lead out of the fort, and with which he meant to turn the enemy's left wing. Accordingly, with 70 small-arm, and 20 pikemen, supported by a 4-pounder field-piece, (leaving in the fort, as a reserve, 40 or 50 men,) captain Harris proceeded to put his bold plan into execution, and soon had the satisfaction to observe the dutch governor, whose force, as acknowledged by himself, consisted of 300 muskets, 60 artillerymen, and from 1500 to 2000 pikemen, armed each with a long pike, a pistol, and a crees, draw off two field-pieces and break his line, in order to oppose the small but resolute column advancing against his left. Both british columns discharged their vollies nearly at the same time, and, for five minutes, a sharp fire was given and returned; but, as captains Harris and Pellew and their respective parties advanced nearer, the Dutch gave way, and an animated charge by the British left them masters of the field, the colours, and the guns. The governor and the other dutch inhabitants were made prisoners; and captain Harris accepted a flag of truce from the rajah of Samanap,

Compels
 the

 to sue
 for
 peace.

who was present, on condition that none of the ^{1811.} inhabitants of the district should again arm themselves against the British. ^{Aug.}

This very gallant exploit was not achieved without a loss on the part of the latter of three men killed and 28 wounded; and the loss on the opposite side, although it could not be ascertained, was known to be severe, including among the killed the commander in chief of the native troops, second in rank to the rajah, and his two sons. This success was followed up by the total overthrow of the french authority in Madura and the adjacent isles. The spirited conduct of captain Harris, in bringing matters to such a close, proves that his own element is not that alone in which a naval officer, possessing zeal, activity, and judgment, may be enabled to distinguish himself. ^{Loss on british side.} ^{Madura, &c. freed from the yoke of the French}

Among the wounded in storming the town of Samanap, was lieutenant Roch of the Sir-Francis-Drake's marines, who was speared twice by two natives, while resolutely endeavouring to wrest the colours out of the hands of a french officer. During the time that captain Pellew, by the direction of captain Harris, was negotiating with the governor of Madura, lieutenant Roch, with a column of marines, destroyed, in the face of the enemy, a fort at the mouth of the river, which leads, as we suppose, to Samanap, mounting twelve 9-pounders. ^{Gallantry of lieut. Roch.}

In order to intercept the retreat of general Jansens from Cornelis to the eastward, rear-admiral Stopford, on the 31st of August, detached the Nisus, Présidente, and Phœbe frigates, and Hesper sloop, to Cheribon, a seaport about 35 leagues to the eastward of Batavia. On the 3d of September, at dark, the three frigates anchored off the port; and at daylight on the 4th captain Beaver, having despatched captain Warren with a flag of truce to summon the french commandant of the fort to surrender, weighed with the frigates, and anchored as near the fort as the depth of the water would admit; when, ^{Cheribon surrenders to captain Beaver}

1811. instantly, the french colours were hauled down and
 { Sept. the british hoisted in their stead. The marines of
 the three frigates, amounting, including a party
 belonging to the *Lion* 64, to 180, immediately landed,
 and took possession of the fort. Just at that mo-
 ment general Jamelle, the commander in chief of the
 french troops, who had arrived at the landroosts
 from Buitenzorg, was, while changing horses to pro-
 ceed to the eastward, taken prisoner by captain
 Warren, with the aid of his gig's crew; as were
 also an aide-de-camp of general Jansens and a
 lieutenant of infantry.

Gene-
 ral Ja-
 melle
 taken
 prison-
 er by
 captain
 Warren

Hearing from the french general, that 350 infantry
 and 350 cavalry were hourly expected to arrive at
 Cheribon from Buitenzorg, captain Beaver landed
 150 seamen to garrison and defend the fort; leaving
 the marines to act offensively against the enemy in
 the field, should occasion require it, and placing
 three launches, with carronades, in the river, to
 enfilade the two chief approaches to it. On the
 5th, in the morning, the *Hesper*, who had been
 delayed by bad sailing, joined the *Nisus*, *Présidente*,
 and *Phœbe*. On the two following days a quantity
 of treasure and valuable stores, and several pri-
 soners, were brought from Carang-Sambang, a place
 about 35 miles in the interior, by a detachment of
 seamen and marines sent thither for the purpose.
 On the 11th, by 1 A. M., all the seamen and marines
 that had been landed were reembarked, having made
 about 700 prisoners, including 237 Europeans; and
 at 4 A. M. the *Nisus* and *Phœbe* weighed and steered
 for Taggal, a port about 20 or 25 leagues further
 to the eastward. On the 12th the *Phœbe* arrived
 off the harbour; and, landing some sepoys and a
 detachment of seamen and marines, captain Hillyar
 took quiet possession of the fort and public stores.

Phœbe
 takes
 posses-
 sion of
 Taggal.

While the british navy was thus effectually lending
 its aid, by subduing and taking possession of the
 different sea-defences of this valuable colony, the

commander in chief of the british army was pressing ^{1841.}
close upon general Jansens; so close that, on the ^{Sep.}
16th of September, the latter, then at the fort of ^{Java}
Salatiga, about 30 miles to the southward of Samarang, ^{surrendered.}
which is 343 miles east from Batavia, proposed
to capitulate; and on the 18th the island of Java and
its dependencies were surrendered to the british
arms.

BRITISH AND FRENCH FLEETS.

1812. THE abstract, showing the state of the british navy at the commencement of the present year,* so nearly resembles the last, as to call for no additional remarks.†

British officers, &c. The number of commissioned officers and masters, belonging to the british navy at the beginning of the year 1812, was,

Admirals	62
Vice-admirals	65
Rear-admirals	60
" superannuated	31
Post-captains	777
" "	32
Commanders, or sloop-captains	566
" superannuated	50
Lieutenants	3163
Masters	567

And the number of seamen and marines, voted for the service of the same year, was 145000.‡

Russia declares war against France, &c. With respect to the fleets of the powers at war, another inactive year passed; and yet France continued adding to her already powerful navy new line-of-battle ships and frigates. On the 19th of March, Russia declared war against France; and on the 18th of July a treaty of peace was signed at Orebo between Russia, Sweden, and Great Britain. The Scheldt fleet, of from 16 to 20 sail of the line and eight or nine frigates and smaller vessels, evinced, several times, an inclination to put to sea, but was too narrowly watched by the indefatigable officer

* See Appendix, Annual Abstract No. 20.

† See Appendix, Nos. 1 and 2.

‡ See Appendix, No. 3.

that cruised off Flushing, vice-admiral sir Richard John Strachan. Towards the end of the year, however, a want of men, owing to the frequent draughts made to supply the army, contributed to keep the french fleet stationary. A squadron of seven, and latterly of nine, sail of the line in the Texel threatened also to sail out, but was restrained from the attempt, by the dread of encountering the british force stationed off that port. At Amsterdam, in the beginning of October, the keels of two 74-gun ships, the Audacieux and Polyphème, were ordered to be laid down, to commemorate the entry of Buonaparte into Moscow; but, before probably a timber belonging to either ship was set up, the french emperor's forced exit from the russian capital had also taken place.

The french squadron at anchor in the port of Lorient, consisted of five line-of-battle ships, one only of which, the Vétéran, had ever been at sea. This ship had, but when we are unable to state, managed to effect her escape from the neighbouring port of Concarneau, where she had been so long blockaded. In the months of February and March, four of those ships, the Eylau, of 80, and the Guilemar, Marengo, and Vétéran, of 74 guns, along with two ship-corvettes, under the command of vice-admiral Allemand, lay watching an opportunity to elude the vigilance of a british squadron, of the same numerical force, under captain sir John Gore, of the 80-gun ship Tonnant, having with him the 74-gun ships Northumberland, Colossus, and Bulwark, captains the honourable Henry Hotham, Thomas Alexander, and Thomas Browne. On the 9th of March, early in the afternoon, leaving her three consorts lying to off the island of Hedic, the Tonnant made sail and worked up through the Taigieuse passage against a fresh north-east wind, in order to reconnoitre the port of Lorient. At 6 p. m. sir John discovered that M. Allemand had effected his escape; and at 8 p. m. the Tonnant anchored for the night

1814.
March.

Force
in and
off
Lorient

1812. off the south-east point of Groix. At daybreak on
 March. the 10th the Tonnant weighed and made sail towards
 Lorient; and at 8 A. M. clearly observed that there
 was no ship of war in the port, except a two-decker,
 with topgallantmasts pointed and rigged, fitting at
 the arsenal. Having now ascertained, beyond all
 doubt, that the french admiral had sailed, sir John
 bore up to join his squadron, then just visible in the
 south-south-west.

M. Allemand had, in fact, put to sea on the night
 of the 8th; and, but for his extraordinary good
 fortune, might, as we shall presently see, have ter-
 minated his cruise in Portsmouth or Plymouth,
 instead of in Brest, whither, it appears, he was
 bound. On the 9th, at 1 P. M., when about seven
 leagues to the southward of the Penmarks, these
 four french sail of the line and two corvettes were
 discovered by the british 38-gun frigate Diana, cap-
 tain William Ferris, but were lost sight off in the
 evening. On the 10th, however, at 9 A. M., when
 close hauled on the starboard tack with the wind at
 north-east, the Diana regained a sight of the french
 squadron, then on her weather bow, 12 or 13 miles
 distant, steering the same course as herself, north
 by west. The frigate continued sailing parallel
 with the french ships, to watch their manœuvres,
 until 3 P. M.; when the 74-gun ship Pompée, captain
 sir James Athol Wood, joined company to-leeward.
 At 4 P. M. captain Ferris hove to to communicate
 with his superior officer; and, at 4 h. 30 m. P. M.,
 the british 74 and frigate filled and made all sail on
 the starboard tack. Shortly afterwards the Diana,
 who still kept to-windward of the Pompée, observed
 two vessels on her weather beam, to-windward of
 the french squadron; the ships of which immediately
 bore up, under all sail, evidently to avoid them.

Also by Tremendous and Poictiers. These two vessels were the british 74-gun ships
 Tremendous, captain Robert Campbell, and Poictiers,
 captain John Poer Beresford, chasing the french
 squadron, which they had discovered since daylight,

when cruising six or seven leagues west-south-west of Ushant. At 11 A.M. captain Campbell had detached the Poictiers in chase of a ship to the eastward, which proved to be the british 18-gun ship-sloop Myrtle, captain Clement Sneyd; and whom captain Beresford, on joining him at 1 P.M., sent to warn an english convoy, then seen in the north-east, standing to the westward, of the presence of an enemy's squadron. At 4 P.M., the Poictiers having rejoined the Tremendous, the two 74s resumed the chase of M. Allemand, and were descried by the Diana, in the manner we have just related.

As the french ships, when they bore up to avoid the Tremendous and Poictiers, steered in a direction to cross the bows of the Diana and Pompée, the two latter, at 6 h. 15 m. P.M., tacked to the south-east. Soon afterwards the Diana lost sight of the Pompée in the south-south-east, and about the same time observed and answered the night-signal for an enemy made by her two friends to-windward. The Pompée also observed the flashes of guns and rockets, which were the signals made by the Tremendous and Poictiers; but it does not appear that she answered them. Towards midnight the wind shifted to the north-north-west; and, at about 30 minutes past midnight, the Pompée suddenly discovered two ships in chase of her in the south-east. The british 74 immediately bore up and made all sail, altering her course frequently, to avoid her pursuers; one of whom got near enough to fire three or four shot at her. On this the Pompée started 80 tons of water, and then gained so rapidly upon the two supposed enemy's ships, that at daylight on the 11th they were no longer to be seen. In the course of the forenoon of that day the Diana, and in the evening the Bulwark and Colossus, joined company with the Pompée; as, on the day following, did the Tonnant, Tremendous, and Poictiers. The two latter had lost sight of the french ships at dark on the 10th; but, having again discovered them at daylight on the 11th, had chased

1812. them until 2 P. M.; when, foggy weather coming on, the Tremendous and Poitiers shortened sail and hauled to the wind on the larboard tack.

M. Allemand
chases
the Nijaden,
and ar-
rives at
Brest.

Thus left to himself, M. Allemand cruised about at his leisure, and on the 15th of March, in latitude $47^{\circ} 39'$ north, longitude $10^{\circ} 20'$ west, fell in with and chased the british 12-pounder 36-gun frigate Nijaden, captain Farmery Predam Epworth; but the frigate, although frequently fired at by the french van-ship, and a good deal damaged in her sails and rigging, managed to effect her escape. Captain Epworth, also, by his signals, prevented the Northampton, Monarch, and Euphrates, homeward-bound indiamen, from becoming prizes to the french admiral; towards whom they were unsuspectingly steering until apprized of their danger by the Nijaden. After making a few inconsiderable prizes, the french squadron bent its course towards Brest, and on the evening of the 29th anchored in the road; a matter of just boast to M. Allemand, as two or three british squadrons, besides the one he had escaped from, were anxiously looking out for him.

Incom-
plete
ac-

respect-
ing the
escape
of this
french
squa-
dron.

The account we have given of the escape of the french admiral from the Pompée, Tremendous, and Poitiers, although the only account to be seen in print, is far from being so full and clear as it might have been made, could we have gained a sight of the minutes of the court of inquiry which, it appears, was held at Portsmouth on the subject. We turned to the biography of sir James Athol Wood in the work of Mr. Marshall; but, although 13 closely printed pages are devoted to an account of the rear-admiral's professional life, not a line is spared to throw some light on the proceedings of the Pompée in the spring of 1812.

French
ships
in Isle
d'Aix
road.

In the latter part of the present year the Ocean, and four of the six two-deckers which, along with her, had so nearly been destroyed by the British in 1809, were again in the road of Isle d'Aix, watching an opportunity to proceed to Brest; whither the

Courageux and Polonais, in the port of Cherbourg, ^{1812.} were also waiting to get; and where Buonaparte ^{May.} wanted once more to assemble a respectable fleet. The french port, which at this time, owing to the powerful fleet at anchor within it, was a much more important station than Brest, now claims our attention.

The british Mediterranean fleet still continued its listless task of watching a superior, though, excepting a little demonstration now and then off the port, inactive enemy. On the 3d of January 14 sail of the line, four frigates, and several corvettes, under rear-admirals Lhermite, Baudin, Violette, and Duperré, weighed from Toulon road, sailed out, and sailed in. Once or twice also during the month of May, this manœuvre was repeated, under vice-admiral Emeriau himself; but the french admiral took care to sail out only when the wind was quite in his favour, and sir Edward Pellew, if in sight at all, at a great distance to-leeward. ^{Proceedings of Toulon fleet.}

On one occasion, however, a few shot were exchanged, and a british frigate was rather critically circumstanced. On the 28th of May, at 7 h. 30 m. A. M., the 38-gun frigate Menelaus, captain sir Peter Parker, bart., being on the look-out off Cape Sicie, discovered a french frigate and brig in Hyères bay, standing under all sail, with the wind at east-south-east, for the Petite-Passe. The Menelaus immediately made sail to cut off the two vessels from entering Toulon; whereupon the latter, which were the 40-gun frigate Pauline and 16-gun brig Ecureuil, from the Adriatic, shortened sail to the topsails, and hauled upon a wind, to wait for the protection of their fleet, which had just then weighed from the road, to the number of 11 sail of the line and six frigates. As soon as they observed that the fleet was sufficiently advanced to cover them, the Pauline and Ecureuil bore up and steered for Toulon. The Menelaus, nevertheless, boldly stood on; and at 9 h. 30 m. A. M., when close under Pointe ^{Gal-lant conduct and narrow escape of the Menelaus.}

1812. ^{Aug.} Ecampebarion, the batteries of which had already opened upon her, commenced firing at the french frigate and brig, within musket-shot distance. In less than half an hour a shot from one of the batteries cut the fore topmast of the Menelaus almost in two, and obliged her to wear and stand out. By this time the two advanced line-of-battle ships of the french fleet were nearly in the wake of the british frigate, and the british in-shore squadron of four sail of the line, consisting of the Repulse, Centaur, Malta, and Kent, under rear-admiral Hallowell, was hull-down to-leeward. But, by extraordinary good management, notwithstanding that her fore topmast was only held together by fishes of capstan bars, and that her rigging and sails were greatly damaged, the Menelaus got clear off without losing a man.

New
french
ships
at
Toulon
Genoa,
&c.

On the 15th of August the 74-gun ship Ville-de-Marseille, and on the 6th of December the 130-gun ship Montebello, were launched at Toulon; thus making the french force in the port 18 sail of the line, including five three-deckers. At Genoa there was the new 74-gun ship Agamemnon; besides the 40-gun frigates Galatée, launched May 3, and Driade, launched October 7; and at Naples, the Capri 74. There were, also, at these two ports and at Spezzia, three or four sail of the line on the stocks.

Grow-
ing im-
port-
ance of
Venice
as a
naval
dépôt.

Venice was now becoming an important naval dépôt. On the 6th of September, 1810, a fine 74-gun ship, the Rivoli, was launched at the arsenal at Malamacca, about five miles distant from the city, and was floated over the bar, that crosses the passage at about mid-way, by means of a camel, or water-tight box, the same as is used at Amsterdam and St.-Petersburg. This ship put to sea, for the first time, in February of the present year; but it was only, as we shall presently show, to fall into the hands of a british ship of the same force. In the latter end of 1811 or beginning of 1812 two other 74s were launched at Malamacca; the Mont-St.-Bernardo and Regenitore. The first was commissioned under french colours, and in July

LIGHT SQUADRONS, &c. ROSARIO WITH FR. FLOTILLA. 65

bore the flag of rear-admiral Duperré; the other ^{1812.} under venetian colours, and was commanded by ^{March.} captain Paschaligo, the gallant captain of the Corona in the action off Lissa. On the 2d of August the Castiglioni 74 was launched, and, as soon as she could be fitted, was commissioned by the late captain of the Danaé, whose frigate had recently been burnt by accident in the port of Venice. The Castiglioni afterwards received the flag of rear-admiral Duperré. On the 15th the Reali-Italiani 74 and Piane frigate were launched; but the 74 was only completed as high up as her main deck. There were eight other two-deckers on the stocks, two of which were in a forward state; but a scarcity of timber, owing to the poverty of the local government, greatly retarded the progress of the workmen.

LIGHT SQUADRONS AND SINGLE SHIPS.

On the 27th of March, at 8 h. 30 m. A. M., the town of Dieppe bearing south-west distant four or five miles, the british brig-sloop Rosario, of eight 18-pounder carronades and two long sixes, captain ^{Rosario falls in with a french flotilla.} Bootey Harvey, observed a flotilla of 12 brigs and one lugger standing alongshore. This was the 14th division of the Boulogne flotilla, commanded by capitaine de vaisseau Louis-Pierre-François-Ricard-Barthelemi Saizieu. Each brig mounted three long 24-pounders and an 8-inch brass howitzer, with a complement of 50 men. The commodore had sailed from Boulogne at 10 P. M. on the 26th, and was bound to Cherbourg. As the Rosario made sail to cut off the leewardmost of these 12 brigs, the whole, by signal from the commodore, formed in line, and severally engaged the british brig while passing on the opposite tack; and, when the Rosario luffed up to cut off the sternmost brig, the remaining 11 and the lugger bore down to support their friend and close with the daring enemy.

Finding them thus determined to support each other, and the Rosario's small force not justifying the risk

1812. of being laid on board by several such opponents at
 March. once, captain Harvey, with the signal flying for an
 enemy, bore up to a brig which he then observed in
 the offing. The moment the latter, which was the
 brig-sloop Griffon, of fourteen 24-pounder carronades
 and two sixes, captain George Trollope, answered
 the signal, the Rosario again hauled to the wind, and
 at 40 minutes past noon recommenced harassing the
 rear of the flotilla, then endeavouring, under all sail,
 to get into Dieppe. The Rosario tacked and wore
 occasionally, in order to close, receiving each time
 the fire of the whole line. At 1 h. 30 m. P. M., being
 far enough to-windward, the Rosario most gallantly
 ran into the body of the french flotilla, and, by
 cutting away the running rigging of the two nearest
 brigs, drove them on board each other: she then,
 backing her main topsail, engaged them within musket-
 shot, until they were clear, and afterwards stood on
 and engaged a third brig; who, losing her mainmast
 and fore topmast by the board, dropped her anchor.
 Passing her, the Rosario drove the next brig in the
 line on shore. Two more brigs of the flotilla yet
 remained to-leeward. Bearing up for these, the
 Rosario, at that time not more than three quarters of
 a mile from the shore, ran the nearest brig on
 board, and quickly carried her.

At-
 tacks
 flotilla,

 an-
 other.

Griffon So far the Rosario had acted alone, the Griffon,
 also drives one brig on shore and takes another. with all her exertions, not having yet arrived within
 gun-shot. While, however, the Rosario was bearing
 away with her prize, clear of the batteries, captain
 Harvey passed and hailed his friend, directing him
 to chase the remaining brig of the two which the
 Rosario had last attacked with so much success.
 The Griffon immediately proceeded on the service,
 and drove the french brig on shore near St.-Aubin,
 under a very heavy fire from the batteries. Seeing
 no probability of the Griffon's being able to destroy
 the brig, captain Harvey, who was occupied in
 removing his prisoners and repairing the running
 rigging of the Rosario, signalled the Griffon to

attack the remaining nine brigs of the flotilla in the south-east, then anchoring close in-shore. In obedience to this signal, the Griffon ran in-shore of one of the brigs at anchor near the centre, and, in the most gallant manner boarded and carried her. Captain Trollope then cut the cables of his prize, and stood out with her, in the face of a heavy fire from the batteries, and from the remaining eight french brigs. 1812.
March.

Finding, as the Griffon passed him, that she was too much disabled in her rigging immediately to renew the attack, yet determined, although his prisoners already equalled his sloop's company, to have another of the brigs, captain Harvey ran on board the brig which the Rosario, by her fire, had previously dismasted; and which, unknown to him at the time, on account of the darkness of the evening, had just been abandoned by her crew. While, with their three prizes, the Rosario and Griffon stood out to the offing, leaving two other brigs on shore, the french commodore, with the seven remaining brigs of his flotilla, got under way and entered Dieppe. In this truly gallant exploit, no other loss appears to have been sustained on the british side, than one midshipman, Jonathan Widdicomb Dyer, who conducted himself most nobly, and four men wounded; on board the Rosario. It is pleasant to be able to state, that merit met its reward: captain Harvey was made post, and Mr. Dyer a lieutenant, on the same day, the 31st of March. Griffon
takes a
third
brig.

 con-
 sorts.

On the 4th, at daybreak, the Rinaldo discovered and chased the Apelles, which had just been got afloat by the French, from a spot about five miles to the eastward of Etaples, and was now steering along-shore under jury-sails. At 9 A. M. the Bermuda and Rinaldo closed with the brig, and, after a few broadsides, drove her on shore under a battery about two miles nearer to Etaples. As the tide was falling, captain Cunningham discontinued the attack, in consequence of the advantage which the French would have in placing their field-pieces and small-arm men close to the Apelles at low-water mark. Before the tide served to renew the attack, captain Cunningham was joined by the Castilian, also by the 14-gun brig-sloop Phipps, captain Thomas Wells.

French
 driven
 from
 the
 Apelles
 and the
 brig re-
 captur-
 ed.

At 2 h. 30 m. P. M. the Bermuda, followed in line of battle by the other brigs, stood in close under the battery; each sloop, as she got abreast of the Apelles, pouring in her broadside. By these vigorous means, the french troops who were on board the Apelles were driven out of her. The boats of the squadron, as had been previously arranged, under the orders of lieutenant Thomas Saunders, first of the Bermuda, then pushed for, and, covered by the fire of the sloops, boarded the grounded brig; and, although for a considerable time exposed to a galling fire of shot and shells from the battery and from a collection of field-pieces on the beach, lieutenant Saunders and his party, by 4 P. M., succeeded in getting the Apelles afloat and restoring her to the service. Notwithstanding the unremitting fire kept up from the shore, not a man, either in the brigs or the boats, was hurt on the occasion.

Sky-
 lark
 de-
 stroyed
 by her
 crew.

Four of the french soldiers, not having time to escape, were taken in the Apelles; as well as the whole of her late crew, except captain Hoffman and 19 men. The officers and crew of the Skylark, after having

DESTRUCTION OF THE ARIENNE AND ANDROMAQUE. 69

set their vessel on fire, also arrived in safety on board the little squadron. For his zeal and promptitude in executing this service, captain Cunningham was shortly afterwards promoted to post-rank.

On the 9th of January the two french 40-gun frigates Arienne and Andromaque, and 16-gun brig-corvette Mamelouck, under the orders of commodore Martin Le Foretier, sailed from Nantes upon a cruise. On the 15th, at noon, in latitude $44^{\circ} 10'$ north, longitude $14^{\circ} 14'$ west, they fell in with the british 24-pounder 40-gun frigate Endymion, captain sir William Bolton. In about an hour afterwards the latter, who was to-leeward, exchanged numbers with the 50-gun ship Leopard, captain William Henry Dillon, having under her protection a convoy from Lisbon. At 2 P. M. the Endymion, one of the fastest sailing ships in the british navy, tacked after the two french frigates and brig, and at 4 P. M. was joined in the chase by the Leopard; who had previously signalled her convoy to make the best of their way into port. At 4 h. 30 m. P. M. the french vessels were observed to be under easy sail, as if in no dread of being overtaken. At 5 P. M. the Endymion ran the Leopard out of sight, and at 8 P. M. the french squadron ran her out of sight.

Having thus effected their escape, the french frigates very soon commenced their depredations upon commerce; plundering and destroying, not only english merchant vessels, but those of Spain, Portugal, and the United States of America. Intelligence of all this reaching the board of admiralty, the commander in chief of the Channel fleet, admiral lord Keith, then resident at Plymouth, was directed to order the officer in command off the port of Brest, to detach a force to endeavour to intercept these french frigates on their return to France.

The vessel, which rear-admiral sir Harry Neale selected to cruise off the port of Lorient for the purpose in view, was the 74-gun ship Northumberland, captain the honourable Henry Hotham; and

Arienne, Andromaque, and Mamelouck escape from Endymion and Leopard.

Commit serious depredations on commerce.

The Northumberland discovers

1812. certainly an officer, possessed of more zeal, ability,
 May. and local as well as general experience, could not have
 been chosen. On the 19th of May the Northumberland
 and chases them near Isle Groix. land parted company from the Boyne and squadron
 off Ushant, and made sail for her destination. On
 the 22d, at 10 A. M., the north-west point of Isle
 Groix bearing north distant 10 miles, and the wind a
 very light breeze from west by north, the Northum-
 berland discovered the three objects of her search
 in the north-west, crowding all sail before the wind
 for Lorient. Captain Hotham endeavoured to cut
 off the french squadron to-windward of the island,
 and signalled the british 12-gun brig Growler, lieu-
 tenant John Weeks, then about seven miles in the
 south-west, to chase; but, finding it impossible to
 accomplish that object, the Northumberland pushed,
 under all sail, round the south-east end of Groix,
 and, hauling to the wind close to-leeward of the
 island, was enabled to fetch to-windward of the
 harbour of Lorient before the french squadron could
 reach it.

French com-
 mo-
 dore
 tries to
 run
 past
 british
 74. Seeing himself thus cut off from his port, M. Le
 Foretier, at 2 h. 30 m. P. M., signalled his consorts to
 pass within hail, and then hauled up on the larboard
 tack to-windward of Pointe Taleet. Meanwhile the
 Northumberland, eager to close, continued beating
 to-windward between Groix and the continent, un-
 avoidably exposed to the batteries on each side, when
 standing within their reach. At 2 h. 49 m. P. M., the
 wind considerably fresher than it had been and blow-
 ing about west-north-west, the Arienne, Andromaque,
 and Mamelouck, formed in close line ahead, bore up,
 under every sail, with the bold intention, favoured
 by the wind and covered by the numerous batteries
 along that part of the coast, to pass between the
 Northumberland and the shore.

The british 74 immediately stood in as close as
 she could to Pointe de Pierre-Laye, and there, with
 her head to the shore and main topsail shivering,
 took her station, ready to meet the frigates; but

DESTRUCTION OF THE ARIENNE AND ANDROMAQUE. 71

these hauled so very close round the point, following the direction of the coast to the eastward of it, that captain Hotham, being ignorant of the depth of water so near the shore, did not think it practicable, consistent with the safety of the Northumberland, whose draught of water was nearly 25 feet, to lay the leading frigate aboard, as had been his intention. The Northumberland therefore bore up, and, steering parallel to the french squadron, at the distance of about 400 yards, opened her broadside; receiving in return, as well from the two frigates, as from three batteries on the coast, a very animated and well-directed fire.

land
opens
her fire
upon
french
squa-
dron.

Captain Hotham's object now being to prevent the french frigates from hauling outside the dry rock Graul, the Northumberland had not only to steer sufficiently near to that rock, to leave her opponents no room to pass between it and her, but to avoid running on it herself: a most difficult and anxious duty, the clouds of smoke, as they drifted ahead of the ship, totally obscuring the rock from view. However, by the care and attention of Mr. Hugh Stewart, the master, the Northumberland passed the rock, within the distance of her own length; on the south-west side, in a quarter less than seven fathoms' water; and the two french frigates and brig, as their only alternative, were obliged to steer inside of it. Here there was not water enough to float them; and at 3 h. 45 m. P. M. the two frigates, and in five minutes afterwards the brig, grounded, under every sail, upon the ridge of rocks extending from the Graul to the shore.

North-
umber-
land

shore.

The Arienne lay nearest to the main land; the Mamelouck in a tranverse direction upon that frigate's starboard bow, and the Andromaque ahead of, and considerably without, both her consorts. Having, in the course of a 21 minutes' cannonade, had her sails and rigging considerably damaged, the Northumberland now left the two frigates and brig to the effects of the falling tide, it being then one quarter ebb, and

Hauls
off to
repair
sail
&c.

1812. hauled off to repair her rigging and shift her fore
 May. topsail, which had been rendered entirely useless.

At 4 h. 22 m. P. M., having repaired her principal damages, the Northumberland tacked, and began working up, against a fresh west-north-west wind, to engage the enemy again, and avoid falling to-leeward of the Graul. At 4 h. 48 m. the Mamelouck cut away her mainmast by the board; and just then the Growler was seen rounding the south-east end of Groix under a press of sail. At 5 P. M. the Growler joined, and opened an occasional fire upon the grounded vessels, all of which had by this time fallen over upon the larboard side, or that nearest the shore. At 5 h. 23 m. P. M. the mainmast of the Arienne went by the board. At 5 h. 28 m. P. M. the Northumberland anchored in six and a half fathoms' water, Pointe de Pierre-Laye bearing north-west half-north, the citadel of Port-Louis north-west three-quarters north, and the Graul rock north half-east 400 yards distant; having, by means of a spring, brought her broadside to bear, at point-blank range, upon the two french frigates and brig, lying in the position already described, with their copper exposed to view.

At 5 h. 34 m. P. M. the Northumberland opened her starboard broadside, receiving in return a fire from three or four guns of the Andromaque, and a heavy fire from three batteries on the main; but of which batteries one only, in the judicious station captain Hotham had chosen, was able to reach the ship. At 5 h. 55 m. the Andromaque caught fire in the fore top. At 6 P. M. the flames were spreading fast: her fore topmast then fell, and several boats began pulling from the ship to the shore. At 6 h. 45 m. the main and mizen masts of the Andromaque went by the board. Having kept up a deliberate and careful fire until 6 h. 49 m. P. M., which was near the time of low water, and observing the visible effects of it to be, that the crews had quitted their vessels, that the bottoms of the latter were pierced through with

DESTRUCTION OF THE ARIENNE AND ANDROMAQUE. 73

shot so low down as to ensure their filling on the rising tide, and that the hull of the Andromaque was already in flames, the Northumberland got under way, and stood out of gun-shot of the nearest battery.

The fire from this single battery had done the Northumberland as much injury in the hull, as all the fire to which, in running along the coast engaging the ships and batteries, she had previously been exposed. Her loss, in consequence, amounted to four seamen and one marine killed, one lieutenant, (William Fletcher,) three petty officers, 19 seamen, and five marines wounded; of whom four were wounded dangerously and 10 severely. The Growler, who, when the Northumberland ceased firing, had stood in and opened her fire upon the Arienne and Mamelouck, to prevent their crews from returning on board, suffered neither damage nor loss.

At about 8 p. m. the Andromaque blew up, with an awful explosion, leaving no remains of her visible. At 8 h. 10 m. p. m. the Northumberland anchored out of reach of the batteries on both sides, although a battery on the isle of Groix continued throwing shells. At about 9 p. m. a seaman belonging to a portuguese vessel, which had been taken by the french squadron, having jumped overboard from the Andromaque just before she blew up, swam on board the Northumberland. At 10 p. m. the Arienne was seen to be on fire; and at 11 h. 30 m. p. m. the flames burst forth from the ports and other parts of the hull, with unextinguishable fury. The Mamelouck was at this time on her beam ends, with her bottom completely riddled. Nothing further remaining to be done, the Northumberland, at about 30 minutes past midnight, got under way, with a light air from the northward, and, accompanied by the Growler, stood out to sea. Being retarded in her progress by the calm state of the weather, the Northumberland, at 2 h. 30 m. a. m. on the 23d, witnessed the explosion of the Arienne; and, before the day was over, a third

Their
 de-
 struc-
 tion
 wit-
 nessed
 from
 Lorient

A mortified spectator of this gallant achievement, by which two french 40-gun frigates and a 16-gun brig were driven on shore and destroyed, under the fire of at least one heavy french battery, by a british 74 and gun-brig, lay a fine french two-decker, with sails bent and topgallant yards across, in the harbour of Lorient. Mortified, indeed; for, in the state of the wind, the commanding officer of the port could do no more than send boats to assist in removing the crews of the wrecks. With upwards of 900 men including soldiers on board, what was to hinder these two frigates and brig, when all hopes of escape by running had vanished, from boarding a ship having a crew of about 600 men? Even had the attempt failed, it is not probable that more than one frigate would have been captured: the other, in the confusion, along with the brig, might have reached Lorient; and certainly the loss of men would not have been by any means so great as, although we cannot enumerate it, was sustained by the grounded vessels, both from the fire of the Northumberland and Growler, and from the hurried endeavours of the panic-struck to reach the shore.

Some
 ac-
 count
 of their
 pre-
 vious
 pro-
 ceed-
 ings.

The two french frigates and brig, thus effectually destroyed, had themselves destroyed 36 vessels of different nations, and had taken the most valuable part of their cargoes on board. The frigates, in consequence, were very deep; but, had they drawn no more than their usual water, they still could not have passed clear, as is evident from the brig grounding so close to them. We are happy to be able to state, that lieutenant Weeks of the Growler, and lieutenant John Banks, first of the Northumberland, were each promoted to the rank of commander, for the part he had performed in captain Hotham's exploit.

On the 3d of July, in the afternoon, the british 16-gun brig-sloop Raven, captain George Gustavus Lennox, while hauling over the Droograan, observed

14 brigs, of the french flotilla out of the Scheldt, 1812. exercising to-leeward of the Weiling. Thinking it practicable to cut off some of them, captain Lennox stood into the Weiling, and at 6 h. 15 m. P. M. began firing occasionally at the flotilla in passing. The wind blowing strong on the shore, the superior sailing and working of the Raven enabled her to overtake seven of the brigs; four of which she compelled to anchor close to the surf under the batteries. The remaining three the Raven drove on shore; and at daylight the next morning they were still lying on the beach, apparently bilged, with the sea beating over them. Only one shot struck the Raven, and that did not hurt any one. This dashing little service was performed in sight of the french fleet lying at Flushing; and it must have greatly mortified the french admiral and his captains to see 14 of his brigs, armed each with three or four long 24-pounders, unable, or rather unwilling, to prevent three of their number from being driven on shore by a single british brig, mounting fourteen 24-pounder carronades.

July.
Raven attacks 14 french gun-brigs and drives three on shore.

On the 21st of July, as the british schooner Sealark, of ten 12-pounder carronades and 60 men and boys, lieutenant Thomas Warrand, was cruising off the Start, a signal was made from the shore of an enemy in the south-east quarter. The Sealark immediately made all sail in the direction pointed out, and after a three hours' run discovered a large lugger, under english colours, chasing and firing at two ships, apparently west-indiamen, standing up Channel. As soon as the lugger, which was the Ville-de-Caen, of St.-Maloës, mounting 16 long 4 or 6 pounders, with a crew of 75 men, commanded by M. Cochet, discovered that the schooner approaching her was a cruiser, she quitted the merchantmen and altered her course to starboard, under all possible sail. Finding the Sealark gaining on her, the lugger shortened sail, and wore repeatedly to get to-windward of the schooner.

Sealark chases a lugger privateer.

1812.

July.

Boards
and
carries
the
Ville-
de-
Caen.

Fearing the lugger might succeed and thereby effect her escape, lieutenant Warrant gallantly ran the Ville-de-Caen on board, between her fore and main chains. A close and furious engagement now commenced, both with great guns and musketry, the privateer's men using a profusion of hand grenades to set the schooner on fire: instead of which, however, the lugger set herself on fire. Seeing this, Mr. James Beaver, the Sealark's acting master, at the head of a few men, sprang on board, and almost instantly carried, the Ville-de-Caen, after an action, nearly the whole time sides touching, of one hour and 30 minutes.

Loss on
each
side.

The Sealark had her captain's clerk, (John Purnel,) five seamen, and one marine killed, her commander, one midshipman, (Alexander Gunn,) 17 seamen, and three marines wounded: a very serious loss, it must be owned, especially as several of the wounds were dangerous. The loss on the part of the Ville-de-Caen amounted to her captain and 14 men found dead on her deck, and 16 wounded, most of them severely. The gallantry of this little action obtained for the Sealark's commander that reward, the prospect of which is a never-failing stimulant to deeds of valour, promotion. The case of captain Palmer of the Alacrity* may seem to militate against this principle; but, if we are rightly informed, and we see no reason to doubt our authority, he had his post-captain's appointment in his pocket when he began the action with the Abeille.

Capt.
Stewart
chases
danish
squa-
dron
into the
creek
of
Lyngoe

On the 6th of July, in the evening, as the british 64-gun ship Dictator, captain James Patteson Stewart, accompanied by the brig-sloops Calypso, 18, captain Henry Weir, and Podargus, 14, captain William Robilliard, and gun-brig Flamer, lieutenant Thomas England, was off Mardoe on the Norway coast, the mast-heads of several vessels were seen over the rocks, known to be a danish squadron, consisting of

* See vol. v. p. 535.

DICTATOR & CONSORTS WITH NAYADEN & CONSORTS. 77

the new 40-gun frigate *Nayaden*, carrying 24-pounders on the main deck, and 48 guns in all, and the 18-gun brigs *Laaland*, *Samsoe*, and *Kiel*. Having a man on board the *Podargus* acquainted with the place, captain *Robilliard* volunteered to lead in after the enemy; but the *Podargus* unfortunately took the ground, just as she had entered the passage. Leaving the *Flamer* to attend her, captain *Stewart* stood on with the 64 and the remaining brig. By 7 h. 30 m. P.M. the two vessels, the *Calypso* leading, had arrived within a mile of the danish frigate and her consorts, then running, under a press of sail, inside the rocks. Shortly afterwards the engagement began between the danish squadron and several gun-boats on one side, and the *Dictator* and *Calypso*, which latter, having grounded for a short time, was now astern of her consort, on the other. At 9 h. 30 m. P.M., after having run 12 miles through a passage, in some places scarcely wide enough to admit the *Dictator's* studding-sail booms to be out, Captain *Stewart* had the satisfaction to run his ship with her bow upon the shore, and her broadside bearing, within hailing distance, upon the danish frigate and three brigs, all of whom had anchored close together, with springs on their cables, in the small creek of *Lyngoe*.

The *Calypso* closely followed the *Dictator*; and such was the well-directed fire opened from the two british vessels, especially from the 64, that the *Nayaden*, according to the british official account, was "literally battered to atoms," the three brigs compelled to haul down their colours, and such of the gun-boats, as were not sunk, to seek their safety in flight. Scarcely had the action ended, and the *Dictator* got afloat, than the gun-boats rallied; but the latter were so warmly attacked by the *Calypso*, that they soon ceased their annoyance. Meanwhile the *Podargus* and *Flamer*, which latter had also grounded, were warmly engaged with the shore-batteries and another division of gun-boats. At length, by the indefatigable exertions of their respective officers and crews,

1812.
July.

At-
tacks
Naya-
den and
con-
sorts
and
drives
them
on
shore,
&c.

1812. both the Podargus and Flamer got afloat, very much cut up. At 3 A. M. on the 7th the Dictator, Calypso, and the two prize-brigs, the Laaland, commanded by lieutenant James Wilkie of the Dictator, and the Kiel, by lieutenant Benjamin Hooper of the Calypso, in attempting to get through the passages, were assailed by a division of gun-boats from behind the rocks, so situated that not a gun could be brought to bear upon them from either vessel. In this attack, both prize-brigs, already complete wrecks, grounded; and, notwithstanding every exertion on the part of the lieutenants and men placed in them, they were obliged to be abandoned: that, too, without being set on fire, owing to the wounded men of their crews remaining on board.

Loss on
each
side.

In this very bold and well-conducted enterprise, the British sustained a loss as follows: Dictator, three seamen, one marine, and one boy killed, one midshipman, (John Sackett Hooper,) one captain's clerk, (Thomas Farmer,) 16 seamen, two boys, and four marines wounded; Podargus, her purser, (George Garratt,) one first-class volunteer, (Thomas Robilliard,) and six seamen and one marine wounded; Calypso, one seaman and two marines killed, one seaman wounded, and two missing; and Flamer, one seaman killed, and one midshipman (James Powell) wounded; total, nine killed, 35 wounded, and two missing. The Danes acknowledged a loss, in killed and wounded together, of 300 officers and men. For their gallant conduct on this occasion, captain Weir was immediately, and captain Robilliard in the ensuing December, promoted to post-rank, and the Dictator's first lieutenant, William Buchanan, was made a commander.

Briseis
discovers
a
mer-
chant
ship in
Pillau
roads.

On the 19th of June the british 10-gun brig-sloop Briseis, captain John Ross, by the orders of rear-admiral Thomas Byam Martin, stood into Pillau roads in the Baltic, to communicate with the british merchant ship Urania, and found that she was in possession of the french troops, and that they intended to destroy her if the Briseis approached. Captain

Ross accordingly tacked and stood off, and at mid-1812:
 night detached the pinnace, under the command of }
 lieutenant Thomas Jones, the 2d, with midshipman } July.
 William Palmer and 18 men, to endeavour to
 recapture the ship.

The instant she got within gun-shot of the ship, Her
 the pinnace was fired at by the French on board, pin-
 who had six carriage-guns and four swivels mounted. nace
 But every obstacle was overcome by the gallantry under
 of lieutenant Jones and his small party; who gave lieut.
 three cheers, boarded over the small-craft that were Jones
 alongside, and drove the french troops off the decks gal-
 into their boats which were on the opposite side. lantly
 The cable was then cut, and the Urania was brought boards
 out, together with a french scout that had been and
 employed in unlading her. In executing this dash- brings
 ing service, the British had one seaman killed, her out.
 and Mr. Palmer and one seaman slightly wounded.

On the 16th of July captain Timothy Clinch, of the Capt.
 18-gun ship-sloop Osprey, cruising in company with Clinch
 the 10-gun brig-sloops Britomart and Leveret, cap- of the
 tains William Buckley Hunt and George Wickens Osprey
 Willes, detached a boat from each, under the respec- detach-
 tive commands of lieutenants William Henry Dixon es three
 of the Britomart, William Malone (2) of the Osprey boats
 and Francis Darby Romney of the Leveret, in chase after a
 of a french lugger privateer.
 about nine leagues to
 the north-west of the island of Heligoland.

At 1 h. 30 m. P.M., when the three boats were about Lead-
 five leagues off, the lugger came to an anchor; but, ing
 shortly afterwards, on perceiving the boats, she got boat
 under way and made sail. Lieutenant Dixon then fires at
 cheered the boats, and sallied on until 3 h. 30 m. P.M.; the
 when the Britomart's boat, being ahead, opened her french
 fire, at about musket-shot distance, and received lugger.
 from the lugger, after she had hoisted french colours,
 a fire in return, which wounded one man. The Osprey's
 boat then closed; but lieutenant Dixon considered
 the lugger too powerful to be attempted without the
 aid of the Leveret's boat, then about half a mile

1812. distant. As soon as the latter came abreast of
 } the two remaining boats, it was arranged that the
 July. Britomart's boat should attack the larboard, the
 Leveret's the starboard side, and the Osprey's the
 stern, of the french lugger.

Lieuts.
 Dixon
 and
 Malone
 gal-
 lantly
 board
 and
 carry
 her. The British then cheered and prepared for board-
 ing. At this moment the oars of the Leveret's boat
 got foul of the Britomart's boat, and occasioned
 the former to drop astern. Lieutenants Dixon and
 Malone now grappled the lugger's stern, and, after
 a 10 minutes' obstinate struggle, made good their
 boarding. But it was not until after a 10 minutes'
 further resistance on the lugger's deck, that her
 colours were hauled down. Even then the french
 crew continued firing pistols up the hatchway, and
 wounded one or two of the British. These at length
 silenced the enemy's fire, and hoisted the english
 ensign. The lugger proved to be the Eole, of
 Dunkerque, pierced for 14 guns, but having only
 six mounted, with a crew on board of 31 officers and
 men. In this very spirited enterprise, the British
 sustained a loss, in the two boats that made the
 attack, of two seamen killed, lieutenant Dixon
 (slightly) and 11 men wounded.

Their
 loss on
 the oc-
 casion.

Horatio
 detach-
 es her
 boats
 after a
 danish
 cutter. On the 1st of August, as the british 38-gun frigate
 Horatio, captain lord George Stuart, was in lati-
 tude 70° 40" north, running down the coast of
 Norway, a small sail was seen from the mast-head
 close in with the land; and which, just before she
 disappeared among the rocks, was discovered to be
 an armed cutter. Considering it an object of some
 importance to attempt the destruction of the enemy's
 cruisers in this quarter, lord George despatched the
 barge and three cutters of the Horatio, with about 80
 officers and men, commanded by lieutenant Abraham
 Mills Hawkins, assisted by lieutenant Thomas James
 Poole Masters, and lieutenant of marines George
 Syder, to execute the service. Gaining information
 on shore, that the cutter had gone to a village on an
 arm of the sea about 35 miles distant over land,

Lieutenant Hawkins detached one of the cutters, under master's mate James Crisp, to disperse some small-arm men collected on the shore, and, with the remaining three boats, proceeded for the creek in which the danish cutter lay. 1812.
July.

On the 2d, at 8 A. M., lieutenant Hawkins discovered the vessel, which was the danish cutter No. 97, of four 6-pounders and 22 men, lying at anchor in company with the danish schooner No. 114, of six 6-pounders and 30 men, commanded by lieutenant Buderhorf of the danish navy, the commodore, and an american ship of 400 tons their prize. On the approach of the british boats, the danish vessels presented their broadsides with springs on their cables, and were moored in a capital defensive position. The British, nevertheless, advanced to the attack, and at 9 A. M. received the fire of the Danes; whom, however, lieutenant Hawkins and his party, assisted towards the end by Mr. Crisp's boat, completely subdued, after a most sanguinary combat. Lient.
Haw-
kins
boards
and
carries
a
danish
cutter
and
schoo-
ner.

The British lost in this affair lieutenant Syder, seven seamen, and one marine killed, lieutenants Hawkins and Masters, assistant surgeon James Larans, (mortally,) the boatswain, (William Hughes,) one midshipman (Thomas Fowler, severely,) nine seamen, (one mortally,) and two marines wounded; total, nine killed and 16 wounded. The loss on the danish side was also very severe; amounting to 10 killed and 13 wounded, including the commanders of the schooner and the cutter severely, and some other officers. Both the British and the Danes fought in the bravest manner, and between them sustained a loss, for which the prizes were a poor compensation. As a reward for his gallantry, lieutenant Hawkins was made a commander in the ensuing December. Loss on
each
side.

On the 4th of July, at 6 P. M., Calais cliff bearing south by east distant four miles, the british gun-brig Attack, lieutenant Richard William Simmonds, observed a transport-galliot, a sloop, and a privateer come out of Calais harbour and endeavour to run Lient.

 teer and brings her off. of the privateer. Undaunted by the inequality of
 force, and regardless of a galling fire of musketry,
 Mr. Couney boarded the transport on one side, as a
 detachment from the privateer did on the other;
 but, as soon as Mr. Couney had killed one of their
 men, the Frenchmen retreated to their vessel and
 sheered off, leaving the seven British in possession
 of the prize. The situation of Mr. Couney and his
 six men was extremely critical even after he had
 recaptured the galliot; for, independent of the
 fire of the privateer's musketry, the vessel was
 exposed to a continued fire of round and grape from
 the french batteries; nor could the Attack, on
 account of the calm state of the weather, approach
 to cooperate with her gig's crew in this very gallant
 little exploit. Fortunately neither Mr. Couney,
 nor one of his six men, was hurt on the occasion.

Attack is at- On the 16th of August, at 11 p. m., Foreness in
 tacked by danish gun- the Cattogat bearing west-north-west distant six
 boats. or seven miles, the Attack observed two vessels
 approaching supposed to be gun-vessels. The brig
 immediately cleared for action, and in about 20
 minutes, when nearly becalmed, was attacked by a
 division of danish gun-boats, supposed, in the dark-
 ness that prevailed, to be 10 or 12 in number. The
 engagement continued until 1 h. 40 m. a. m. on the
 19th, when the gun-boats ceased firing. A light
 breeze springing up, the Attack set all sail and got
 out her sweeps, in the hope to be able to join

the Wrangler gun-brig, lieutenant John Campbell Crawford, whom another division of gun-boats had also been attacking. But, owing to a strong south-east current and a total cessation of the breeze, lieutenant Simmonds could not succeed. Shortly afterwards the Wrangler entirely disappeared.

1812.
June.

The Attack had already had her main boom shot away, her foremast and bowsprit badly wounded, two guns dismounted, a great number of shot-holes between wind and water, and her sails and rigging cut to pieces. At 2 h. 10 m. A. M., while the british gun-brig, with only 49 men on board, was employed in refitting herself, 14 danish gun-vessels, each armed with two long 24-pounders and two howitzers, and with from 65 to 70 men, besides four large row-boats carrying swivels and howitzers, formed in a crescent, within pistol-shot, upon her larboard beam, bow, and quarter, and commenced a heavy fire of round, grape, and grenades. The Attack immediately returned the fire, and continued defending herself until 3 h. 20 m. A. M.; when, being a complete wreck and in a sinking state, the british brig hauled down her colours, with two seamen killed, and 12 wounded. The Danes were honourable enough to pay a high compliment to lieutenant Simmonds for his gallant defence of the Attack; and, at the court-martial subsequently held upon him and his officers for the loss of their brig, the most honourable acquittal was pronounced.

render.

On the 4th of June, in the night, captain the honourable Duncombe Pleydell Bouverie, of the 18-pounder 32-gun frigate Medusa, sent the boats of the frigate, under the orders of lieutenant Josiah Thompson, to cut out the french store-ship Dorade, of 14 guns and 86 men, commanded by a lieutenant de vaisseau, lying at an anchor in the harbour of Arcasson. In spite of the rapidity of the tide and the intricacy of the navigation, and although discovered and hailed before they arrived within musket-shot, the boats succeeded in getting along-

son.

1812. side the ship. The Frenchmen were found at their
 June. quarters, and perfectly prepared to defend their
 vessel; but nothing could resist the impetuosity of
 Lieut. Thompson and his men, who rushed on
 Thompson gallantly boards and carries the
 Dorade overboard: among the latter was the french commander, severely wounded.

The prize ground in coming out and is set on fire.

The ship had on board a full cargo of ship-timber, and had been since April, 1811, watching an opportunity to escape. At daylight on the 5th the prize was got under way; but, after proceeding about a league down the harbour, the ship grounded on a sandbank. As the tide was then running out with great violence, lieutenant Thompson was obliged, after taking out the wounded of her crew, to set the Dorade on fire; and the ship soon afterwards blew up. This done, the boats returned to the Medusa, having sustained, in performing their gallant exploit, no greater loss than five men wounded.

Remarks on this case.

Here is another of the abstracted cases. How justly proud might every lieutenant, master's mate, and midshipman have been who assisted in capturing the Dorade; and yet not one is named except the officer who commanded the party. "Captain Bouverie," says the abstract, "highly commends the conduct of lieutenant Thompson and the other officers and men employed on this occasion." To "the other officers," this recommendation could be of no avail, as they were not named; not at least in the Gazette, the only record preserved. And, even had they been named, what could they expect, when their commanding officer, he who so gallantly led them up the side of the enemy's ship, bears still the same rank he bore then?

The manner in which the british 74-gun ship Magnificent, captain John Hayes, on the night of the 16th of December in the present year, was saved in a gale of wind on the coast of France is so extra-

ordinary, and at the same time so creditable to the nautical skill and presence of mind of her captain, and to the expertness, alacrity, and good discipline of british seamen, that we shall be doing, not merely an act of justice to the officers and crew of the *Magnificent*, but a service to the whole profession, by giving all the publicity in our power to an account of the circumstance, which has already appeared in a popular periodical work devoted to naval subjects. "The ship was anchored in the evening between the reef of Chasseron, and the reef of Isle de Ré, nearly mid-channel, in 16 fathoms' water, in the entrance to Basque road; the courses reefed, top-sails close reefed, and top-gallant-yards got down. At 8 o'clock, the weather appearing suspicious, and the wind beginning to blow, the top-gallant-masts were got down on deck: at half-past, it came on squally, and the cable was veered to a cable and a half. At 9, the ship was found to be driving, and in only 11 fathoms' water; the small bower was instantly let go, which brought her up in 10 fathoms. Yards and topmasts were immediately struck, as close down as they could be got. The moon was not to be seen, yet it was not a dark night: it just gave sufficient light to show us our dangerous situation; the sea breaking on the reef, with great violence, about a quarter of a mile astern, and on the star-board quarter. As soon as the topmasts were down, orders were given to heave in upon the best bower, which appeared to be slack, as though the anchor had broken. Three quarters of a cable were got in, when the stock appearing to catch a rock, it held fast: service of course was put in the wake of the hawse, and the cable secured. The inner cable of the best bower was unspliced, and bent to the spare anchor; and a lead-man was kept in the chains to heave the lead, the same as though the ship had been under way, in addition to the deep-sea lead, attended at the gangway by a quarter master, when it was discovered by the man in the chains, that

1812.

Magnificent saved from being wrecked by captain Hayes.

1812. there was a large rock under the ship's bottom, of three fathoms in height: in fact the ground was covered with rocks, and the ship in the midst of them, with the wind at W.S.W. blowing a gale, with small rain and a heavy sea. In this state we remained, with people stationed with axes to the sheet and spare anchors, till daylight, when the man at the deep-sea lead declared the ship to be driving. The spare anchor was directly cut away, and the range taken out; when the ship brought up again, and when the ebb tide made, she took the whole cable service, and rode with the best and small bowers a-head, and the spare anchor broad on the starboard bow. The gale appeared to increase; the sea was high; and, as it broke sometimes outside the ship, it proved she was in the midst of rocks, and that the cables could not remain long without being cut. The wind at this period was west, and St.-Marie church bore east, and the distance where the ship would have gone to pieces, about one cable's length; the shoalest part of the reef about two cables, lying in a S.S.E. and N.N.W. direction. The wind now came to W. b. N.; but, to counteract this favourable change, it was a lee tide, and a heavy sea setting right on to the reef, and neither officers nor men thought it possible, in any way, to cast her clear of the reef, and to make sail, more particularly as the yards and topmasts were down. The captain, however, gave orders to sway the fore-yard two-thirds up; and, while that was doing, to get a hawser for a spring to cast the ship by from the starboard quarter to the spare cable; while this was doing, the spare cable parted, and we had only the sheet anchor at the bows; but, as she did not drive, that was not let go. The main yard was now swayed outside the topmast, two-thirds up the same; as the fore-yard and the spring brought on the small bower cable, people were sent on the yards to stop each yard-arm of the top-sails and courses with four or five spun-yarn stops, tied in a single bow, and to

cast off and make up all the gaskets: the people ^{1812.} were then called down, except one man to each stop, who received very particular orders to be quick in obeying the commands given them, and to be extremely cautious not to let a sail fall, unless that sail was particularly named: if particular attention were not paid to this order, the ship would be lost. The yards were all braced sharp up for casting from the reef, and making sail on the starboard tack. The tacks and sheets, topsail sheets, and main and mizen-stay-sail hal-yards were manned, and the spring brought to the capstan and hove in. The captain now told the people, that they were going to work for life or death; if they were attentive to his orders, and executed them properly, the ship would be saved; if not, the whole of them would be drowned in five minutes. Things being in this state of preparation, a little more of the spring was hove in; the quarter-masters at the wheel and bow received their instructions. The cables were ordered to be cut, which was instantly done; but the heavy sea on the larboard bow would not let her cast that way. The probability of this had happily been foreseen. The spring broke, and her head paid round in towards the reef. The oldest seamen in the ship at that moment thought all lost. The captain, however, gave his orders very distinctly, to put the helm hard a-starboard, to sheet home the fore-topsail,* and haul on board the fore tack, and aft fore-sheet, keep all the other sails fast, square the main and mizen topsail yards, and cross jack-yard, keep the main-yard as it was. The moment the wind came abaft the beam, he ordered the mizen-top-sail to be sheeted home, and then the helm to be put hard a-port—when the wind came nearly aft—haul on board the main-tack, aft main-sheet, sheet home the main-topsail, and brace

* "The yards were all braced up for the starboard tack: consequently, when she cast the other way, the foresail and foretop-sail were set as flat a-back as they could be; and they were not altered in bringing her to her course; the way she was managed it was not necessary."

1812. the cross-jack-yard sharp up. When this was done, (the whole of which took only two minutes to perform,) the ship absolutely flew round from the reef, like a thing scared at the frightful spectacle. The quarter-master was ordered to keep her south, and the captain declared aloud, "The ship is safe." The gaff was down, to prevent its holding wind, and the try-sail was bent ready for hoisting, had it been wanted. The main and mizen staysails were also ready, but were not wanted. The fore-top-mast stay-sail was hoisted before the cables were cut: thus was the ship got round in less than her own length; but, in that short distance, she altered the soundings five fathoms. And now, for the first time, I believe, was seen a ship at sea under reefed courses, and close reefed top-sails, with yards and topmasts struck. The sails all stood remarkably well; and by this novel method, was saved a beautiful ship of the line, and 550 souls. I cannot find any man or officer who ever saw a ship in the state before; yet all seemed surprized that they should never before have thought of it. Indeed it has ever been the prevailing opinion, (perhaps for want of giving the subject proper consideration,) that a ship with yards and topmasts struck was completely disabled from making sail, except with staysails.*

Force
under
sir
Home
Popham.

The british squadron, stationed off the north coast of Spain, to cooperate with the loyal Spaniards and guerillas in expelling the French from their country, was commanded by captain sir Home Popham of the 74-gun ship Venerable; who had under his orders, among some other vessels whose names do not appear, the 38-gun frigates *Surveillante* and *Rhin*, captains sir George Ralph Collier and Charles Malcolm, 18-pounder 32-gun frigate *Medusa*, captain the honourable Duncombe Pleydell Bouverie, and 10-gun brig-sloop *Lyra*, captain Robert Bloye.

In the middle of the month of June a small body of french troops held possession of a hill-fort at

* See Naval Chronicle, vol. xxix. p. 21.

Lequertio, mounting three 18-pounders, and calculated to resist infantry, and another body, of about 200, was posted in a fortified convent within the town, the walls of which were impervious to any thing less than an 18-pounder. The convent might have been destroyed by the ships; but, as the town would have materially suffered, and as the guns of the Venerable made no visible impression on the fort, it was determined to erect a battery on a hill opposite to the latter, which the enemy considered as quite inaccessible to cannon and in that confidence rested his security.

Accordingly, on the forenoon of the 20th, a gun was landed, chiefly by the exertions of lieutenant James Groves of the Venerable, notwithstanding the sea was breaking with such violence against the rocks at the foot of the hill, that it was doubtful whether a boat could get near enough for that purpose. The gun was then hove up a short distance by a movable capstan; but this operation was so tedious, that it was at length dragged to the summit of the hill by 36 pair of bullocks, 400 guerillas, and 100 seamen headed by captain Bouverie. The gun was immediately mounted; and at 4 P. M. fired its first shot. It was afterwards so admirably served, that at sunset a practicable breach was made in the wall of the fort, and the guerillas volunteered to storm it. The first party was repulsed, but the second party gained possession without any considerable loss: several of the french troops escaped on the opposite side and got into the convent. In the course of the evening, the sea abating a little, a landing was made on the island of San-Nicolas, although with some difficulty, by lieutenant Dowell O'Reilly of the Surveillante; a detachment of marines from that frigate, the Medusa, and Rhin also landed, with a carronade from each ship. Captain Malcolm now took command of the island, and captain sir George Collier of the Venerable's battery on the hill. On the 21st, at daybreak, a 24-pounder

meo,
&c.

The squadron afterwards proceeded along the coast to the westward, and destroyed the batteries at Bermeo, Plencia, Algorta, Bagona, el Campillo las Queras, and Xebiles. On the 6th of July the Venerable arrived off Castro; and on the 7th the French were driven out of the town by the fire of the squadron. On the 8th a party landed and took possession of the castle of Castro. On the 10th the squadron proceeded off Puerta Galletta, to cooperate in an attack upon it with the spanish troops under general Longa; but, the enemy being found stronger than the Spaniards had expected, the attack was abandoned. During the morning, captain Bloye landed with a party of marines, and knocked the trunnions off the guns in the Bagona battery: he also destroyed one gun mounted on a height.

Attack
on Gue-
taria.

On the 18th, early in the morning, one 24-pounder under lieutenant Groves, and a howitzer under lieutenant Thomas Lewis Lawrence, of the marine artillery, were landed from the Venerable near Guetaria, and mounted on a hill to the westward of the town, under the directions of captain Malcolm; while captain Bouverie landed a medium 24-pounder and a 12-pounder carronade from the Medusa, and, after many difficulties, mounted these two guns on the top of a hill to the eastward. At noon the Venerable opened her fire and continued it until sunset; when the guns of the enemy opposed to those of the Venerable were silenced, and the Medusa's two guns were got in readiness to open the next morning. During the night, however, intelligence was received of the approach of between 2000 and 3000 french troops. In conse-

Malcolm met with so much detention, that he was }
obliged to leave in the hands of the enemy a mid- }
shipman and 29 men. }
July.

On the 30th of July and on the 1st of August a combined attack was made on the town of Santander and the castle of Ano, by the detachment of marines serving on board the squadron, placed under the orders of captain Willoughby Thomas Lake, of the 74-gun ship *Magnificent*, and captain sir George Collier, and acting in conjunction with the guerillas under general Porlier. The castle was taken possession of by the marines; but, the garrison of Santander having received reinforcements which made it stronger than had been expected, general Porlier was unable to advance upon the place; and the marines, who had pushed on to cooperate in the attack, were obliged to fall back upon the castle, with some loss. Captains Lake and sir George Collier were among the wounded; as was also captain of marines Christopher Noble, who was taken prisoner. On the 3d the French evacuated the town of Santander, and a detachment of marines from the british frigates in the harbour immediately took possession of it.

In the month of May the british force stationed off the coast of Grenada, to assist the spanish patriots, consisted of the 20-gun ships Hyacinth and Termagant, captains Thomas Ussher and William Hamilton, and gun-brig Basilisk, lieutenant George French. In consequence of the destruction, by the Hyacinth, on the 20th, of the castle at Nersa, the guerillas, on the 25th, came down from the mountains and entered the town; and captains Ussher and Hamilton went on shore and waited upon the guerilla leader. By him they learnt that the French had retreated to Almunecar, a town about seven miles to the eastward; and that they had a force of about 300 men,

1812. against whom the guerillas meant immediately to
 May. march.

Terma-
 gant
 and
 squa-
 dron
 silence
 castle

 mune-
 car.

In order to cooperate effectually with them, captain Ussher, at 4 P. M. on the 26th, bore up for Almunecar; and, anchoring his two ships and brig within point-blank range, silenced the castle in less than an hour. The guerillas not advancing as was expected, captain Hamilton, at 8 P. M., went in his gig back to Nersa, and returned at 4 A. M. on the 27th, with information that the guerillas were waiting for an expected reinforcement. At 7 A. M. the french troops, having during the night mounted a howitzer in a breach made by the ships in the covered way to the castle, reopened their fire; but, by 10 A. M., the castle was again silenced, and the French were driven with great loss into the town, where they fortified themselves in the church and houses. Desirous of sparing the unfortunate inhabitants, captain Ussher ceased firing; and at 2 P. M., after having destroyed a privateer, of two guns and 30 or 40 men, at anchor under the castle, weighed and ran down to Nersa, for the purpose of concerting plans with the guerillas.

Convey
 gueril-
 las
 from
 Nersa

 the
 French
 to re-
 treat to
 Grenada.

Having arrived at Nersa, captain Ussher embarked 200 guerilla infantry on board his little squadron, and stood back with them towards Almunecar, having directed the cavalry to hasten through the mountain. The delay occasioned by a calm acquainted the french troops with the combined movement; and, joining a corps of 200 men at Notril, the whole detachment retreated upon Grenada. On arriving at his anchorage before the castle, captain Ussher detached lieutenant Francis Brockell Spilsbury and a guerilla officer, with directions to hoist the respective flags on the castle, and then to demolish the works. After considerable difficulty, owing to the strength of the works, the service was effectually executed.

On the 13th of February, at daybreak, the british 38-gun frigate Apollo, captain Bridges Watkinson

Taylor, while rounding Cape Corse, fell in with and 1812.
 chased the french frigate-built store-ship MÉRINOS; Feb.
 pierced for 36, but mounting only 20 guns, long Apollo
 8-pounders, with a crew of 126 men, commanded chases
 by capitaine de frégate Honore-Cyprien Courdouan, and
 in company with a ship-corvette. After the Apollo cap-
 tures
 had closed from to-leeward, and killed six and Méri-
 nos.
 wounded 20 of the crew of the MÉRINOS, that ship
 hauled down her colours. Notwithstanding the sig- A cor-
 nals for assistance made to her from the MÉRINOS, vette
 the corvette, with the help of boats from the island in com-
 of Corsica, effected her escape. Although, in con- pany
 sequence of the calm state of the weather and her effects
 proximity to the shore, the Apollo was exposed, her
 during four hours, to a fire from a battery on the escape.
 cape and another on the islet of Giraglia, she did
 not have a man hurt.

On the 16th of February the british 74-gun ship Victo-
 Victorious, captain John Talbot, accompanied by rious
 the 18-gun brig-sloop Weasel, captain John Wil- and
 liam Andrew, arrived off Venice, to watch the motions Weasel
 of the new french 74-gun ship Rivoli,* commodore chase
 Jean-Baptiste Barré, and two or three brigs of war, Rivoli
 lying ready for sea in that port. Foggy weather and three
 made it the 21st, before Captain Talbot was enabled brigs.
 to reconnoitre the port. On that day, at 2 h. 30 m.
 P. M., the Victorious descried a brig in the east-north-
 east, and at 3 P. M., in the same direction, a large
 ship, with two more brigs, and two settees. The
 ship was the Rivoli herself; the three brigs were the
 Jéna and Mercure of 16, and the Mamelouck of eight
 guns; and the two settees were gun-boats; all
 about 12 hours from Venice, bound to the port of
 Pola in Istria, and at this time steering in line of bat-
 tle; the two gun-boats and one brig ahead, then the
 Rivoli, and astern of her the two remaining brigs. The
 british 74 and brig were presently under all sail in
 chase, and soon began to gain upon the french
 squadron.

* See p. 64.

1812. At 2 h. 30 m. A. M. on the 22d, perceiving that one
 Feb. of the two brigs in the rear had dropped astern,
 and that the Rivoli had shortened sail to allow her
 to close, captain Talbot hailed the Weasel, and
 Weasel directed captain Andrew to pass the Victorious if
 en- possible, and bring the sternmost brig to action.
 gages Captain Andrew was so prompt in obeying the order,
 Mer- that at 4 h. 15 m. A. M. the Weasel overtook the
 cure and the Mercure, and engaged her within half pistol-shot.
 Jéna. After the action between these two brigs had lasted
 about 20 minutes, the brig that had been in com-
 pany with the Mercure, the Jéna, shortened sail, and
 engaged the Weasel distantly on her bow. Thus
 opposed, the latter still continued a close and well-
 directed fire upon the Mercure until another 20
 minutes had elapsed; at the end of which the french
 Mer- brig blew up. In an instant the Weasel lowered
 cure blows down her boats, but only succeeded in saving three
 up. men, and those much bruised. In the mean while,
 taking advantage of the darkness of the morning and
 the damaged state of the Weasel's rigging, the Jéna
 had made off, and soon disappeared. At daylight,
 however, the british brig regained a sight of both
 french brigs, one a short distance astern of the other;
 and, having by this time refitted herself, she crowded
 sail in pursuit, sweeping occasionally, owing to the
 lightness of the breeze; but the Jéna and Mamelouck
 outsailed the Weasel, and kept gradually increasing
 their distance.

Action At 4 h. 30 m. A. M., just a quarter of an hour after
 com- the Weasel had begun her engagement with the
 mences the Mercure, the Victorious, having a light air of wind
 be- on her larboard beam, arrived within half pistol-shot
 tween of, and opened her starboard guns upon, the Rivoli;
 Victo- who immediately returned the fire from her larboard
 rious broadside, and continued, with courses braild up,
 and but royals set, standing on towards the gulf of
 Rivoli. Triest. A furious engagement now ensued between
 these two line-of-battle ships, interrupted only when,
 for a few minutes together, the fog or the smoke hid

them from each other's view. In the early part of the action, captain Talbot received a contusion from a splinter, that nearly deprived him of his sight, and the command of the ship devolved upon lieutenant Thomas Ladd Peake, who emulated his wounded chief in bravery and judgment. After the mutual cannonade had thus continued for three hours, and the Rivoli, from the superior fire of the Victorious, had become unmanageable and reduced to such a resistance as two quarterdeck guns only could offer, lieutenant Peake, by signal, recalled the Weasel, to have the benefit of her assistance, in case either ship, the Victorious herself being in a disabled state, and both ships at this time in seven fathoms' water off the point of Groa, should happen to get aground. Having bore up in obedience to the signal, the Weasel stood across the bows of the Rivoli; and, at 8 A. M., when within musket-shot distance, poured in her broadside. This the brig, wearing or tacking as necessary, repeated twice. Meanwhile the Victorious maintained a steady cannonade, and at 8 h. 45 m. A. M. shot away the Rivoli's mizenmast. In another quarter of an hour the french 74 fired a lee gun, and hailed the Victorious that she had struck. Point Legnien then bore from the latter north-north-west distant seven miles.

Rivoli
surren-
ders.

The Victorious had her rigging cut to pieces, gaff and spanker-boom shot away, her three topmasts and mainmast badly wounded, her boats all destroyed, except a small punt belonging to the ward-room officers, and her hull struck in several places. Out of her actual crew of 506 men and boys, (60 of the men sick, but only a few absent from their quarters,) she had one lieutenant of marines (Thomas H. Griffiths,) and 25 seamen and marines killed, her captain (slightly,) one lieutenant of marines, (Robert S. Ashbridge, mortally,) two master's mates, (William H. Gibbons and George Henry Ayton,) two midshipmen, (Henry Bolton and Joseph Ray,) and 93 seamen and marines wounded; total, 27

Da-
mage
and
loss on
board
Victo-
rious.

1812. killed and 99 wounded. The Weasel had the good
 Feb. fortune not to have a man hurt, either in her 40
 minutes' engagement with the *Mercure*, or her very
 spirited, and, in all probability, not ineffective
 cannonade of the *Rivoli*.

Same According to the letter of captain Talbot, the
 on board *Rivoli*. *Rivoli* had on board 862 men; but the french
 officers have deposed to only 810, including 59 men
 late belonging to the french frigate *Flore* wrecked
 near Venice. Out of her (taking the smallest
 amount) 810 in crew and supernumeraries, the
Rivoli lost 400 men in killed and wounded, including
 her second captain and the greater part of her officers.
 Not only had her mizenmast been shot away, but
 her fore and main masts were so badly wounded, that
 they fell over the side in a few days after the action.
 In her hull the *Rivoli* was dreadfully shattered; as,
 indeed, the severity of her loss would indicate.

Force The *Victorious* was a 74 of the 18-pounder class, and
 of each was consequently armed on her first and second
 ship. decks in the manner represented at N or O in the
 first Annual Abstract. On her quarterdeck and fore-
 castle, the *Victorious* appears to have mounted 18
 carronades, 32-pounders, and two long 18-pounders,
 and on her poop six 18-pounder carronades; total
 82 guns. The *Rivoli*, on her first and second decks,
 was armed exactly the same as the french 74 in the
 little table at p. 78 of the first volume, and appears
 to have mounted on her quarterdeck and forecastle
 12 long 8-pounders and eight iron carronades,
 36-pounders; total 80 guns, all of french caliber.

Re-
marks
on the
action.

This may be considered as at least an equal match;
 for the slight overplus that appears in the right-

hand set of figures is amply compensated by the ineffective state of the Rivoli's crew. These had but just quitted port for the first time since they had assembled; and yet they fought their ship most bravely, as the length of the action, coupled with their severe loss, testifies, and far from unskilfully, as the loss sustained by their antagonist clearly demonstrates. The Rivoli's commander had the good fortune to be captured by an officer, who could fully appreciate merit in an enemy; and accordingly captain Talbot, in his official letter, expresses himself thus: "I feel great satisfaction in saying, that the conduct of commodore Barré, during the whole of the action, convinced me I had to deal with a most gallant and brave man, and in the manœuvring of his ship a most experienced and skilful officer. He did not surrender his ship until nearly two hours after she was rendered unmanageable, and had 400 killed or wounded, &c."

1812.
April.

Placed under the charge of lieutenants Edward Whyte and John Townshend Coffin, the Rivoli was conducted by the Victorious to Port St.-George, island of Lissa; where both ships arrived on the 1st of March. The Rivoli was afterwards added to the british navy, and captain Talbot, at a subsequent day, was knighted for his gallantry in capturing her. Lieutenant Peake also received the promotion, which was due to him upon the occasion; and, in the month of September, captain Andrew, of the Weasel, obtained his reward in a post-captain's commission.

Talbot
knighted.
ed.

On the 16th of April the british 18-gun brig-sloop Pilot, captain John Toup Nicolas, observing nine coasting vessels hauled up on the beach under the town of Policastro near Cape Palinuro, anchored close to the shore, and opened her fire, in order to drive away any armed force collected for their protection. Captain Nicolas then detached the boats, with a party of seamen and the marines, under the orders of lieutenant Alexander Campbell, assisted by

1812. acting master Roger Langlands. Through the
 April. gallantry of these officers and their men in keeping in check a body of about 80 of the enemy, the whole of the nine vessels were launched and brought off without a casualty, and that in the short space of four hours. On the 28th the Pilot fell in with and harassed a large convoy laden with timber protected by 14 gun-boats and several scampavies; but, from its being perfectly calm, they effected their escape.

Thames and Pilot attack Sapri, take vessels, &c. On the 14th of May the 12-pounder 32-gun frigate Thames, accompanied by the Pilot, attacked the port of Sapri, defended by a strong battery and tower, mounting two 32-pounders, and garrisoned by an officer and 38 men. After being battered for two hours within pistol-shot, the garrison surrendered at discretion; "but," says captain Napier, "in consequence of their gallant defence, I allowed them to march out with the honours of war, but not to serve against us in this expedition." The British found 28 vessels laden with oil, some of them nearly a quarter of a mile in the country; all of which were launched and the battery blown up before sunset. Captain Napier speaks in the highest terms of Mr. Langlands, who, by his able disposition of the Pilot's marines placed under his command, (no officer of that corps being on board the brig,) kept upwards of 200 armed peasantry in check, and had only one man wounded. In a month or two afterwards, Mr. Langlands was promoted to the rank of lieutenant.

Lieut. Dobbs attacks and brings out vessels in Agay. On the 29th of April captain Patrick Campbell, of the 74-gun ship Leviathan, detached the boats of that ship and of the 38-gun frigate Undaunted, captain Richard Thomas, under lieutenant Alexander Dobbs, to attack a french privateer and several merchant vessels in the port of Agay. Lieutenant Dobbs, without any loss, boarded and carried the privateer, a brig of 14 guns and 80 men, lying aground, but could not get her afloat. Four of the

merchant vessels were brought off; but, during the endeavours to get off the privateer, two men were killed and four wounded by the fire of the enemy on the shore; who also succeeded in extinguishing the fire which had been put to the brig.

1812.
April.

On the same day the boats of the Undaunted, along with those of the 38-gun frigate Volontaire, Captain Charles Bullen, and 18-gun ship-sloop Blossom, captain William Stewart, placed under the orders of lieutenant John Eagar of the Undaunted, attacked a french convoy of 26 vessels at anchor near the mouth of the Rhone, brought out seven, burnt 12, including a national schooner of four guns and 74 men, and left two stranded on the beach. This spirited and important service was performed without any loss, the boats having been ably covered and protected by the fire of the Blossom.

On the 9th of May the british 74-gun ships America and Leviathan, captains Josias Rowley and Patrick Campbell, and 18-gun brig-sloop Eclair, captain John Bellamy, fell in with a french convoy of 18 deeply laden vessels, which took shelter under the town and batteries of Languelia. The two captains concurring in opinion as to the practicability of bringing out or destroying the vessels by getting possession of the batteries, the marines of both ships, about 250 in number, were, at daybreak on the 10th, landed to execute the service, under the orders of captains Henry Rea of the America, and John Owen of the Leviathan, assisted by lieutenants John Nearne, William Beddeck Cock, Paul Kyffin Carden, and John George Hill. Unfortunately the landing was not effected without an accident of a very serious nature. The yawl of the America was sunk by a chance shot from the only gun that could bear on the boats; and, before assistance could be afforded, 10 marines and one seaman were drowned.

 May. and judicious manner, the french officer who com-
 one manded falling in the attack. The main body of
 battery the marines, in the mean time, rapidly advancing
 and through a severe fire of grape, carried the battery
 captain adjoining the town of Languelia, consisting of four
 Rea-an- 24 and 18 pounders and one mortar, although pro-
 other, tected by a strong body of the enemy posted in the
 wood and in several contiguous buildings; upon the
 latter of which the guns of the battery were imme-
 diately turned with much effect.

Boats The french troops were now driven from the
 under houses lining the beach by the fire of the Eclair,
 lieut. who had swept in for the purpose. The boats of the
 Rich- squadron, under lieutenant William Richardson, as-
 ardson sisted by lieutenants Bouchier Molesworth and Robert
 bring Moodie of the America, and Alexander Dobbs and
 out Richard Hambly of the Leviathan, also by master's
 vessels, mate John Harvey, and several other young officers not
 named in the despatch, then proceeded to bring out
 the vessels. These were secured by various con-
 trivances to the houses and beach, and the sails
 and rudders of most of them removed on shore.
 After considerable exertions, 16 laden settees were
 towed off, another was burnt in the harbour by the
 boats, and a second, making the 18th, was too much
 damaged by shot to be got afloat. The marines of
 the squadron were reembarked in the most perfect
 order, under cover of the fire of the Eclair, the only
 vessel enabled by the light and baffling winds to get
 close enough to act. This was accomplished with-
 out molestation from the french troops on the spot,
 although a strong party was advancing from the
 town of Allassio to reinforce them.

Loss Exclusive of the heavy loss sustained at the onset
 on the of this dashing enterprise, one sergeant of marines,
 british three privates, and one seaman were killed, and
 side, 18 marines and two seamen wounded; total killed
 and drowned 16, wounded 20.

Another french convoy, of 18 square and lateen

rigged vessels, having assembled at Languelia and Allassio, captain Campbell of the Leviathan, having under his orders the Impérieuse, captain Duncan, 18-pounder 36-gun frigate Curaçoa, captain John Tower, and brig-sloop Eclair, detached the marines under captain Owen, who, covered by the fire of the Eclair, effected a landing between the two towns. Scarcely had the marines formed on the beach, ere they were attacked by treble their number; but nothing could withstand the bravery of the officers and men, who dashed at the french troops with the bayonet, and drove them from two batteries into the town, killing many and making 14 prisoners.

After spiking the guns, consisting of nine and a mortar, and destroying the carriages, the marines embarked; but, although the three ships had anchored within less than musket-shot of the two towns, and the Eclair had kept on her sweeps, going where she could be of most effect, and although the launches and other boats, under the command of lieutenant Dobbs, had with their carronades maintained a heavy fire, the french troops could not be expelled from the houses so as to enable the boats, without a very great risk, to bring off any of the vessels; which were made fast to the shore in all manner of ways, and had their sails unbent and rudders unshipped. The loss already incurred was sufficiently severe, amounting to one seaman and three marines killed, and lieutenant William Walpole, one seaman, and nine marines wounded.

On the 11th of June the french brig-corvette Renard, of fourteen 24-pounder carronades and two long sixes, commanded by lieutenant de vaisseau Charles Baudin des Ardennes, and schooner Goéland, of twelve 18-pounder carronades and two sixes, commanded by enseigne de vaisseau Belin, along with some gun-boats, and a convoy of 14 vessels laden with naval stores for Toulon, sailed from the port of Genoa. On the 15th M. Baudin and his charge were driven for shelter under the island of

1812. June. Sainte-Marguerite by a british squadron, consisting of the America 74, Curaçoa frigate, and brig-sloop Swallow, of sixteen 32-pounder carronades and two long sixes, captain Edward Reynolds Sibly. While the 74 and frigate kept in the offing on account of the shoal water, the Swallow, by signal, stood in to reconnoitre the convoy. On the 16th, at daybreak, the vessels of the latter were observed to be getting under way; and the Renard and Goéland, having a light breeze in-shore, soon made all sail in chase of the Swallow, who lay nearly becalmed. At about 6 A. M., however, finding that the Swallow was benefiting by a light breeze which had just sprung up from the south-west, the french brig and schooner hauled their wind, tacked, and used every exertion, by sweeps and boats to effect their escape. Having at last accomplished their object, they and their convoy stood towards the bay of Fréjus.

Swallow reconnoitres them.

Commences an action with Renard and Goéland.

Is obliged to haul off from the fire of the batteries.

Captain Sibly had now very small hopes of bringing on an action; when, at a few minutes past noon, on the breeze freshening, the Renard and Goéland, having received on board from Fréjus a number of volunteers, along with a detachment of soldiers, again stood off on the starboard tack, the schooner keeping a little to-windward of her consort. The Swallow being at this time ahead on the opposite tack, the two parties neared each other fast. At 1 P. M., finding she could weather the Renard, the Swallow closed, and, passing her to-windward within 30 yards, gave and received a broadside. Captain Sibly then wore close under the french brig's stern, in the hope of keeping her head off shore; but, having had her own head-braces shot away, the Swallow was not able to lie so close to the wind as her captain intended. The Renard consequently got round on the larboard tack, and in that position was furiously cannonaded by the Swallow to-leeward. The Goéland, meanwhile, had taken an annoying position out of the reach, except occasionally, of the british brig's guns. After the Swallow had sustained, during

40 minutes, the close and determined attacks of her two opponents, the larger of whom made several attempts to board, the proximity of the shore, and the strength of the batteries that lined it, compelled captain Sibly to haul off and rejoin his commodore in the offing. The Renard and Goéland then stood on under all the sail they could set, and were presently at anchor with their convoy in the bay of Grimaud.

1812.
June.

The Swallow was much cut up in sails, rigging, masts, and hull; and, of a crew of 109 out of 120 men and boys, lost six seamen and marines killed, and 17 wounded, including the purser, Mr. Eugene Ryan, who had gallantly volunteered to serve on deck. The Renard was much injured in her masts and most severely shattered in her hull; especially on the starboard side. Her loss, out of the 94 men that constituted, as it appears, her regular crew, was 14 men killed and 28 wounded; including among the latter her gallant commander, who was struck by a splinter upon the stump of the arm which some years before he had honourably lost. The total number of persons on board the Renard at the commencement of the action, consisting partly of troops as already mentioned, is represented to have been 180. The loss sustained by the Goéland, whose crew is stated to have consisted of 113 men, does not appear in M. Baudin's letter; and yet, as the schooner, at one time in particular, was exposed to a close and well-directed fire from five of the Swallow's carronades, loaded each with 64 pounds of double canister and 32 of musket-balls, making 96 pounds in all, a considerable slaughter must have ensued.

Loss on board Swallow.

Also on board Renard and Goéland.

That this was an affair very creditable to captain Sibly, the officers, and crew of the Swallow, cannot admit a doubt; and that the latter would have made a prize of the Renard, had she not run for protection to the batteries, is, from a review of all the circumstances, equally clear. And yet some dozens of cases have been passed over, to celebrate

Remarks on M. Dupin's account of this action.

1812. this as an action glorious, in the extreme, for the
 Aug. navy of France. "The Renard," says a well-known
 french writer on english subjects, "of the same
 force as the Abeille, escorting a convoy in the gulf
 of Genoa, meets the Swallow, of the same force as
 the Alacrity. A frigate and an english ship of the
 line are in view; it matters not: the Swallow must
 fly, or be taken, before she can be succoured. A
 furious combat ensues between the two brigs, and
 the Swallow avoids her inevitable capture, only by
 flying for protection, under all sail, to the two large
 vessels, who are also crowding sail to save her."*
 This is M. Dupin; who reads english, and writes
 liberally, except where national self-love sways his
 pen.

Min- On the 10th of August the british 20-gun ship
 strel, captain John Strutt Peyton, and 18-gun
 and Philo- brig-sloop Philomel, captain Charles Shaw, observed
 mel three small french privateers in the port of Biendom,
 block- near Alicant; where they were protected by a castle
 ade three mounting 24 guns. As a further security, two of the
 french vessels were hauled on shore, and a battery formed
 priva- with six of their guns, which were manned with their
 teers united crews, amounting to 80 men, chiefly Genoese.
 In Bien- Under these circumstances the british ship and brig
 dom. could only blockade the privateers; and, to do this
 more effectually, a boat was sent from one or the
 other of them every night, to row guard near the
 shore.

Mr. On the 12th of August a boat, with midshipman
 Dwyer (or rather lieutenant, for he had been promoted since
 with seven the 21st of the preceding March, but had not yet
 men, attacks received his appointment) Michael Dwyer and seven
 and seamen, departed from the Minstrel upon this service.
 carries Considering that, if he could take the battery on the
 a bat- beach, he might succeed in capturing the privateers,
 tery. the midshipman questioned the Spaniards, who came
 off in boats from the town; and they all agreed in the

* For the original passage see Appendix, No. 4.

relation, that the French had retreated, leaving but 30 men in the battery and 20 in the castle. Relying upon the tried courage and steadiness of his seven men, Mr. Dwyer resolved, notwithstanding the numbers of the enemy, to attempt carrying the battery by surprise. With this view, at 9 h. 30 m. P. M., he and his little party landed at a spot about three miles to the westward of the town; but scarcely had they done so, than they were challenged by a french sentinel. The midshipman, with much presence of mind, answered in spanish, that they were peasants. The British were suffered to advance, and, arriving at the battery on the beach, attacked it without hesitation. After a smart struggle, the garrison, consisting not of 20, but of 80 Genoese, abandoned the battery to Mr. Dwyer and his seven seamen.

The British were a few minutes only in possession, before they were surrounded by 200 french soldiers. Against these Mr. Dwyer and his seven men defended themselves until one of the latter was killed, the midshipman shot through the shoulder, and a seaman through the eye, and all their ammunition expended. The moment the firing ceased, the French rushed upon the garrison with their bayonets. Mr. Dwyer was too weak, from loss of blood, to sustain a hand-to-hand fight; and, after he had been stabbed in 17 places, and all the men except one severely wounded, the French recovered possession of the battery. The gallant fellow who was wounded in the eye, on recovering from the stupefaction caused by the wound in his head, deliberately took his handkerchief from his neck, and, binding it over the wound, said, "Though I have lost one eye, I have still one left, and I'll fight till I lose that too."

The admiration of captain Foubert and his troops, a detachment from the 117th regiment of voltigeurs, at the invincible courage of the little band of British, was unbounded; and when the latter, in their wounded state, were conveyed to the head-quarters of general Goudin, the french commanding officer in

1812.
Aug.

Is surrounded by 200 French and compelled to surrender.

Noble behaviour of the french commanding officer.

1812. this quarter, the same benevolence and solicitude
 Aug. were shown to them by him and his suite. The general sent an invitation to captain Peyton to visit him on shore, and receive in person as well his brave boat's crew, as the congratulations of the general and the other french officers on having such men under his command. Captain Peyton accepted the invitation, dined with the french general, and received back his midshipman and six out of his seven men. Thus is it ever, that the brave sympathize with the brave; and he, who gallantly does his duty, meets far from the most inestimable part of his reward, in the admiration which he elicits from the breast of his enemy.

Capt. Peyton detaches boats of Minstrel to Valencia. On the 29th of September, in the evening, having received information that the French had laden six vessels with shells at Valencia for Peniscola, captain Peyton despatched the boats of the Minstrel, under lieutenant George Thomas, assisted by midshipmen William Lewis, B. S. Oliver, and Charles Thomas Smith, to endeavour to bring them out; keeping the ship close in shore to cover and protect the boats. Although the vessels were moored head and stern to the beach, between two batteries of two 24-pounders and two mortars, with a strong garrison in the Grao, and had their sails unbent and rudders unshipped, lieutenant Thomas and his party gallantly succeeded in bringing out four of them. A fifth was also in the possession of the British; but, owing to the wind suddenly shifting round to the south-east with a heavy squall, this vessel grounded, and was retaken with three men in her. With that exception, the loss sustained by the British amounted to only one seaman severely wounded.

Lieut. Thomas brings out four vessels. On the 31st of August, as the british 38-gun frigate Bacchante, captain William Hoste, lay at anchor off Rovigno on the south-west coast of Istria, information arrived, that several vessels, laden with ship-timber for the venetian government, were at Port-Lemo. Captain Hoste, on the same evening,

Bacchante detaches her boats into Port-Lemo.

despatched the Bacchante's boats, five in number, 1812. ^{Aug.} containing 62 officers and men, under first lieutenant Donat Henchy O'Brien, assisted by lieutenant Frank Gostling, lieutenant of marines William Haig, master's mate George Powell, and midshipmen James Leonard Few and Thomas William Langton.

Having captured two merchant vessels at the entrance of the port, lieutenant O'Brien received information, that the vessels, which he was going to cut out, lay under the protection of a french xebec of three guns, and two gun-boats. Notwithstanding this unexpected force, he left his two prizes in charge of Mr. Langton and six seamen, and, with the remaining 55 men, dashed on to the attack. The skill and gallantry of the commanding officer and his party carried all before them; and the British captured, without the loss of a man, as well the timber-vessels, seven in number, as the french xebec Tisiphone, of one 6 and two 3 pounders and 28 men, a gun-boat of one 8 and two 3 pounders and 24 men, and another of one 8-pounder and 20 men, intended for the protection of the trade on the coast of Istria, from Pola to Triest. ^{Lieut. O'Brien captures three gun-boats, &c.}

On the 18th of September, at daybreak, cruising off the coast of Apulia, the Bacchante discovered and chased an enemy's convoy between the islands of Tremitti and Vasto, standing alongshore to the north-west. Baffling winds and calm weather preventing the frigate from closing, captain Hoste despatched his boats, six in number, containing 72 officers and men, under the command, as before, of his first lieutenant, assisted by lieutenant Silas Thomson Hood, second of the Bacchante, instead of lieutenant Gostling. On the approach of the boats, the 18 merchant vessels anchored, and hauled themselves aground, leaving outside for their protection eight armed vessels, each mounting one long 12-pounder, three of them with three swivels each and 16 men, the remainder with 12 men; making, in all, eight long 12-pounders, six swivels, and 104 men. ^{Bacchante detaches her boats after another convoy}

1812. Besides these, there were the crews of the merchant
 Sept. vessels, who, having disembarked, lined a thick
 wood, well adapted for bush-fighting and completely
 commanding the coast.

Lieut. In this situation, the convoy and vessels of war
 O' Brien confidently awaited the british boats; but the officers
 again and men in these, led on as they were, were not to
 suc- be so daunted. Pushing through a heavy fire of
 ceeds in grape and musketry, the seamen rushed like lions to
 bring- the attack, boarding and carrying the vessels, and
 ing out driving their crews over the sides in every direction;
 the while the marines, headed by their intrepid leader,
 vessels. lieutenant Haig, landing, forced the fugitives from
 the wood, and secured the possession of the whole
 convoy and the armed vessels protecting it. To
 enhance the valour of this second exploit of lieu-
 tenant O'Brien and his brave associates, it was
 achieved with so trifling a loss on their part, as two
 seamen wounded, and those not dangerously.

Eagle On the 16th of September, in the evening, the
 detach- british 74-gun ship Eagle, captain Charles Rowley,
 es her having anchored off Cape Maistro near Ancona, the
 boats latter despatched lieutenant Augustus Cannon, with
 after a the three barges, to intercept the enemy's coasting
 convoy. trade. On the morning of the 17th lieutenant Cannon
 perceived a convoy of 23 sail, protected by two
 gun-boats, standing towards Goro. As the barges
 intrepidly advanced, the convoy, each vessel of which
 was armed with a 6 or an 8 pounder, drew up in line
 of battle, under cover of a 4-gun battery and the
 beach lined with armed people, having also the two
 gun-boats advanced in front.

British The British, in the most gallant manner, and
 cap- notwithstanding that their boats, owing to the shal-
 ture lowness of the channel, grounded frequently in their
 and de- advance, attacked and carried the largest gun-boat;
 stroy the and then, turning her guns upon the second gun-
 whole boat, captured her and all the convoy but two, which
 along effected their escape. Not being able to man all his
 with prizes, lieutenant Thomas Colson Festing, who had
 two gun-boats.

succeeded to the command in consequence of lieutenant Cannon having been mortally wounded, burnt ^{1812.} ^{Feb.} six and brought out the remaining 17, including the two gun-boats. Besides lieutenant Cannon mortally wounded, and who died on the 22d, there was one seaman killed, another mortally, and three slightly wounded. Lieutenant Festing, it appears, still holds the same rank that he did, when he succeeded to the command in this successful and truly gallant exploit.

On the 2d of February, as the british 12-pounder Sir 32-gun frigate Southampton, captain sir James Lucas James Lucas Yeo, was lying in the harbour of Port-au-Prince, Yeo resolves to de- Saint-Domingo, intelligence arrived, that a large tain a frigate, a corvette, and a brig of war, belonging haytian frigate. neither to Petion, nor to his rival chief Christophe, but to a third party, formed out of revolvers from both, were cruising on the south side of the adjacent island of Guanaboa. Although bound by his instructions to respect the flags of Petion and Christophe, sir James had received no orders to acknowledge any other haytian flag; he considered also that, if the squadron was allowed to quit the bight of Leogane, the commanding officer would be less scrupulous about the national character, than about the lading, of the merchant vessels he might fall in with; in short, that M. Gaspard, well known as an experienced privateer's man, might feel it to be his interest to turn pirate.

Those, who communicated the information respecting this frigate, pointed out, in reference to the Southampton, her superior force, particularly in men, proceeds from of whom the number was stated to be upwards of 600. Port- Far from deterring such a man as sir James Lucas an- Prince Yeo, all this stimulated him the more to execute a service which, hazardous as it might be, a sense of duty taught him was necessary; and accordingly, in the night, the Southampton weighed her anchor, and inquest of Amé- thyste.

1812. } proceeded in quest of this formidable frigate and her
Feb. } two consorts.

Force
of the
two fri-
gates.

Some account of the force of the two frigates may here be introduced. The Southampton was at this time the most ancient cruiser belonging to the british navy, having been built since the year 1757.* The Améthyste was the late french frigate *Félicité*, captured in June, 1809, when armed en flûte, by the british frigate *Latona*.† She was deemed unfit for the british navy, and was sold, as already stated, to an agent of Christophe's: to whose little navy she was afterwards attached. Treachery, or something of the kind, subsequently removed her into the possession of M. Borgellat; who had assumed the command of the department of the south in Saint-Domingo, upon the death of the revoler Rigaud. The frigate's name was then changed from Améthyste to *Heureuse-Réunion*; but, in all the accounts respecting her, she is called Améthyste. The Southampton mounted 38 guns, including ten 24-pounder carronades and two sixes; and the Améthyste, 44 guns, consisting of 18 long french 12, and eight long 18, pounders on the main deck, and four long 12-pounders and 14 carronades, 24-pounders, on the quarterdeck and forecastle.

Sir
James
hails
the
frigate.

On the 3d, at 6 A. M., having arrived off the south side of Guanaboa, the Southampton fell in with the Améthyste, the corvette, and the brig. On hailing the Améthyste, sir James was answered, "From Aux-Cayes." He then sent on board, to request the captain of the frigate to wait upon him with his papers. Captain Gaspard declined doing this; but sent his first lieutenant, with a paper, purporting to be an order to cruise, and signed, "Borgellat, general in chief of the south of Hayti." Knowing of no authority that this M. Borgellat had to send armed vessels to sea, sir James replied, that he felt it to

* See vol. i. p. 41.

† See vol. v. p. 241.

be his duty to conduct the frigate and the two vessels in her company to Port-Royal, Jamaica, that the british commander in chief on the station might determine upon the validity of M. Borgellat's claim; and he gave the captain of the Améthyste five minutes to consider the message. A lieutenant of the Southampton accompanied the lieutenant of the Améthyste back to his ship, in order to wait the time; but, before three minutes had elapsed, captain Gaspard acquainted the former, that he would rather sink than comply with the demand: he requested, however, that, if the british captain really meant to enforce his demand, he would fire a gun ahead of the frigate.

com-
pany
South-
ampton
to Port-
Royal.

As the boat of the Southampton pulled round her stern towards the opposite gangway, the unsuccessful result of the mission was communicated. Off went the bow gun; and in another instant, then just 6 h. 30 m. A. M., the second and remaining guns upon the Southampton's broadside followed in rapid succession. The fire was returned; the action proceeded; and, aware of what was the chief arm of her strength, the Améthyste made several efforts to board; but the Southampton, by her superiority in manœuvring, frustrated every attempt. It had always been an essential point in sir James Yeo's system of discipline, to practise his men at gunnery; and they now gave unequivocal proofs of the proficiency to which they had attained. Before the cannonade had lasted half an hour, the main and mizen masts of the Améthyste had fallen; and her hull soon became riddled from stem to stern. Still the desperate crew continued a feeble and irregular fire. The two consorts of the Améthyste, in the mean time, had made sail, and were running for shelter under the batteries of Maraguana. At 7 h. 45 m. A. M., desirous to put an end to what now could hardly be called a contest, sir James Yeo hailed to know if the Améthyste, whose colours had long been shot away, had surrendered. Some one on board replied in the affirmative; and

South-
ampton
attacks
and
cap-
tures
her.

1812. the Southampton ceased her fire. Scarcely had she done so, ere the foremast and bowsprit of the Améthyste went by the board.

Loss on
each
side.

A proof of the inexperience of the crew of the latter, and of the confusion into which they had been thrown by the smart and destructive fire of their antagonist, may be seen in the Southampton's loss; which, out of a crew of 212 men and boys, amounted to only one seaman killed, and a midshipman and nine seamen and marines wounded. On the other hand, the Améthyste, out of a crew of 700 men, (Frenchmen, Americans, Haytians, a motley group of almost every nation,) had 105 killed and 120 wounded, including among the latter her captain, M. Gaspard. The whole of the surviving crew, except about 20 men, were landed at Maraguana, Petite-Goëve, and Port-au-Prince; and the frigate, under jury-masts, fitted to her while she lay in Port-au-Prince, proceeded, in company with the Southampton, to Port-Royal, Jamaica. On a subsequent day the Améthyste was restored to Christophe; and the conduct of sir James Yeo, in all he had done, was approved by his commander in chief.

Ameri-
ca the
carrier
of
France
and
Hol-
land.

When the belligerents of Europe, opposed to England, had their commerce swept from the ocean by the armed ships of the latter; when there was every probability that Buonaparte would soon be compelled to curb his ambitious temper and restore to Europe the blessings of peace, neutral America stepped forward, and hired herself to be the carrier between the colony and the parent-state. The consequence in a little time was, that, although not a single merchant vessel belonging to France or to Holland crossed the Atlantic or doubled the Cape of Good Hope, the products of the western and the eastern world sold cheaper in their markets than they did in those of England, who sent her ships wheresoever she pleased. Thus relieved, France pushed on the war with vigour, and neutral America prospered by fanning the flames. This moral and religious people

actually grew rich and great, commercially great at least, out of that which depopulated Europe, which robbed the wife of her husband, and the child of its father. 1812.

Every citizen of every town in the United-States, to which a creek leads that can float a canoe, becomes henceforward a "merchant;" and the grower of wheat or tobacco sends his son to the counting-house, that he may be initiated in the profitable art of falsifying ships' papers and covering belligerent property. Here the young American learns to bolt custom-house oaths by the dozen, and to condemn a lie, only when clumsily told, or when timorously or inadequately applied. After a few years of probation, he is sent on board a vessel as mate or supercargo; and, in due time, besides fabricating fraudulent papers and swearing to their genuineness, he learns (using a homely phrase) to humbug british officers, and to decoy, and make american citizens of, british seamen. The merchant's hope of gain, in these trips to and from the port of one belligerent, resting mainly on a quick passage and a careful avoidance of the cruisers belonging to the other, the american vessel is constructed and fitted in the best manner for sailing; and, having no convoying ship of war to show him the way, the american master becomes, of necessity, a practical navigator of the first order.

When England, at length, began her attempts to check this intercourse between her enemy and neutral America, neutral America grumbled, and, resorting to new subterfuges, went on. Other restrictions followed. Then came loud complaints, mixed with threats. Napoléon, next, began to feel the effects of England's restrictive system. Her proclamation, issued on the 16th of May, 1806, declaring the ports of France from the Elbe to Brest in a state of blockade, provoked the french emperor, on the 21st of the succeeding November, to fulminate from Berlin his sweeping decree; declaring the british islands in a state of blockade; ordering all british letters, subjects, and property to be seized; pro-

1812.  hibiting all trade in british produce and manufactures ; and pronouncing all neutral vessels, that had touched in England or in any of her colonies, liable to confiscation.

British orders in council This was, at once, an extinguisher upon all neutral nations : it was tantamount to a declaration of war against neutral America ; but neutral America blamed, not her dear France, but England. There can be no doubt that, in retaliation for such a violation of all public law, England would have been justified in laying waste the french coast with fire and sword ; but she contented herself with issuing, on the 7th of January, 1807, an order in council, directing that no vessel should be permitted to trade from one port to another, in the possession of France or her allies. Finding that this order did not produce the expected effect, England, on the 11th of November in the same year, issued another ; in which, imitating France in her extravagant tone, she declared all the ports of her enemies, both in Europe and the colonies, in a state of blockade. This was followed by the Milan decree of December 17, 1807 ; by which every vessel that should have submitted to be searched by an english ship, or paid any tax to the english government, was declared to be denationalized, and to have become british property, and therefore lawful prize ; and every ship sailing from England or her colonies, or from any country occupied by her troops, was also to be made lawful prize ; but, says the arch framer, " these measures shall cease to have any effect, with respect to all nations, who shall have the firmness to compel the english government to respect their flag."

America resolves to go to war with England. The object of this proviso was too palpable to be misunderstood. Accordingly, after a few years of growling and snarling ; when, owing to the vigour of the british arms by sea and land, not a colony remained to France or her allies in either hemisphere ; when, the neutral trade being extinct, american ships were rotting at their moorings, and the untrodden wharfs of New-York and Philadelphia,

becoming choked with grass and weeds, America ^{1813.}
boldly cast off her neutral disguise, and resolved, in ^{April.}
the language of the noble race she had displaced,
to "take up the hatchet" and go to war. With
whom, was the next point to be considered. This,
like every thing else in the United States, was to be
settled by a calculation of profit and loss. France
had numerous allies; England scarcely any. France
had no contiguous territory; England had the Ca-
nadas ready to be marched into at a moment's notice.
France had no commerce; England had richly-laden
merchantmen traversing every sea. England, there-
fore, it was, against whom the deadly blows of
America were to be levelled.

On the 14th of April, at a secret sitting of con- ^{De-}
gress, an act passed, laying an embargo on all ships ^{clares}
and vessels of the United States, during the space of ^{war.}
90 days; for the purpose, no doubt, of lessening
the number of vessels that would be at the mercy of
England when war was formally declared. By the
end of May most of the fastest sailing ships, brigs,
and schooners in the american merchant service were
fitted or fitting as privateers; and many lay ready
to sail forth, the instant the tocsin of war should be
sounded. They had not to wait long. The presi-
dent's message to congress of the 1st of June was
the preparative; and an act of congress, which
passed on the 18th, declaring the "actual existence
of war between the United Kingdom of Great Britain
and Ireland and the United States of America,"
struck the blow.

Although New-York is 240 miles from Wash- ^{Com-}
ington, the american seat of government, commodore ^{mo-}
Rodgers received his instructions in sufficient time ^{dore}
to get under way from the harbour of the first- ^{Rod-}
named city on the morning of the 21st, with the ^{gers}
President and United-States frigates, the latter ^{sails}
commanded by commodore Stephen Decatur, the ^{from}
18-pounder 36-gun frigate Congress, captain John ^{New-}

^{York.}

1812. Smith, 18-gun ship-sloop *Hornet*, captain James
 June. Lawrence, and 16-gun brig-sloop *Argus*, captain
 Arthur Sinclair; and, by evening, the american
 squadron was clear of Sandy-Hook lighthouse.

Pro- The first object of commodore Rodgers was to get
 ceeds in possession of a fleet of about 100 sail of homeward-
 in bound Jamaica-men, known to be not far from the
 search of Ja- coast, under the protection of so comparatively small
 maica a force as the british 18-pounder 36-gun frigate
 fleet. *Thalia*, captain James G. Vashon, and 18-gun brig-
 sloop *Reindeer*, captain William Manners. This
 fleet had sailed from Negril bay, Jamaica, on the
 20th of May, under the additional convoy, as far as
 Cape Antonio, of the 64-gun ship *Polypheumus*, cap-
 tain Cornelius Quinton, and had passed Havana on
 the 4th of June. On the 23d, at 3 A. M., the com-
 modore spoke an american brig, bound from Madeira
 to New-York, and was informed by her that, four
 days before, in latitude 36°, longitude 67°, she had
 passed the Jamaica fleet, steering to the eastward.
 In that direction the american commodore immedi-
 ately steered.

Falls At 6 A. M., Nantucket shoal bearing north-east
 in with distant 35 miles, and the wind blowing moderately
 Belvi- from the west-north-west, a large sail was descried
 dera. in the north-east, standing directly for the american
 squadron. This was the british 18-pounder 36-gun
 frigate *Belvidera*, captain Richard Byron; who,
 until her discovery, a few minutes before, of the
 strangers approaching her, had been lying to, waiting
 to intercept the french privateer-schooner *Marengo*,
 hourly expected from New-London. At 6 h. 30 m.,
 just as the *Belvidera*, having arrived within six miles,
 had made out the three largest ships to be frigates,
 they and the sloops, by signal from the commodore,
 hauled to the wind on the starboard tack in chase.
 The british frigate immediately tacked from the
 strangers; and at 8 h. 15 m. A. M., finding the private
 signal not answered, captain Byron made all sail,

keeping away to about north-east by east. At 11 A. M. the wind began to decrease and draw more to the westward. At 11 h. 30 m. the Belvidera hoisted her colours; and immediately afterwards the american squadron did the same, the two commodores also displaying their broad pendants.

Having now ascertained that the squadron approaching belonged to a "friendly power," captain Byron would probably have shortened sail, to allow the american van-ship to close; but a New-York pilot-boat had a few days before spoken the Belvidera, and informed her of what was likely to happen. Coupling this with the persevering efforts of the american commodore in the chase, captain Byron no longer doubted the hostility of his intentions. The Belvidera, as a matter of course, had cleared for action and loaded her guns, and had shifted to her stern ports two long 18-pounders on the main deck and two 32-pounder carronades on the quarterdeck; but, although the cartridges of the guns were pricked, the priming was not laid on. This was done, by captain Byron's express orders, to prevent the possibility of any such charge being brought against the Belvidera, as had been made so much of in the case of the Little-Belt.

The wind, which since 2 P. M. had veered to west-south-west, and was therefore nearly aft in the course the ships were steering, (about north-east,) began gradually to fall. This of course favoured the ships astern; and at 4 h. 20 m. P. M., being the van-ship of her squadron and distant about 600 yards astern, or rather, about half a point on the larboard and weather quarter, of the Belvidera, the President opened a fire from her bow guns. The first three shot all took effect in the british ship's hull: one struck the rudder-coat, and the others entered the counter and transom, but hurt no one, the men being above at quarters. A fourth shot struck the muzzle of the larboard chase 18-pounder, and, breaking into several pieces, killed one seaman, wounded mortally another, severely

1812. two others, and slightly a lieutenant, (William Henry
 June. Bruce,) in the act of pointing the gun, and two sea-
 men standing near him. In five minutes after the
 President had commenced her fire, the Belvidera re-
 turned it from her stern-chasers. At 4 h. 30 m. P.M.
 One of her guns burst and wounds com-
 modore Rodgers. m-
 modore
 Rodgers.
 severely in the leg; and the main and fore-castle
 decks near the gun were so much shattered, as to
 prevent the use, for a considerable time, of a chase-
 gun on that side.

After having, owing to the accident, suspended
 firing for 10 minutes, the President put her helm
 a-starboard and discharged her starboard main-deck
 guns; the shot from which (all single) did consider-
 able injury to the rigging and sails of the Belvidera,
 but scarcely touched her hull. The most serious acci-
 dent, which now befell the Belvidera, was the frequent
 breaking of the long-bolts, breeching-hooks, and
 breechings, of the long guns and carronades; by a
 blow from one of which latter, captain Byron re-
 ceived a severe contusion in the inside of his thigh,
 a little above the knee. Nothing, however, could
 exceed the alacrity of the crew, as well in refixing
 and securing the guns, as in splicing and knotting
 the damaged rigging. In the mean while the captain
 and his senior lieutenant, John Sykes, personally
 superintended the pointing of the quarter-deck chase-
 carronades; while the 18-pounders in the cabin were
 equally well served under the direction of lieutenants
 Bruce and the honourable George Pryce Campbell.
 This was a duty of some importance, as it was upon
 the nicety of the aim that their hopes of escape in
 a great degree rested.

Fires a second broad-
 side. At 5 P. M., being much annoyed by the steady
 stern-fire of the British frigate, the President again
 put her helm a-starboard, and fired her main-deck
 guns, at the distance, now, of rather less than
 400 yards: she then renewed her course in the

Belvidera's wake, receiving, as before, an animated fire from the latter's stern-chasers. Notwithstanding that the Belvidera had by this time had several of her backstays, main shrouds, and studding-sail halliards shot away, and her cross-jack yard badly wounded, the crew, under the direction of Mr. James Kerr, the master, repaired the one and fished the other; so that the ship had lost very little of her advantage in the chase.

At 6 h. 20. m. P. M. the President again endeavoured to free herself from the galling stern-fire of her persevering opponent, (who, from her two cabin 18-pounders, fired upwards of 300 round shot,) by luffing up athwart the Belvidera's stern and discharging two broadsides; neither of which, however, produced much effect. About this time the Belvidera gave a broad yaw to starboard, with the intention of firing her broadside; but, the President quickly answering her helm, no guns would bear with effect, and none were discharged. Yet commodore Rodgers, in his journal declares, that the Belvidera's "four aftermost guns were fired, without bearing within 25 or 30 degrees of the President."

Finding that the President was now getting so near, that she had it at her option to run alongside and bring on a close action, the Belvidera, at 6 h. 25 m. P. M., cut away one bower, one stream, and two sheet anchors; and, in five minutes more, the latter got so far ahead of the President, owing chiefly to the latter yawing about instead of steering a direct course, that the american frigate ceased her fire. This apparently shy conduct on the part of the President, coupled with the damaged state of her rigging and sails, enabled the Congress to get abreast of her; and at 6 h. 30 m. P. M. that frigate opened her fire, but, finding her shot fall short, almost immediately desisted. In the mean time the Belvidera, for the same reason, had ceased her fire; and, to get clear of this second opponent, started 14 tons of water, and threw overboard her yawl, barge, gig, and jollyboat. The good effect of

1812. this was soon visible; and the british crew now
 June. devoted their principal attention to fishing their ship's
 main topmast, which was badly wounded. By 8 p. m.
 the Belvidera was two miles ahead of the american
 van-ship. At 11 p. m. captain Byron altered his
 course from north-east to east-south-east, and set his
 starboard studding-sails. At 11 h. 25 m. p. m. the
 American commodore gives up the chase.
 President, who was still the leading frigate of her
 squadron, and now about three miles astern of the
 Belvidera, shortened sail, and at midnight lay to, in
 company with the Congress, to await the coming up
 of her remaining friends.

Force of Belvidera and Congress.
 The force of the President has already been fully
 described. The Belvidera measured 946 tons, and
 was armed precisely according to the establishment
 of her class, with 42 guns, including 14 carronades,
 32-pounders, and two long nines. The Congress was a
 remarkably fine ship, about the size of the british
 frigate Cambrian, or from 1150 to 1170 tons; and
 carried the same armament as the Chesapeake when
 she was attacked by the Leopard,* with four 32-
 pounder carronades in addition, making 50 guns in
 all. Some accounts give the Congress 52 guns.
 Her complement was 440, with scarcely a boy among
 them.

Loss on each side.
 The principal damages of both ships have already
 been stated. The Belvidera's loss, besides that
 sustained at the commencement of the attack,
 amounted, out of 230 men and boys of her comple-
 ment, to 17 wounded; making her total loss two
 killed and 22 wounded, the greater part slightly.
 According to the american official account, the
 President lost, altogether, two midshipmen and one
 marine killed, the commodore, one lieutenant, one
 lieutenant of marines, three midshipmen, and 12
 seamen wounded, one mortally, and several severely;
 making her total loss in killed and wounded 22, of
 which number six had suffered by the Belvidera's
 fire. This was paying rather dear for the day's

* See vol. iv. p. 480.

amusement; but the 15 hours' dance, which the Belvidera had led the commodore, did him more injury than her guns or his own: it lost him the Jamaica fleet, by carrying his squadron too far to the northward. At daylight on the 23d, when the commodore began chasing the Belvidera, the american squadron was in latitude $39^{\circ} 26'$ north, longitude $71^{\circ} 10'$ west; and at noon on that day the Jamaica fleet was in latitude $39^{\circ} 35'$, longitude $61^{\circ} 38'$.

1812.
July.

Having repaired the most material of her damages, the Belvidera steered towards Halifax, and on the 27th anchored in the harbour, in company with two or three american merchant vessels, which, on receiving so unequivocal a proof that war had been declared by the United States, captain Byron had ventured to detain; but all of which rear-admiral Sawyer restored, considering that the affair, after all, might have originated in some mistake of the american commodore's. On the evening of the same day on which the Belvidera anchored in Halifax, the Mackerel schooner was despatched to England with the intelligence, and arrived at Portsmouth on the 25th of July.

Belvi-
dera
arrives
at Ha-
lifax.

It took the President a full day to repair her damages. That done, the american squadron proceeded in quest of the Jamaica fleet. On the 1st of July, a little to the eastward of the bank of Newfoundland, the squadron fell in with a fleet, not of ships, but of cocoa-nut-shells, orange-peels, &c.;* and the commodore and his officers promised themselves a West-India dessert to their next day's dinner. They longed in vain; and, after being thus tantalized from the 1st to the 13th, they steered for Madeira, and thence for the Azores. To increase the misfortunes of the cruise, the scurvy broke out among the men, and conferred additional value upon the limes, that were known to be in such profusion on board the Jamaica ships. The squadron captured six or seven small merchantmen, and recaptured

1812. one american vessel; but, although he chased
 Aug. the british 38-gun frigate Statira, captain Hassard Stackpoole, for several hours, commodore Rodgers returned to Boston without one national trophy to signalize his maiden cruise. He arrived there on the 29th of August; just six days after the Thalia, having brought home her charge in safety, had anchored in the Downs.

Im- One of the two great blows against England, the
 portant result of the pro-tracted chase of the Belvidera. subjugation of the Canadas and the capture of a West-India fleet of more than 100 sail, contemplated by Mr. Madison, was thus warded off; and to the judgment and promptitude of captain Byron on his first falling in with the american squadron, to the skill of the Belvidera's officers and crew in pointing their guns and working their ship, and to their bravery and perseverance in defending her during a long and arduous chase, while engaged with a force so greatly superior, is the nation indebted for the little mischief done to british commerce by a formidable american squadron, possessing the singular advantage of having its hostile intentions unknown.

Con- Had the President, when she fell in with the
 duct of Belvidera, been cruising alone, we can readily
 com- imagine, judging from what took place in the Little-
 mo- Belt's case, that commodore Rodgers would have
 dore magnified the british frigate into a line-of-battle ship,
 Rod- and have done his utmost to avoid her; but we are
 gers. quite at a loss, we confess, to account for the commodore's irresolution in not closing with the Belvidera, when he had a squadron of friends close at his heels. It was that irresolution which produced those many yawings and traverses in the President's course; and it was those yawings and traverses that, coupled with the masterly manner in which the Belvidera was handled, saved her from being captured. Meaning, some have thought, to compliment, others to *quizz*, his political opponent, the democratic commodore, captain Isaac Hull of the Constitution, a staunch federalist, says to the secretary of the

american navy; "I am confident, could the commodore have got alongside the *Belvidera*, she would have been his in less than *one hour*." 1812.

A contemporary informs us, that lieutenant Sykes "was promoted to the rank of commander, as a compliment, not only to his captain and himself, but to the officers and ship's crew, which certainly would not have been done, had there been any want of discipline observable in the ship."* With respect to the *Belvidera*'s first lieutenant, captain Brenton has been misinformed. Lieutenant Sykes was not made a commander until the 2d of November, 1814; and, as he had then been a lieutenant more than 19 years, he was entitled to the promotion upwards of two years before, even had he not distinguished himself in the *Belvidera*, and been recommended to the admiralty by her captain as "an excellent officer." Our contemporary's mysterious allusion about "want of discipline," we do not understand. Capt. Brenton's account.

It was intended that the frigate *Essex* lying at New-York should form part of the squadron of commodore Rodgers, but she could not be got ready in time. The *Essex* was the smallest frigate belonging to the United States, measuring only 867 tons. Her armament consisted almost wholly of 32-pounder carronades: she mounted 24, with two long 12-pounders, on the main deck, and 16, with four long 12-pounders, on the quarterdeck and forecastle; total 46 guns. The rate of the *Essex* in the american navy-list was of "32 guns;" and her complement, as subsequently acknowledged by captain David Porter, who so long commanded her, was 328 men. The usual addition of, "and boys," as applied to the crew of an american ship, would convey a very erroneous impression; therefore we do not use it. But, to those acquainted with the usual composition of the crews of british ships of war, it will appear the most extraordinary circum- Guns and men carried by the Essex.

* Brenton, vol. v. p. 47.

1812. stance, that, out of those 328 men, captain Porter himself should have declared, (and for which the american government must have been not a little displeased,) in his famous "Journal of a Cruise," there were but 11 landsmen. This is a most important fact, and deserves to be held in remembrance by all who desire to judge fairly in those encounters between british and american ships, of which we shall soon have to give some account.

Case of
John
Erving,
a
british
seaman
on
board
the
Essex.

Having the authority of a respectable eye-witness, for the accuracy of as much of the following account as relates to the proceedings on shore, we feel bound to give it insertion; if but to show the importance that was attached to the retention of british seamen on board the american ships of war, as well as the barbarous means to which an american officer could resort, to punish a native of England for refusing to become a traitor to his country. A New-York newspaper, of June 27, 1812, contains the following as the substance of the formal deposition of the victim of captain Porter's unmanly treatment. "The deposition states, that John Erving was born in Newcastle-upon-Tyne, England; that he has resided within the United States since 1800, and has never been naturalized; that, on the 14th of October, 1811, he entered on board the Essex, and joined her at Norfolk; that captain Porter, on the 25th of June, 1812, caused all hands to be piped on deck, to take the oath of allegiance to the United States, and gave them to understand, that any man who did not choose to do so should be discharged; that, when deponent heard his name called, he told the captain, that being a british subject he must refuse taking the oath; on which the captain spoke to the petty-officers, and told them they must pass sentence upon him; that they then put him into the petty launch, which lay alongside the frigate, and there poured a bucket of tar over him, and then laid on a quantity of feathers, having first stripped him naked from the waist; that they then rowed him ashore, stern foremost, and landed him. That he

wandered about, from street to street, in this condition, until Mr. Ford took him into his shop, to save him from the crowd then beginning to gather; that he staid there until the police magistrate took him away, and put him in the city prison for protection, where he was cleansed and clothed. None of the citizens molested or insulted him. He says he had a protection, which he bought of a man in Salem, of the same name and description with himself, for four shillings and sixpence, which he got renewed at the custom-house, Norfolk. He says he gave, as an additional reason to the captain, why he did not choose to fight against his country, that, if he should be taken prisoner, he would certainly be hung." 1812.

This, having been copied into other papers, met the eye of captain sir James Lucas Yeo, of the 12-pounder 32-gun frigate Southampton, then attached to the Jamaica station. Persons, acquainted with that officer, can judge of his feelings upon reading an account of the ill-treatment of a british sailor. Some expression, marking his abhorrence of the act and his contempt for the author, did very likely escape sir James; and that, in the hearing of one or more of the american prisoners then on board the Southampton. Through this channel, which was none of the purest, the words probably became what they appeared in a Philadelphia newspaper, the "Democratic Press," of the 18th of September, 1812, a sort of challenge, couched in vulgar terms, from the Southampton to the Essex. It has been thought that Mr. Binns himself was at the bottom of it, to give his friend (but not countryman) captain Porter an opportunity of blustering himself into more creditable notice, than the affair of John Erving was calculated to gain for him. At all events, a formal acceptance, by captain Porter, of the alleged challenge, went the round of the american newspapers. Indignation of sir James Yeo on reading the account. Alleged challenge from him to captain Porter.

Although, according to the best of our inquiries on the subject, no such message was sent by sir James Yeo, the Southampton cruised, for several weeks,

1812. along the southern coast of the United States, in the
 July. hope of falling in with the Essex, the nature of whose
 South- armament sir James fully knew. The Southampton
 ampton had 212 men and boys, and, in reference to the
 cruises quality of her crew, was well manned. All that her
 in search captain and his officers wanted was the weather-
 of gage, to enable the Southampton to choose her
 Essex. distance, and bring her long 12s into fair competition
 with her opponents short 32s; or else to afford the
 british seamen an opportunity of getting on board the
 american ship early in the action, and of deciding
 the contest by their favourite mode, a hand-to-hand
 struggle.

Essex It was on the 3d of July that the Essex sailed
 cap- from New-York. On the 11th, at 2 A.M., in latitude,
 tures a by her reckoning, 33°, longitude 66°, the Essex fell in
 trans- with a small convoy of seven british transports, going
 port from Barbadoes to Quebec, under the protection of
 from a the british 12-pounder 32-gun frigate Minerva, (same
 convoy force as Southampton,) captain Richard Hawkins,
 under and succeeded in cutting off the rearmost vessel, a
 the pro- brig, No. 299, having on board 197 soldiers. At
 tection of the 4 A.M., observing a strange ship very close to one
 Mi- of the brigs of her convoy, the Minerva wore to
 nerva reconnoitre the intruder. Finding, however, after a
 frigate. while, that, by continuing in chase of the american
 frigate and her newly-made prize, he would run
 the risk of losing the remaining six vessels of his
 convoy, captain Hawkins left the brig (captured, by
 the Minerva's reckoning, in latitude 34° 3' north, lon-
 gitude 66° 39' west) in the quiet possession of the
 Essex, and resumed his course towards Quebec.

Boast- Captain Porter was discreet, as well as shrewd,
 ing of enough to chuckle at this; and, disarming and parol-
 the ing the soldiers, and ransoming the vessel, he allowed
 captain Porter on the the latter to proceed with the intelligence of the
 subject outrage she had suffered. He of course obtained
 from his prize the name of the convoying frigate,
 whose protection was of so much use to her, and by
 the first opportunity wrote home an account of his
 exploit; concluding with the, as applied to a british

ship, most galling words: "We endeavoured to bring the frigate to action, but did not succeed." ^{1812.}
 This letter appeared in several english, as well as ^{Aug.}
 american newspapers; but we can find no explanation of the circumstance out of which it originated. Had captain Porter really "endeavoured" to bring the Minerva to action, we do not see what could have prevented the Essex, with her decided superiority of sailing, from getting alongside of her. But no such thought, we are sure, entered the head of captain Porter. This will be clear to all, as we proceed in our analysis of that gentleman's claim, or claims rather, for they are numerous, to wear the laurel.

On the 13th of August, but in what spot off the american coast nowhere appears, the Essex fell in with the british 16-gun ship-sloop Alert, captain Thomas Lamb Poulden Laugharne. The ship, thus ^{Essex falls in with Alert sloop of war.}
 raised to the dignity of a sloop of war, had, eight years before, carried coals from Newcastle to London. In the year 1804 twelve of these craft were purchased for men of war; and the Oxford collier became the Alert sloop, fitted with 18-pounder carronades, the highest caliber she would bear. Had she been a little smaller, and rigged with two masts instead of three, the Alert would have been a gun-brig; but her unfortunate mizenmast exalted her above scores of vessels, any one of whom, among the two classes next below her in our abstracts, except perhaps the Alacrity, would have gloried in having such a ship to contend with: nay, some of the Alacrity's fine class would not have declined a combat with two such opponents. By the end of the year 1811, ten of these choice men of war had either been broken up, or converted to peaceable harbour-ships. But there were two that yet remained; and, as if it was supposed that they in reality possessed the qualities of which their names were significant, the Avenger and Alert sailed for the station of North America,

1812. the very month before the United States declared
 Aug. war against Great Britain.

Engages
and
captures
her.

When the american frigate *Essex*, as we have stated, fell in with the *Alert*, the latter was in search of the *Hornet*; such another sloop of war as the *Little-Belt* or *Bonne-Citoyenne*, and who of course would, or at least ought to, have captured both the *Alert* and *Avenger*, had she encountered them together. Either mistaking the *Essex* for what she was not, or aiming at a still higher flight than the *Hornet*, the *Alert* bore down upon the former's weather quarter, and opened her puny fire. In a quarter of an hour, the *ci-devant* collier had seven feet water in her hold, three of her men wounded, and her colours down, and had neither hurt a man, nor done any other injury, on board the *Essex*.

Gal-
lantry
of capt.
Laugh-
arne
not
proper-
ly se-
conded

The conspicuous gallantry of captain Laugharne entitled him to a better ship than the *Alert*, a better first lieutenant than Andrew Duncan, who gave him no support, and a better crew than his officers and men, who, except Johanson Clering the master, and William Haggarty the purser, went ast to request their captain to strike the colours. Captain Porter disarmed his fine prize, and sent her with the prisoners, 86 in number, as a cartel, to St.-John's, Newfoundland; where, on the 8th of October, captain Laugharne and his officers and men were tried for the loss of their ship. The captain, master, and purser were most honourably acquitted; the first lieutenant was dismissed the service; and the remaining officers and crew obtained, along with their acquittal, the marked disapprobation of the court.

martial
on the
officers
&c.

Alert
made a
block-
ship.

On her return to a port in the United States, being found unfit for a cruiser, the *Alert*, after the lapse of some months, was fitted as a store-ship. The moment, however, that her sails were unfurled, her creeping, collier-like pace betrayed her origin, and sent back the *Alert* to New-York, to grace the harbour as a block-ship, and to be pointed out

to the citizens as one of the national trophies of 1812.
the war.

Aug.

As captain Porter was a great favourite at the city of Washington, Mr. Clark, who was patronised by all the great men there, could do no less than insert in his book any little tale which the former might wish to see recorded in the naval history of his country.

"On the 30th of August," says one of those tales, "the Essex being in latitude 36° north, longitude 62° west, a british frigate was discovered standing towards her, under a press of sail. Porter stood for her under easy sail, with his ship prepared for action; and, apprehensive that she might not find the Essex during the night, he hoisted a light. At 9, the british vessel made a signal: it consisted of two flashes and a blue light. She was then, apparently, about four miles distant. Porter stood for the point where she was seen until midnight, when, perceiving nothing of her, he concluded it would be best to heave to for her until morning, concluding she had done the same; but, to his great surprise, and the mortification of his officers and crew, she was no longer in sight. Captain Porter thought it to be not unlikely, that this vessel was the *Acasta*, of 50 guns, sent out, accompanied by the *Ringdove*, of 22, to cruise for the Essex."*

Essex falls in with a british ship of war, that avoids her.

It did not perhaps occur to Mr. Clark, that ships usually carry log-books, in which are entered every day's proceedings, with the latitude, longitude, &c.; and that these can be referred to, in case the false assertions of any historian, or paragraph-writer, or american captain, may be worth the trouble of disproving. Considering what a formidable man captain Porter was, nothing less than the *Acasta*, "of 50 guns," and *Ringdove*, "of 22," could be sent out to cruise for the Essex. Unfortunately for the fame of the captain of the Essex, on the 30th of August, 1812, the day mentioned, the *Acasta* was cruising in the

Capt. Porter's modest mistake on the subject

* Clark's Naval History of the United States, vol. i. p. 180.

1812. latitude of 43° north, longitude $65^{\circ} 16'$ west; and the
 Sept. Ringdove, whose force, by the by, was only 18
 guns, was lying at an anchor in a harbour of the
 island of St.-Thomas. It was certainly very modest
 of captain Porter, to "think it not unlikely," that
 one of the finest 18-pounder frigates in the british
 navy, accompanied too by a sloop of war, would be
 sent out to "cruise for the Essex." The fact is, the
 ship, which captain Porter fell in with, was the 18-
 gun sloop Rattler, captain Alexander Gordon; and
 who, we believe, not considering himself a match
 for the american frigate, rather avoided than sought
 an engagement with her.

Essex
 falls in
 with
 the
 Shan-
 non.

On the 4th of September, at noon, in latitude
 $39^{\circ} 11'$ north, longitude $70^{\circ} 22'$, the Essex, then
 having under her convoy the american merchant ship
 Minerva, fell in with "two ships of war" to the south-
 ward and westward. These two "ships of war,"
 as captain Porter declared them to be,* were the
 british 38-gun frigate Shannon, captain Philip Bowes
 Vere Broke, and the merchant ship Planter, which
 she had just recaptured from the Americans. The
 Shannon, as may be supposed, was soon under all
 sail in chase; but in a little time the wind, which
 had been blowing right aft, headed the ship flat
 aback. With the wind thus suddenly changed in
 her favour, the Essex, keeping the Minerva close
 astern of her, bore down, as if to bring the Shannon
 to action; but at 4 h. 30 m. P. M., just as she had
 got within about 10 miles of the british frigate, the
 Essex suddenly hauled up, and, after making some
 private signals, crowded sail to get away; leaving
 the poor merchant ship, whom she had thus led into
 danger, to shift for herself.

 capes.

The Shannon continued chasing to-windward,
 under a press of canvass, until dark; when, losing
 sight of the Essex, the former tacked and seized the
 merchant ship. Captain Broke intended to burn

* Clark's Naval History of the United States, vol. i. p. 180.

the vessel directly, that the Essex might see the flames, and perhaps bear down to revenge the indignity offered to the american flag; but the night becoming dark and squally, captain Broke would not risk his boats in removing the crew. Consequently the Minerva, in ballast only, was not burnt until the following morning; and by that time the Essex had made so good a use of her sails, that she was no longer to be seen by the Shannon. This was the last exploit captain Porter performed in this his first cruise; and three days afterwards, namely, on the 7th of September, the Essex, "covered with glory," anchored in Delaware bay.

1812
July.

On the 28th of June, which was the day after the Belvidera had arrived at Halifax with the account of the unexpected attack made upon her by an american squadron, vice-admiral Sawyer despatched the 18-gun brig-sloop Colibri, captain John Thompson, as a flag of truce to New-York, to obtain an explanation of the matter. On the 9th of July the Colibri anchored off Sandy-Hook, and on the 12th weighed and sailed on her return; having on board, besides a copy of the declaration of war, the british ambassador, Mr. Foster, and consul, colonel Barclay. On the day previous to the arrival of the Colibri at Sandy-Hook, the british 4-gun schooner Whiting, lieutenant Lewis Maxey, from Plymouth, with despatches for the american government, arrived in Hampton roads, ignorant of the war. As lieutenant Maxey was proceeding on shore in his boat, the american privateer-schooner Dash, captain Garroway, bound on a cruise, got possession of him, and then ran alongside the Whiting; and, having upwards of 80 men in crew, captured her, without opposition. The despatches had previously been sunk. The Whiting was only 75 tons, and mounted four carronades, 12-pounders, with a complement of 18 men and boys. Of these, a third were absent in the boat; and those in the schooner had not the least suspicion of being in an enemy's waters. The Dash mounted one heavy

roads.

1812. long gun upon a pivot-carriage. This, and a suppression of the principal circumstances, enabled the american writers to state, with some degree of exultation, "The british schooner mounts four guns, the Dash only one." The Whiting was afterwards restored, but was captured on her way to England by the french privateer brig Diligent.

Squadron sails from Halifax for the american coast.

On the 17th the Colibri returned to Halifax; but, having in the mean time received positive intelligence that the United States had declared war, rear-admiral Sawyer had, since the 5th, despatched to cruise off the american coast, under the orders of captain Broke, all the effective ships which were then in the harbour, consisting of the Shannon and Belvidera, the 64-gun ship Africa, captain John Bastard, and the 18-pounder 32-gun frigate *Æolus*, captain lord James Townsend. On the 9th, in latitude 41°, longitude 66°, or nearly abreast of Nantucket island, the squadron was joined by the 38-gun frigate *Guerrière*, captain James Richard Dacres, then on her way to Halifax to refit.

Guerrière joins in an ineffective state.

When it is known, that the *Guerrière* had nearly expended, not only her water and provisions, but her boatswain's and carpenter's stores; that her gunner's stores were also deficient; that what remained of her powder, from damp and long keeping, was greatly reduced in strength; that her bowsprit was badly sprung, her mainmast, from having been struck by lightning, in a tottering state, and her hull, from age and length of service, scarcely seaworthy, no one will deny that this rencontre with a squadron, the commodore of which had orders to supply her with three months' provisions and take her under his command, was rather unfortunate: in fact, such was the state of general decay in which the *Guerrière* at this time was, that, had the frigate gone into Portsmouth or Plymouth, she would, in all probability, have been disarmed and broken up.

On the 14th, when arrived off Sandy-Hook, captain Broke received the first intelligence of the

squadron of commodore Rodgers having put to sea; and, as may be supposed, a sharp look-out began immediately to be kept by each of the british ships. On the 16th, at 3 P. M., when the british squadron was abreast of Barnegat, about four leagues off shore, a strange sail was seen, and immediately chased, in the south by east or windward quarter, standing to the north-east. This sail was the United States' 44-gun frigate Constitution, captain Isaac Hull, from Chesapeake bay since the 12th, bound to New-York. The chase continued throughout the afternoon and evening, in light winds; and at 10 P. M. the Guerrière, who since dusk had lost sight of her consorts to-leeward, found the Constitution standing towards her, making signals. These two frigates continued to near each other, and at 3 h. 30 m. A. M. on the 17th were only half a mile apart; when, observing on his lee beam two other frigates, the Belvidera and Æolus, and astern of them three more vessels, the Shannon, Africa, and a schooner, none of whom answered or appeared to understand his signals, captain Dacres concluded that they were the squadron of commodore Rodgers, and tacked. The consequence of this mistake was, that at daylight the Guerrière and Constitution were nearly two miles, instead of only half a mile, from each other.

At daylight it was quite calm. The Constitution, while she steered, kept her head to the southward. At this time the Belvidera was about four miles on her lee quarter, or bearing about north-east by north; the Guerrière at some distance astern of the Belvidera; the Shannon upon the latter's weather quarter, or about west-north-west, distant two miles; and the Æolus at no great distance from the Shannon. The Africa was considerably astern of these two ships, and gradually losing ground in the chase. At 5 h. 30 m. A. M., the Constitution no longer steering, the boats were sent ahead to tow the ship's head to the southward. At the same time a 24-pounder was hoisted up from the main deck; and

 July. to be used, along with the quarterdeck 24-pounder,
 as stern-chasers. The taffrail was then cut away,
 to give the three guns room, and two more 24-
 pounders were pointed through the stern ports on
 the main deck. At about 5 h. 45 m. the Belvidera
 and other british ships began towing with their
 boats. At 6 A. M. the Constitution got her head
 to the southward, and set topgallant studding-sails
 and staysails. At 7 A. M., having a few minutes
 before sounded in 26 fathoms, captain Hull, at the
 suggestion of lieutenant Charles Morris, first of the
 ship, got out a kedge, and began warping ahead.
 At 7 h. 30 m. the Constitution hoisted her colours,
 and fired one shot at the Belvidera.

Em-
 ploys
 the
 novel
 mode
 of
 kedg-
 ing.

British At 9 A. M. a light air sprang up from the south-
 ships south-east, and the ships all trimmed sails on the
 adopt larboard tack. The Belvidera gaining, the Constitu-
 the me- tion started a portion of her water, and threw over-
 thod, board some of her booms. At 10 h. 30 m. the breeze
 freshened; but, in a few minutes, again subsided to
 nearly a calm. Observing the benefit that the Con-
 stitution had derived from warping, captain Byron
 did the same; "bending all his hawsers to one
 another, and working two kedge anchors at the same
 time, by paying the warp through one hawse-hole as
 it was run in through another opposite."* The
 effect of this was such, that the Belvidera, by 2 P. M.,
 got near enough to exchange bow and stern chasers
 with the Constitution, but without effect on either
 side. At 3 P. M., a light breeze having sprung up,
 the Constitution rather gained, and the firing ceased.
 During the afternoon and night the chase continued,
 to the gradual advantage of the american frigate.

and at 4 h. 20 m. the Constitution did the same. At 1812.
9 A. M. an american merchant ship was seen bearing July.
down towards the squadron: upon which the Bel-
videra, by way of a decoy, hoisted american colours.
To counteract the effect of this ruse, the Constitution
hoisted english colours, and the merchant vessel
hauled off and escaped capture. At 4 P. M., owing
to the permanency of the breeze, the Constitution
was seven miles ahead, and at daylight on the 19th
had attained double that distance. The british
squadron persevered until about 8 h. 30 m. A. M.;
then gave up the chase, and stood to the northward
and eastward; latitude at noon the same day 38°
north, and longitude 71° 20' west.

Consti-
tution
escapes

On the 29th of July, in latitude 40° 44', longitude
62° 41', captain Broke fell in with the expected
homeward-bound Jamaica fleet, consisting of about
60 sail, under convoy of the 38-gun frigate Thetis,
captain William Henry Byam; and on the 6th of
August, having escorted it over the banks of New-
foundland, to about latitude 43° 20', longitude 50°,
he stood back towards the american coast. On this or
the following day the Guerrière parted company for
Halifax, to obtain that refit which could now no
longer be postponed. Indeed, the ship was in a
far less effective state than when she had joined the
squadron, having sent away in prizes her third lieu-
tenant, (John Pullman,) second lieutenant of marines,
three midshipmen, and 24 of her best seamen; thus
leaving herself with only 250 men and 19 boys.

Capt.

vious
cruise
of the
Consti-
tution.

again set sail, and stood to the eastward, in the hope of falling in with the british 38-gun frigate *Spartan*, captain Edward Pelham Brenton, reported to be cruising in that direction. Having run along the coast as far as the bay of Fundy without discovering the object of her pursuit, the *Constitution* proceeded off Halifax and Cape Sable, and then steered to the eastward in the direction of Newfoundland. Passing close to the isle of Sable, the american frigate took a station off the gulf of St.-Lawrence, near Cape Race, for the purpose of intercepting vessels bound to or from Quebec and New-Brunswick. On the 15th captain Hull captured, and on account of their small value burnt, two merchant brigs and a bark; and on the 17th recaptured from the british ship-sloop *Avenger*, the american brig *Adeline*, on board of which he placed a prize-master and six or seven men, to take her to Boston. Having received intelligence, that the squadron which, by a display of so much skill and perseverance, the *Constitution* had already once evaded, was off the Grand Bank, captain Hull changed his cruising ground, and stood to the southward. On the 18th, at midnight, an american privateer gave information, that she had the day before seen a british ship of war to the southward. The *Constitution* immediately made sail in that direction; and, in the course of a few hours, captain Hull found he had not been misinformed.

Force
of the
*Guer-
rière*.

The *Guerrière*, when she arrived on the North-American station, was armed the same as the other frigates of her class, with 46 guns, including 16 carronades, 32-pounders, and two long nines on her quarterdeck and forecastle. Like most french ships, the *Guerrière* sailed very much by the head; and, to assist in giving her that trim, as well as to obviate the inconvenience of a round-house which intervened between the foremost and bridle ports on each side, and prevented the gun stationed at the former port from being shifted to the latter when required to be used in chase, two additional 18-pounders, as standing

bow-chase guns, were taken on board at Halifax; thus giving the Guerrière 48 guns, including 30 long 18-pounders on the main deck. The mere fact, that, for any use they could be in either broadside, these bow guns might as well have been in the hold, is not the principal point cleared up by the explanation. Those who are aware, that no frigate in the british navy, except the Acasta and Lavinia, and none at all belonging to the french navy, mounts as her establishment 30 long 18-pounders on the main deck, would have a right to consider the Guerrière as a frigate of a superior class and description; and so, for that very reason, is she still generally considered, as well on this as on the opposite side of the Atlantic. We are surprised that neither of our contemporaries, both of whom have given proofs that the first edition of this work has been occasionally consulted by them, has thought it worth his while to point out so important a peculiarity in the Guerrière's armament.*

We have already, at some length, shown how particular the Americans were in manning their ships; and how easy, having so few ships to man, it was to supply them with picked crews. For many years previous to the war, America had been decoying the men from british ships, by every artful stratagem. No ship, that anchored in her waters, could send a boat on shore, without having the crew assailed by a recruiting party from some american frigate fitting in the vicinity. Many british seamen had also entered on board american merchant vessels; and the numerous non-intercourse and embargo bills, in existence at different periods during the four years preceding the war, threw many merchant sailors out of employment. So that the captains of the american frigates, when preparing for active warfare, had to pick their complements from a numerous body of seamen. Highly to the credit of the naval administration of the United States, the crews of their ships were taught the practical rules

1819.
Aug.

Facility with which the Americans could man their ships.

* Brenton, vol. v. p. 52. Marshall, vol. ii. p. 974, note.

1812. of gunnery; and 10 shot, with the necessary powder,
 Aug. were allowed to be expended in play, to make one
 hit in earnest.

Ame-
 rican
 ma-
 rines,

Very distinct from the american seamen, so called, were the american marines. They were chiefly made up of natives of the country; and a deserter from the British would here have been no acquisition. In the United States, every man may hunt or shoot among the wild animals of the forest. The young peasant, or back-woodman, carries a rifled-barrel gun, the moment he can lift one to his shoulder; and woe to the duck or deer that attempts to pass him, within fair range of his piece. To collect these expert marksmen, when of a proper age, officers were sent into the western parts of the Union; and, to embody and finish drilling them, a marine-barrack was established near Washington: from which dépôt the american ships were regularly supplied.

Re-
 marks
 on the
 crews
 of
 british
 ships.

With respect to a british ship of war, her case was widely different. Although the captain was eased of much of his trouble, by having, in proportion to the size and mounted force of his ship, a considerably smaller crew to collect, by having about one-twentieth part of that crew to form of boys and widows' men, or men of straw, and by being permitted to enter a large proportion of landsmen, a rating unknown on board an american ship of war; still was the small remainder most difficult to be procured, even with all the latitude allowed in respect to age, size, and nautical experience. Sometimes, when a captain, by dint of extraordinary exertions, had provided himself with a crew, such as a man of war's crew ought to be, the admiral on the station to which he belonged would pronounce the ship "too-well manned," and order a proportion of her best men to be draughted on board the flag-ship at her moorings, to learn to be idle and worthless; sending, in lieu of them, a parcel of jail-birds and raw hands, to make those among whom they were going nearly as bad as themselves.

There was another point in which the generality ^{1812.} of british crews, as compared with any one american crew, were miserably deficient; skill in the art of ^{Aug.} gunnery. While the american seamen were constantly ^{Inat-} firing at marks, the british seamen, except in par- ^{tention} ticular cases, scarcely did so once in a year; and ^{paid to} some ships could be named, on board of which not ^{gun-} a shot had been fired in this way for upwards of ^{nery} three years. Nor was the fault wholly the captain's: ^{in the} the instructions, under which he was bound to act, ^{british} forbade him to use, during the first six months after ^{service.} the ship had received her armament, more shots per month than amounted to a third in number of her upperdeck guns; and, after those six months had expired, he was to use only half the quantity. Considering by this, either that the lords of the admiralty discouraged firing at marks as a lavish expenditure of powder and shot, or that the limits they had thus set to the exercise of that branch of naval discipline destroyed its practical utility, many captains never put a shot in the guns until an enemy appeared: they employed the leisure time of the men in handling the sails, and in decorating the ship. Others, again, caring little about an order that placed their professional characters in jeopardy, exercised the crew repeatedly in firing at marks; leaving the gunner to account, in the best manner he could, for the deficiency in his stores. As the generality of french crews were equally inexperienced with their british opponents, the unskilfulness of the latter in gunnery was not felt or remarked: we shall now have to adduce some instances, in quick succession, that will clearly show, how much the british navy at length suffered, by having relaxed in its attention to that most essential point in the business of war, the proper use of the weapons by which it was to be waged.

That our opinion on this subject is in perfect accordance with what was the opinion of a british officer of the first rank and distinction, will appear by the

1812. following quotation from the work of a contemporary:
 Aug. "The earl of St.-Vincent," says captain Brenton,
 Opi- "in a letter to the author in 1813, thus expresses
 nion of himself, 'I hear the exercise of the great gun is laid
 earl St. aside, and is succeeded by a foolish frippery and use-
 Vin- less ornament.' How far this may have been the
 cent case," proceeds captain B., "in the Mediterranean,
 on the or East or West Indies, with ships of the line, we
 subject shall not say; but certainly on the coast of North
 America it was not so, the ships on that station being
 kept constantly in exercise under the daily expecta-
 tion of a war."* Notwithstanding this to us wholly
 unexpected dissent on the part of captain Brenton
 from an opinion given by earl St.-Vincent, we shall
 consider the latter to be the highest authority on
 the subject; especially as the former, in including
 the Mediterranean among the stations on which ships
 of the line were neglected to be exercised, has over-
 looked the very strict and commendable attention
 paid to that important branch of discipline by vice-
 admiral sir Edward Pellew.

Re-
 duction
 in the
 Consti-
 tution's
 arma-
 ment
 and
 crew.

We have already given the best account, which
 the imperfect state of the american records has
 enabled us to give, of the construction, size, and
 established armament of the three american 44-gun
 frigates. We have now to notice a slight alteration,
 that was afterwards made in the armament of the
 Constitution. In the summer of 1811, when that
 frigate was fitting for sea at Norfolk, Virginia,
 captain Hull considered that her upperworks would
 not strain so much as they had been found to do,
 if her 42-pounder carronades were exchanged for
 32s. This he got effected; and on or about the
 31st of July the Constitution sailed for Cherbourg,
 with those guns and a reduced crew of 380 men
 on board. On the 6th or 7th of September the
 Constitution reached her destination, and in a month
 or two afterwards returned to her anchorage at
 Norfolk.

* Brenton, vol. v. p. 44.

Having discovered that 380 men, even in peace-1812.
 able times, were not enough for so large and heavily ^{Aug.}
 rigged a ship as the Constitution, captain Hull, during ^{Her}
 his stay in the Chesapeake, enlisted as many more as ^{crew}
 restored his complement to 476. But, finding probably ^{again}
 that the removal of six tons from the Constitution's ⁱⁿ⁻
 upper battery afforded the ship great relief in a ^{crossed}
 heavy sea, captain Hull did not take back his 42-
 pounders. He contrived, however, to reduce the
 inequality of force, by opening a port in the centre of
 the gangway for one of the two 24-pounders on the
 upper deck; or rather, as to be precise we should
 designate them, the two english long 18-pounders,
 (battery-guns, we believe,) bored to carry a 24-
 pound shot. We formerly noticed the extraordinary
 size and weight of the Constitution's maindeck
 24-pounders. It appears that the guns were mounted
 on very high carriages, which the height of the deck,
 represented to be nearly eight feet, rendered no
 inconvenience. The height of the President's mid-
 ship maindeck port-sill from the water's edge was
 eight feet eight inches, and she is described as the
 lowest ship of the three. This goes far to reconcile
 the statement we have often heard made, that the
 Constitution's maindeck battery was upwards of 10
 feet from the water; a height which, at a long distance,
 gave her a decided advantage in the range.

It is a remarkable fact, that no one act of the little ^{Differ-}
 navy of the United States had been at all calculated ^{ent}
 to gain the respect of the British. First, was seen ^{sentiments}
 the Chesapeake allowing herself to be beaten, with ^{pre-}
 impunity, by a british ship only nominally superior ^{vailing}
 to her. Then the huge frigate President attacks, ^{in the}
 and fights for upwards of half an hour, the british ^{two}
 sloop Little-Belt. And, even since the war, the ^{navies}
 same President, at the head of a squadron, makes a ^{when}
 bungling business of chasing the Belvidera. While, ^{war}
 therefore, a feeling towards America, bordering on ^{began.}
 contempt, had unhappily possessed the mind of the
 british naval officer, rendering him more than usually

1812. careless and opiniative, the american naval officer, having been taught to regard his new foe with a portion of dread, sailed forth to meet him, with the whole of his energies roused. A moment's reflection taught him, that the honour of his country was now in his hands; and what, in the breast of man, could be a stronger incitement to extraordinary exertions? Thus situated were the navies of the two countries, when, with damaged masts, a reduced complement, and in absolute need of that thorough refit, for which she was then, after a very long cruise, speeding to Halifax, the *Guerrière* encountered the *Constitution*, 17 days only from port, manned with a full complement, and in all respects fitted for war.

Guerrière
opens
her fire
at the
Constitution.

It was, as we have already stated, about 2 p. m. that the *Guerrière*, standing by the wind on the starboard tack, under topsails, foresail, jib, and spanker, with the wind blowing fresh from the northwest, discovered the *Constitution* bearing down towards her. At 3 p. m. each ship made out the other to be an enemy's man of war; and at 3 h. 30 m. each discovered, with tolerable precision, the force that was about to be opposed to her. At 4 h. 30 m. p. m. the *Guerrière* laid her main topsail to the mast, to enable the *Constitution* the more quickly to close. The latter, then about three miles distant, shortened sail to double-reefed topsails, and went to quarters. At 4 h. 45 m. p. m. the *Guerrière* hoisted one english ensign at the peak, another at the mizen topgallantmast-head, and a union jack at the fore; and, at 4 h. 50 m. p. m.,* opened her starboard broadside at the *Constitution*. The *Guerrière* then filled, wore, and, on coming round on the larboard tack, fired her larboard guns, "her shot," says captain Hull, "falling short;" a proof, either that the *Guerrière's* people knew not the range of their guns, or that the powder they were using was of an inferior

* In noticing the time, we shall generally, as on former occasions, take the mean of the two statements.

quality: both causes, indeed, might have cooperated in producing the discreditable result.

1812.

Aug.

At 5 h. 5 m. p. m., having run up one american ensign at the peak, lashed another to the larboard mizen rigging, and hoisted a third flag at the fore topgallant-mast-head, the Constitution opened her fire; and, it is believed, none of her shot fell short. To avoid being raked, the Guerrière wore three or four times; and continued discharging her alternate broadsides, with about as little effect, owing to her constant change of position and the necessary alteration in the level of her guns, as when her shot fell short. After the Constitution had amused herself in this way for half an hour, she set her main topgallantsail, and in five minutes, or at about 5 h. 45 m. p. m.,* brought the Guerrière to close action on the larboard† beam; both ships steering with the wind on the larboard quarter. At 6 h. 5 m. p. m. a 24-pound shot struck the Guerrière's mizenmast and carried it away by the board. It fell over the starboard quarter, knocked a large hole in the counter, and, by dragging in the water, brought the ship up in the wind, although her helm was kept hard a-port. By this accident to her opponent, who had then sustained only a very slight loss, the Constitution would have ranged ahead; but, bearing up, she quickly placed herself in an admirable position on the Guerrière's larboard bow. Now the american riflemen in the Constitution's tops had an opportunity of co-operating with their friends on deck; and a sweeping and most destructive fire of great guns and small-arms was opened upon the british frigate, whose bow guns were all she could bring to bear in return.

Constitution opens her fire.

Cuts away Guerrière's mizenmast.

At 6 h. 15 m. p. m. the two ships fell on board each other, the Guerrière's bowsprit getting foul of the Constitution's starboard mizen rigging. The crew of the latter now prepared to board the Guerrière; but, in addition to the impracticability of the

Constitution attempts to board, but is prevented.

* See diagram at p. 145.

† "Starboard," by mistake, in the gazette account.

1812. attempt owing to the motion of the ships, a slight
 Aug. pause was created by the fall of some of the american
 leaders: a shot from a british marine brought down
 the first lieutenant of marines while leading forward
 his party; another well-directed musket-shot passed
 through the body of the first lieutenant of the ship
 while at the head of the boarding seamen; and a third
 shot entered the shoulder of the master, as he was
 standing near lieutenant Morris. The riflemen in
 the Constitution's tops, in the mean time, continued
 their unerring fire. Among those who suffered on
 the occasion was captain Dacres himself, by a
 Capt. Dacres wound- ed. ball fired from the enemy's mizen top, which inflicted
 a severe wound in his back, while he was standing on
 the starboard fore-castle hammocks animating his crew.
 Although suffering greatly, he would not quit the
 deck. At about the same moment the master was
 shot through the knee, and a master's mate, Samuel
 Grant, was wounded very severely. In a few
 minutes the two ships got clear. Disentangling
 her bowsprit from her opponent's mizen rigging, the
 Guerrière now came to a little, and was enabled to
 bring a few of her foremost guns on the starboard
 side to bear. Some of the wads from these set fire
 to the Constitution's cabin, but the flames were soon
 extinguished. The Guerrière's " bowsprit, at that
 Guerrière loses her fore and main masts. moment striking the taffrail of the Constitution,
 slacked the fore stay of the Guerrière, and, the
 fore shrouds on the larboard or weather side being
 mostly shot away, the mast fell over on the starboard
 side, crossing the main stay: the sudden jerk carried
 the mainmast along with it, leaving the Guerrière a
 defenceless wreck, rolling her main-deck guns in the
 water."*

At about 6 h. 23 m.† the Constitution ranged ahead;
 and the Guerrière soon began clearing away the
 wreck of her masts, to be ready to renew the action.
 Just, however, as she had succeeded in doing so, her

* Brenton, vol. v. p. 51.

† See diagram.

spritsail yard, upon which she had set a sail to endeavour to get before the wind, was carried away. ^{1812.}
 The Guerrière now lay an unmanageable hulk in the trough of the sea, rolling her maindeck guns under water: to secure which required increased efforts, the rotten state of the breechings, as well as of the timber-heads through which the long-bolts passed, having caused many of them to break loose. While the british frigate was in this state, the Constitution, at 6 h. 45 m. P. M., having rove new braces, wore round and took a position, within pistol-shot on her starboard quarter. It being utterly in vain to contend any longer, the Guerrière fired a lee gun, and hauled down the union jack from the stump of her mizenmast. The following diagram will show the progress of this action, from the time the two ships closed to the moment of the Guerrière's surrender. ^{Aug.} ^{Surrender.}

Much to his credit, the moment the Constitution hoisted her colours, captain Dacres ordered seven Americans, that belonged to his reduced crew, to go below: one accidentally remained at his gun, the remainder went where they had been ordered. This left just 244 men and 19 boys. Out of this number, the Guerrière had her second lieutenant, (Henry Ready,) 11 seamen, and three marines killed, her captain, (severely,) first lieutenant, (Bartholomew Kent, slightly,) master, (Robert Scott,) two master's mates, (Samuel Grant and William John Snow,) one midshipman, (James Enslic,) 43 seamen, 13 marines, and one boy wounded; total, 15 killed and 63 wounded, six of the latter mortally, 39 severely,

Loss on board Guerrière.

1812. and 18 slightly. Out of her 468 men and boys,
 Aug. the Constitution, according to captain Hull's state-
 Loss on ment, had one lieutenant of marines (William S.
 board Bush) and six seamen killed, her first lieutenant,
 Consti- (Charles Morris, dangerously,) master, (John C.
 tution. Alwyn, slightly,) four seamen, (three of them danger-
 ously,) and one marine wounded; total, seven killed
 and seven wounded. But several of the Guerrière's
 officers counted 13 wounded; of whom three died
 after amputation. An equal number of killed and
 wounded, as stated in the american return, scarcely
 ever occurs, except in cases of explosion. In
 the british service, every wounded man, although
 merely scratched, reports himself to the surgeon,
 that he may get his smart-money, a pecuniary al-
 lowance so named. No such regulation exists in
 the american service; consequently, the return of
 loss sustained in action by an american ship, as far
 as respects the wounded at least, is made subservient
 to the views of the commander and his government.

Broad- Although captain Hull does not give his prize
 side any guns at all, no other american account gives
 guns of the two the Guerrière less than 49 guns. It is true that,
 ships, besides the 48 guns already specified, the ship had
 an 18-pounder launch carronade, mounted upon the
 usual elevating carriage for firing at the tops; but
 the priming iron, when put into the touch-hole just
 before the action commenced, broke short off and
 spiked the gun. In this state it was found by the
 captors. Consequently, as the two bow 18-pounders
 were equally useless, the Guerrière, out of her 49
 guns, could employ in broadside only 23. We have
 already shown that the american 44-gun frigate,
 without making any use of her concealed gangway
 ports, could present 28 carriage-guns in broadside;
 but the Constitution could, and did, as we now verily
 believe, present one gun more.* Of the fact of one
 of her two upperdeck 24-pounders being stationed on

* See p. 141.

the forecastle and the other on the quarterdeck, we ¹⁸¹² have not a doubt, from the following entry in the ^{Aug.} log of the Constitution when she was pursued by the British off New-York, and was about to open a fire from her stern-chasers. "Got the forecastle gun aft." But the disparity in her action with the Guerrière is sufficiently great without adding this gun to the Constitution's broadside: we shall therefore, as in common cases, take no more than half the mounted number.

As it would be not only unjust, but absurd, to compare together the totals of two crews of men and boys, in a case where each opponent uses the latter in so very different a proportion as the British and the Americans, we shall, making an ample allowance for those in the american crew, exclude the boys altogether from the estimate. ^{Boys in each crew.}

This action affords a strong practical proof of the advantages possessed by a large and lofty ship. While the main deck of the Guerrière was all afloat with the roughness of the sea, the Constitution's main deck was perfectly dry. If that was the case before the fall of the Guerrière's masts had destroyed her stability, what must it have been afterwards? It is this consideration that renders the tonnage so important an item in any statement of comparative force. The relative scantling is another essential point, for which the one-third disparity in size between these frigates will partly allow. By an unfortunate typographical (as we take it) error, captain Brenton represents the Constitution as "an american frigate of the same force as the President, though inferior (superior) as to scantling."* Now, the extraordinary thickness and solidity of the Constitution's sides had long obtained her, among the people who best knew her, the name of "Old Ironsides." We have already shown that the President, an acknowledged lighter ship, possessed stouter sides than a ^{Advantage of a superiority in size and scantling.}

* Brenton, vol. v. p. 49.

112. british 74: we may therefore consider, that the top-
 sides of the Constitution were at least equal in thick-
 ness to the topsides of a british 80.

With respect to the advantages of stout scantling,
 we are willing to take the opinion of the Americans
 themselves. A letter from Mr. Paul Hamilton, the
 secretary of the american navy, written a few months
 after the *Guerrière's* capture, and addressed to the
 "Chairman of the naval committee of the house of
 representatives," contains the following paragraph:
 "A 76 is built of heavier timber, is intrinsically much
 stronger than a frigate in all her works, and can sus-
 tain battering much longer, and with less injury. A
 shot, which would sink a frigate, might be received
 by a 76 with but little injury: it might pass between
 wind and water through a frigate, when it would
 stick in the frame of a 76." Nor is this merely the
 opinion of Mr. Secretary Hamilton: it is the result
 of "a very valuable communication received from
 Charles Stewart, esquire, a captain in the navy of
 the United States, an officer of great observation,
 distinguished talents, and very extensive professional
 experience; in whose opinion," adds Mr. H., "I be-
 lieve all the most enlightened officers in our service
 concur." By a singular coincidence too, subjoined
 to this highly complimented officer's communica-
 tion to Mr. Hamilton, are the signatures of captain
 Hull and his first lieutenant to a brief but com-
 prehensive sentence of approval: "We agree
 with captain Stewart in the above statement, in all
 its parts."*

We have before remarked upon the great care
 and expense bestowed by the Americans in equipping
 their few ships of war. As one important instance
 may be adduced, the substitution of fine sheet-lead for
 cartridges, instead of flannel or paper. This gives a
 decided advantage in action, an advantage almost
 equal to one gun in three; for, as a sheet-lead

* Clark's Naval History, vol. ii. pp. 236, 246.

cartridge will hardly ever leave a particle of itself behind, there is no necessity to sponge the gun, and very seldom any to worm it: operations that, with paper or flannel cartridges, must be attended to every time the gun is fired. The advantage of quick firing, no one can dispute; any more than, from the explanation just given, the facility with which it can be practised by means of the sheet-lead cartridge. The principal objection against the use of this kind of cartridge in the british navy is its expense: another may be, that it causes the powder to get damp. The last objection is obviated by filling no more cartridges than will serve for present use; and, should more be wanted, the Americans have always spare hands enough to fill them.

Although, in the american accounts of actions, no other description of cannon-shot is ever named as used on board their ships, than "round and grape," it is now so well known as scarcely to need repetition, that the Americans were greatly indebted, for their success over the British, to a practice of discharging, in the first two or three broadsides, chain, bar, and every other species of dismantling shot, in order to cut away the enemy's rigging and facilitate the fall of his masts. As an additional means of clearing the decks of british ships of the (seldom over numerous) men upon them, the carronades, when close action commenced, were filled with jagged pieces of iron and copper, rusty nails, and other "langridge" of that description. Of the riflemen in the tops we have already spoken; but even the remaining musketry-men of the crew were provided in a novel and murderous manner: every cartridge they fired contained three or four buck-shot, it being rightly judged, that a buck-shot, well placed, would send a man from his quarters as well as the heaviest ball in use. We mention these circumstances, not to dwell, for a moment, upon their unfairness, but merely to show the extraordinary means to which the Americans resorted, for the

on the
action.

Even this statement, with the one-third disparity in guns, and nearly two-fold disparity in men, which it exhibits, will not convey a clear idea of the real inequality of force that existed between the *Guerrière* and *Constitution*, without allowance is made for the ineffective state in which the former ship commenced the action. There is one circumstance, also, which has greatly contributed to mislead the judgment of the public in deciding upon the merits of this and its succeeding fellow-actions: a belief, grounded on the official accounts, that british frigates, of the *Guerrière*'s class, had frequently captured french frigates, carrying 24-pounders on the main deck. But, in truth, the *Forte* is the only 24-pounder french frigate captured by a british 38-gun frigate; and the *Forte*, in point of force and readiness for action, was not to be compared with the *Constitution*.* That even french 18-pounder frigates were not, in common cases, captured by british frigates of the same class, without some hard fighting, and a good deal of blood spilt on both sides, these pages afford many proofs. Upon the whole, therefore, no reasonable man can now be surprised at the result of the action between the *Guerrière* and *Constitution*. Nor was there in the conduct of the *Guerrière*, throughout the engagement, any thing that could militate, in the slightest degree, against the long-maintained character of british seamen. With respect to captain Dacres, he evinced a great share of personal bravery on the trying occasion; and we confess ourselves to have been

* See vol. ii. p. 338.

among the number of those who did not recollect that, although the *Guerrière* had made herself very obnoxious to the Americans, it was before captain Dacres was appointed to her. 1812.
Aug.

The chief cause of quarrel between the Americans and the *Guerrière* undoubtedly arose while captain Pechell commanded her; but still it was the same ship, or, to those who doubted that fact, a ship of the same name, which captain Hull had captured. Most desirable, therefore, would the *Guerrière* have been as a trophy; but the shattered state of her hull precluded the possibility of getting the ship into port. At daylight on the day succeeding the action, the american prize-master hailed the *Constitution*, to say that the *Guerrière* had four feet water in the hold, and was in a sinking condition. Quickly the prisoners were removed out of her; and at 3 h. 30 m. *p.m.*, having been set on fire by captain Hull's orders, the *Guerrière* blew up. Guer-
rière is
de-
stroyed

Having by the evening repaired her principal damages, including a few wounds in each of her three masts, the *Constitution* made sail from the spot of her achievement, and on the 30th anchored in the harbour of Boston. As may well be conceived, captain Hull and his officers and crew were greeted with applause by their native and adopted countrymen. He and they also received, at a subsequent day, the thanks of the government, accompanied by a present of 50000 dollars. Consti-
tution
arrives
at
Boston

It is a singular fact, that, in the letter published in the "*National Intelligencer*," as that transmitted by captain Hull to his government, not a word appears respecting the force of the ship which the *Constitution* had captured. Captain Hull's letter is in this respect an anomaly of the kind. Perhaps, as the american newspapers had frequently stated, that the *Constitution* mounted 56 guns, and as dead ships, like dead men, "tell no tales," captain Hull thought it better to leave his friends and countrymen to form their opinion, relative to the force and size of his Capt.
Hull's
letter.

1812. prize, out of the following sentence: "So fine a
 Aug. ship as the *Guerrière*, commanded by an able and experienced officer." If captain Hull did practise this ruse, (and the men of Connecticut are proverbially shrewd,) the effect, as we shall presently see, must almost have exceeded his hopes.

The
 british
 38 and
 ameri-
 can 44
 gun fri-
 gates
 not a
 match.
 When a british says to an american officer, "Our frigates and yours are not a match," the latter very properly replies: "You did not think so once." But what does this amount to? Admitting that the force of the american 44-gun frigate was fully known before the *Guerrière's* action, but which was only partially the case; and admitting that the british 38-gun frigate was considered able to fight her, all that can be said is, that many, who once thought otherwise, are now convinced, that an american and a british ship, in relative force as three to two, are not equally matched. The facts are the same: it is the opinion only that has changed. Man the *Constitution* with 470 Turks or Algerines; and even then she would hardly be pronounced, now that her force is known, a match for the *Guerrière*. The truth is, the name "frigate" had imposed upon the public; and to that, and that only, must be attributed the angry repinings of many of the british journalists at the capture of the *Guerrière*. They, sitting safe at their desks, would have sent her and every soul on board to the bottom, with colours flying, because her antagonist was "a frigate;" whereas, had the *Constitution* been called "a 50-gun ship," a defence only half as honourable as the *Guerrière's* would have gained for her officers and crew universal applause.

Credit
 due to
 captain
 Hull
 and his
 officers.
 Captain Hull, and the officers and men of the *Constitution*, deserve much credit for what they did do; first, for attacking a british frigate at all, and next, for conquering one a third inferior in force. It was not for them to reject the reward presented by the "Senate and house of representatives of the United States," because it expressed to be, for

capturing a frigate, (now for the effect of captain 1812.
Hall's "fine ship Guerrière") "mounting 54 carriage-
guns"; instead of, with two standing bow-chasers and Aug.
a boat-carronade included, 49. Smiling in their
sleeves at the credulity of the donors, the captain
and his people, without disputing the terms, pocketed
the dollars. But is a writer, who stands pledged to
deal impartially between nation and nation, to forbear
exposing this trickery, because it may suit the Ameri-
cans to invent any falsehoods, no matter how bare-
faced, to foist a valiant character upon themselves?

The author of the american "Naval History,"
Mr. Clark, remarks thus upon the Guerrière's capture:
"It has manifested the genuine worth of the american
tar, and that the vigorous cooperation of the country
is all he requires, to enable him to meet, even under
disadvantageous circumstances, and to derive glory
from the encounter, with the naval heroes of a nation
which has so long ruled the waves."* But was it
really "american tars" that conquered the Guerrière?
Let us investigate, as far as we are able, this loudly-
asserted claim. Our contemporary says, "It appeared
in evidence on the court-martial, that there were many
Englishmen on board the Constitution, and these
were leading men, or captains of guns. The officers
of the Guerrière knew some of them personally, and
one man in particular, who had been captain of the
forecastle in the Eurydice, a british frigate, then re-
cently come from England. Another was in the Achille
at Trafalgar; and the third lieutenant of the Consti-
tution, whose name was Reed, was an Irishman. It
was said, and we have no reason to doubt the fact,
that there were 200 british seamen on board the
Constitution when she began the action."† One
fellow, who after the action was sitting under the half-
deck busily employed in making buck-shot cartridges
to mangle his honourable countrymen, had served
under Mr. Kent the first lieutenant. He now went
by a new name; but, on seeing his old commanding

 em-
 ploy-
 ment
 in the
 ameri-
 can
 navy
 proved
 by an
 ameri-
 can do-
 cument

In the latter end of the year 1816 a work issued from the Washington press, entitled "A register of officers and agents, civil, military and naval, in the service of the United States, &c." "Prepared at the Department of State, by a resolution of congress." Affixed to the list of names in this official document, is one column headed, "State or country where born." Turning to this column in the "Navy department," we find that, out of the 32 captains, one only, "Thomas Tingey," has "England" marked as his birthplace. There was another, we know; but he had died about a twelvemonth before, captain Smith of the Congress. Three blanks occur; and we consider it rather creditable to captains "John Shaw," "Daniel T. Patterson," and "John Orde Creighton," that they were ashamed to tell where they were born. Of the 22 masters commandant, one only appears to have been born out of the United States, and that is "George C. Read," of "Ireland;" the same, no doubt, mentioned by captain Brepton, as the third lieutenant of the Constitution in August, 1812. Of the 160 lieutenants, there appear to be only five born out of the United States; of which five, "Walter Stewart," "William Finch," and "Benjamin Page, jun." are stated to be of "England," and "James Ramage," of "Ireland." To 17 names, all english and irish, appears no birthplace. We shall pass over the surgeons, their mates, the pursers, chaplains, and midshipmen; among whom we find, besides a few blanks, only eight of England and Ireland. As we descend in the list, the blanks in the column of "Country where born" increase surprisingly. Now, as the native american seaman usually carries about him his certificate of citizenship; and, as scarcely any man is to be found who, if he can speak at all, cannot answer the question, "Where were you born?" we must consider that the birthplace is purposely omitted, because, being a native of Great Britain or Ireland, and probably a deserter from the british navy, the fellow is ashamed or afraid to

avow it. Hence, out of the 83 sailing masters, we find eight born in England, Scotland, Ireland, and Bermuda, and 15 without any birthplace assigned to them. Among the 20 boatswains, one is stated to have been born in England, four in the United States, and the rest nowhere. Of the 25 gunners, three appear to have been born in the United States, one in Germany, another in Portugal, and the remaining four fifths in some nameless country. Of the 18 carpenters, 11 sail-makers, and four master's mates, 33 in all, five only have been able or willing to enable the Washington state-clerk to fill up the important blank.

1812.
Aug.

Can any one, after the analysis we have given of this curious american state-document, entertain a doubt that, during the late war between Great Britain and the United States, one third in number, and nearly one half in point of effectiveness, of the seamen that fought in the ships of the latter were bred on the soil, and educated in the ships, of the former? This may appear very discreditable to british seamen, considered as a body; but it should be recollected, that the total of the seamen belonging to the american ships of war formed only a small portion of those employed in the british navy. Moreover, a large proportion of the deserters and renegades, that entered the service of the United States, were irish roman catholics. It is for this reason, that an american captain can sometimes assert, with no great degree of untruth, that he has few "Englishmen" among his crew.

Re-
marks
on the
subject

There were, it appears, on board the Constitution, so many men whom the crew of the Guerrière considered as their countrymen, so many who felt, as well they might feel, some degree of compunction at their fallen state, that captain Hull was afraid the two bodies united would overpower him and his Americans, and carry the Constitution to Halifax. He very naturally, and very properly, we think, "kept his prisoners manacled and chained to the deck during the night, and the greater part of the

Crew of
Guer-
rière;
put in
irons.

1812. day."* One reason for doing this, might be to
 Oct. render more alluring the offer of liberty made to those
 who would turn traitors. Being perfectly aware, that
 all the British, whom they could persuade to enter,
 would fight in the most desperate manner, rather
 than be taken and turned over to their certain as
 merited fate, captain Hull and his officers, as well
 while the Constitution was steering for Boston, and
 after she had arrived there, used every art to
 inveigle the late Guerrière's crew to enlist in the
 american service. Eight Englishmen, however, were
 all that remained in the United States; and only two
 of those entered on board the Constitution.

Court- On the 2d of the succeeding October a court-
 martial on board the Africa 64, Halifax
 captain harbour, to try the captain, officers, and late crew
 Dacres, of the Guerrière; when, as may be anticipated from
 his offi- the details already given, the following sentence of
 cers, acquittal was pronounced: "Having attended to the
 &c. whole of the evidence, and also to the defence of
 captain Dacres, the court agreed, that the surrender
 of the Guerrière was proper, in order to preserve the
 lives of her valuable remaining crew; and that her
 being in that lamentable situation was from the
 accident of her masts going, which was occasioned
 more by their defective state than from the fire of
 the enemy, though so greatly superior in guns and men.
 The court do, therefore, unanimously and honour-
 ably acquit the said captain Dacres, the officers
 and crew, of his majesty's late ship the Guerrière,
 and they are hereby honourably acquitted according.
 The court, at the same time, feel themselves called
 upon to express the high sense they entertain of the
 conduct of the ship's company in general, when pri-
 soners, but more particularly of those who withstood
 the attempts made to shake their loyalty, by offering
 them high bribes to enter into the land and sea
 service of the enemy, and they will represent their
 merit to the commander in chief."

* Brenton, vol. v. p. 54.

In his official letter, dated at Boston, September 7, captain Dacres compliments captain Hull and his officers, for their treatment of his men, "the greatest care being taken to prevent them losing the smallest trifle." But, considering perhaps that, in an enemy's country, it would be unwise to commit complaints to the chance of leading to further oppression, captain Dacres remained silent about the attempts to inveigle his crew, until he addressed the members of his court-martial at Halifax. The concluding passage of that address is in the following words: "Notwithstanding the unlucky issue of this affair, such confidence have I in the exertions of the officers and men who belonged to the *Guerrière*; and I am so well aware that the success of my opponent was owing to fortune, that it is my earnest wish, and would be the happiest period of my life, to be once more opposed to the Constitution, with them under my command, in a frigate of similar force to the *Guerrière*."

Ex-
tract
from
captain
Da-
cres's
address
at his
trial.

That the captain of the *Guerrière* should have expressed such an opinion on such an occasion is allowable enough; but we are surprised to find that opinion seconded by the captain of the *Spartan*, a frigate of the same force as the *Guerrière*, a frigate which the Constitution herself had just come from seeking when she fell in with the latter. "Thus far," says captain Brenton, "the two ships had fought with an equal chance of success, when the day was decided by one of those accidents to which ships of war are ever liable, and which can rarely be guarded against."* He then describes the fall of the *Guerrière*'s mizenmast. We are stopped, however, in the comments we were going to make, by observing, at the conclusion of the account of the *Guerrière*'s capture, the following paragraph, whether in confirmation or contradiction of the former passage, let others decide: "The inference is erroneous, (that

1819. our navy was declining and our officers and men
 Sept. deficient in their duty,) founded on a supposition, that, if two ships happen to be called frigates, the lesser one, being manned and commanded by Englishmen, ought to take the greater, though a ship very nearly double her force, in size, guns, and men: we need scarcely enter into any argument to prove the fallacy of such an expectation."*

Frolic sails from Honduras with convoy On the 12th of September the british 18-gun brig-sloop Frolic, captain Thomas Whinyates, quitted the bay of Honduras, with about 14 sail of merchantmen under convoy, for England. On arriving off Havana, the master of a Guernsey ship informed captain Whinyates of the war with America, and of the *Guerrière's* capture. Having been five years in the West Indies, and being very sickly in her crew, the Frolic was by no means in a fit state to encounter an enemy's vessel of a similar class to herself. However, there was no alternative; and the brig proceeded on her voyage along the coast of the United States.

Gets disabled in a gale. On the night of the 16th of October, in latitude 36° north, longitude 64° west, a violent gale of wind came on, which separated the Frolic from her convoy, carried away her main yard, sprung the main topmast, and tore both topsails to pieces. By dark on the evening of the 17th, six of the missing ships had joined; and on the 18th, at daybreak, while the Frolic, in a very turbulent sea, was repairing her damages, a sail hove in sight to-windward, which was at first taken for one of the convoy. But the near approach of the stranger, and her not answering signals, soon marked her for an enemy: whereupon, removing her main yard from off the casks and lashing it to the deck, the Frolic hauled to the wind under her boom-mainsail, and (her fore topmast having been sprung previously to the gale) a close-reefed fore topsail, in order to let her convoy pass sufficiently ahead to be out of danger.

Falls in with the Wasp.

* Brenton, vol. v. p. 54.

At a few minutes before 11 A.M., apprehensive that the strange ship of war might pursue the merchantmen instead of himself, captain Whinyates hoisted spanish colours as a decoy; having two days before passed a convoy under the protection of a spanish armed brig, and which convoy, it was imagined that the strange vessel might also have seen. The latter, which was the United States' 18-gun ship-sloop Wasp, captain Jacob Jones, five days only from the Delaware, immediately hoisted her colours, and bore down for the Frolic, then awaiting her approach on the larboard tack. On arriving within 60 yards of the Frolic, the Wasp hailed: whereupon, quickly exchanging her colours to british, the brig opened a fire of great guns and musketry. This was instantly returned by the Wasp; and, as the latter dropped nearer to her antagonist, the action became close and spirited. In less than five minutes after she had commenced firing, the Frolic shot away the Wasp's main topmast; and, in two or three minutes more, the latter's gaff and mizen topgallantmast also came down. The sea was so rough, that the muzzles of the guns of both vessels were frequently under water. Still the cannonade continued, with mutual spirit; the Americans firing, as the engaged side of their ship was going down, the British, when their engaged side was rising. The consequence was, that almost every shot fired by the Wasp took effect in her opponent's hull; while most of the Frolic's shot passed among the rigging or over the masts of the Wasp.

Being in a very light state from a deficiency of stores, and being unable, on account of the sprung state of her topmasts and the want of a main yard, to steady herself by carrying sail, the Frolic laboured much more than the Wasp, and experienced, in consequence, greater difficulty in pointing her guns with precision. In a minute or two after the Wasp's main topmast had come down, the Frolic's gaff head-braces were shot away. Having now no sail whatever

1812. upon the mainmast, the brig had lost the means of
 Oct. preventing the Wasp from taking a position on her
 larboard bow. A *ship* would not have been so cir-
 cumstanced, even had she lost her mizenmast by
 the board; as she could still have set a trysail upon
 her mainmast.

Frolic
 wholly
 unma-
 nage-
 able
 and de-
 fence-
 less.

Thus, in less than 10 minutes after the action had commenced, chiefly by her previous inability to carry sail, the Frolic lay an unmanageable hulk upon the water, exposed to the whole raking fire of her antagonist, without the possibility of returning it with more than one of her bow guns. The Wasp continued pouring in broadside after broadside, until, believing that he had so thinned the deck of the british brig, that no opposition could be offered, captain Jones determined to board and end the contest. The Wasp accordingly wore, and, running down upon the Frolic, soon brought the latter's jib-boom between her fore and main rigging, and two of her own carronades in a direction with the bow ports of her defenceless antagonist. Having so fine an opportunity of further diminishing the strength of his opponent, captain Jones would not board until a raking fire was poured in: it was poured in, and swept the whole range of the Frolic's deck.

Ameri-
 cans
 board
 and
 strike
 the
 colours

A british seaman belonging to the Wasp, named Jack Lang, was now about to spring on the brig's bowsprit and put a stop to the carnage; but captain Jones, observing that some one yet lived on the Frolic's deck, pulled him back, and ordered another broadside to be fired. At length, when the action altogether had lasted 43 minutes, and when the american ship had had nearly the whole firing to herself for 33 minutes, the officers and men of the Wasp, led by lieutenant George William Rodgers, boarded the Frolic. The Americans, according to their account, did not see a single man alive upon the Frolic's deck, except the seaman at the wheel and three officers. Two of those officers were captain Whinyates and his second lieutenant, Frederick

Boughton Wintle; both so severely wounded as to be unable to stand without supporting themselves. ^{1812.}
 Contrary to the american statement, however, 17 of the Frolic's men were also on deck. The remainder of the survivors were below, attending to the wounded, and performing other necessary duties. Lieutenant James Biddle, first of the Wasp, had now the honour of striking the Frolic's colours, as they were lashed to the main rigging. ^{Oct.}

The Frolic was of course much shattered in her hull; and her two masts, from the wounds they had received, fell over the side in a few minutes after her surrender. Out of her 92 men (including one passenger, an invalided soldier) and 18 boys, the Frolic had 15 seamen and marines killed, her commander, two lieutenants, (Charles M'Kay, mortally, and Mr. Wintle,) master, (John Stephens, mortally,) and 43 seamen and marines wounded. The Wasp received a few shot in her hull, one near her magazine; and her three lower masts were wounded, but, owing chiefly to the goodness of the sticks, none of them fell. The american sloop began the action with a crew of 138, one of whom was a lad of 17 or 18 years of age, the remainder young and able-bodied seamen, with, as subsequently proved, many British among them; and even the midshipmen, of whom the Wasp had 12 or 13, while the Frolic had but one, and he a boy, were full-grown men, chiefly masters and mates of american merchantmen. Out of this fine crew, the Wasp had eight killed, and about the same number wounded. ^{Damage and loss on each side.}

The Frolic was armed like every other vessel of her class, with 16 carronades, 32-pounders, and two long sixes. The brig had also the established 12-pounder carronade for her launch, mounted on the usual elevating carriage; and she had likewise on board a second 12-pounder carronade, taken out of some prize probably, but it was dismounted and lashed upon the forecastle. As the boat-carronade, when used at all in action, can only be fired *en barbette*, we ^{Guns mounted by each vessel.}

1812. shall not consider it as worthy a place among the
 Oct. broadside-guns. The Wasp mounted 16 carronades, 32-pounders, and two brass long 12-pounders, exclusively of two brass 4-pounders, one of which was usually mounted in the fore, and the other in the main top; but, in consequence of the gale, they had been brought on deck. Although strictly speaking, there was not a single boy belonging to the Wasp, we shall allow three. The following, therefore, will be the

With her masts entire, and a healthy, instead of a debilitated crew, the Frolic would have encountered a tolerably equal opponent. As the matter stood, her officers and men deserve great credit, for maintaining a resistance so long after their vessel had become unmanageable and defenceless. Surely, there was nothing in the result of this action, that could cast the slightest slur upon the british naval character; and yet, with the wonted exaggerations of american officers, the latter made it, as we shall see presently, a victory over a superior force.

Wasp

tiers.

Captain Jones, however, was not allowed to carry his trophy, his "22-gun sloop of war," into port; for, in the course of a few hours after the action, the british 74-gun ship Poitiers, captain John Poer Beresford, heaving in sight, captured one vessel and recaptured the other. With a just appreciation of the merits of captain Whinyates, captain Beresford continued him in the command of the Frolic. At the court-martial which was subsequently held upon the captain, officers, and crew of the Frolic, for the loss of their vessel, they were, as a matter of course, most honourably acquitted. Captain Whinyates, although he was unacquainted with the circumstance, had been

made a post-captain since the 12th of the preceding August. 1812.
Oct.

A word or two upon the american official account of this action. Captain Jacob Jones describes the vessel he captured, as "the british sloop of war Frolic, of 22 guns, 16 of them 32 lb. carronades, and four 12-pounders on the main deck, and two 12-pounders, carronades, on the topgallant forecastle; making her," says captain Jacob Jones, "superior in force to us by four 12-pounders." Unfortunately for captain Jacob Jones, lieutenant Biddle, without his privity, wrote a letter to his father in Philadelphia, in these words: "The Frolic was superior in force to us; she mounted 18 32 lb. carronades, and two long nines. The Wasp, you know, has only 16 carronades." Mr. Biddle, being a man of some note, got his son's letter into the Philadelphia papers as quickly as Mr. Paul Hamilton, the secretary of the american navy, could get the letter of captain Jacob Jones into the "National Intelligencer." Here was a business! Comments are unnecessary. Suffice it that, neither letter contained a word relative to the disabled state of the Frolic when the action commenced; and that the Congress of the United States, willing believers in a matter so flattering to their self-love, voted 25000 dollars, and their thanks, to captain Jacob Jones, the officers, and crew of the Wasp; also a gold medal to captain Jones, and silver medals to each of the officers, in testimony of their high sense of the gallantry displayed by them in the capture of the british sloop of war Frolic, of "superior force." American
squadron
sails
from
Boston.

On the 8th of October the american commodore Rodgers, with the same three frigates he commanded before,* accompanied by the brig-sloop Argus, captain Arthur Sinclair, sailed from Boston upon his second cruise against british men of war and merchantmen. On the 10th, at 8 A.M., when in latitude 41° north, longitude 65° west, steering to the westward, with a light

Chases
Nymph
who es-
capes.

northerly wind, the squadron discovered ahead the british 38-gun frigate *Nymph*, captain Farmery Predam Epworth. The *Nymph* hauled on the star-board tack in chase; and at noon, finding the private signal not answered, captain Epworth made out the three ships and brig to be american cruisers. At 4 h. 30 m. P.M. the *Nymph* boarded a swedish brig from the island of St-Bartholomew to New-York; and which, at 8 P.M., was boarded by the american squadron. With the intelligence thus gained, commodore Rodgers proceeded in chase; but, in the course of an hour, lost sight of the british frigate.

United-
States
parts
compa-
ny and
falls in
with
the
Mace-
donian.

On the 12th of October the frigate *United-States* parted company; and we shall at present follow her fortunes. On the 25th, soon after daylight, in latitude 29° north, longitude $29^{\circ} 30'$ west, this american 44, being close hauled on the larboard tack with the wind blowing fresh from the south-south-east, descried, on her weather beam, at the distance of about 12 miles, the british 38-gun frigate *Macedonian*, captain John Surman Carden. The *Macedonian* immediately set her fore topmast and topgallant studding-sails, and bore away in chase, steering a lasking course for the weather bow of the stranger.

Latter
pro-
ceeds
in
chase.

While the tracks of the two ships are thus gradually converging, we will give an account of the force of each. In addition to her 28 maindeck long 18-pounders, the *Macedonian* mounted on the quarterdeck and forecastle 16 carronades, 32-pounders, fitted with their chocks outside, (a new, but, as far as we can learn, not much approved principle,) two long 12-pounders, and two brass long french 8-pounders, (the captain's private property,) total 48 guns, exclusive of the usual 18-pounder launch carronade. The crew of the *Macedonian* at this time consisted of 262 men and 35 boys. To account for this extraordinary proportion of boys, we must state that, shortly before the *Macedonian* sailed on her last cruise, 12 supernumerary boys were put on board, by way, possibly, of "strengthening" her crew.

Force
of the
two
ships.

With respect to the quality of the 35 boys, very few of them, it appears, were worth ship-room. It has already been shown, that the established armament of the United-States was 56 guns, long 24-pounders, and 42-pounder carronades.* Subsequently the ship appears to have landed two of her 42s, and to have received on board, in lieu of them, a travelling 18-pounder carronade; making her carriage-guns, in all, 55. She also mounted a brass howitzer in each top. With respect to crew, the United-States victualled 477 men and one lad or boy.

1812.
Oct.

At about 7 h. 30 m. A. M. the two ships were not above three miles apart. Having by this time hoisted her ensign and broad pendant, the United-States was known to be one of the american 44s; but, having on board one of commodore Rodgers's spy-glasses, commodore Decatur mistook the Macedonian for a much larger ship, a sail of the line probably. The United-States accordingly wore round on the starboard tack, keeping a point or two off the wind. Having sailed from Portsmouth as long ago as the 29th of September, captain Carden, although he knew of the war, had received no information of the Guerrière's capture. The Macedonian had since been at Madeira, where she had heard that the american frigate Essex was cruising; but, even had the force of the United-States in guns and men been at this time fully known, such was the confidence of victory on board the Macedonian, that every officer, man, and boy, except perhaps the eight foreigners, who requested and were allowed to go below, was in the highest spirits.

United-
States
wears
from
the
Mace-
donian.

As, from sailing better than the United-States, the Macedonian gradually advanced more fully into view, the american officers seem to have fallen into the opposite mistake. They now believed the Macedonian to be a 32-gun frigate; and, with the determination to attack her, the United-States, at 8 h. 30 m. A. M., wore round on the larboard tack, and hauled sharp up. This brought the two ships, at 8 h. 45 m., into the

United-
States
wears

to meet
the
Mace-
donian.

* See p. 7.

1812. relative positions marked in the diagram at p. 168.

Oct. Knowing that the greatest force of his ship lay in her quarter, and the smallest force of the enemy's ship in her bows, the first lieutenant of the Macedonian wished that the latter should continue her course, so as to pass ahead of the United-States, in the manner represented by the strong line in the diagram. But, captain Carden having decided to keep the weather-gage, the Macedonian hauled close to the wind. At 9 A. M., when abreast of the United-States on the opposite tack, the Macedonian received her passing fire; but it did not produce the slightest effect, the principal part of the shot falling short of, and the rest going over her.

fires.

United-
States
main-
tains a
run-
ning
fight.

Hauls
up to
close.

The rubicon being now passed, the Macedonian wore in pursuit; and, owing to her superiority of sailing already noticed, reached, at about 9 h. 20 m. A. M., a position on the larboard quarter of the american frigate. Here a broadside was exchanged; by that discharged from the Macedonian, the mizen topgallantmast of her opponent was shot away; and, by that from the United-States, the Macedonian lost her gaff halliards and mizen topmast, the latter falling into the main top. "This," as a contemporary well observes, "produced an equality in the rate of sailing, and the United-States kept her enemy in one position on the quarter in a running fight."* The United-States steered about two points off the wind, and, by her diagonal fire, soon cut away the chock of, and dismounted, every carronade upon the starboard side of her opponent's quarterdeck and forecastle, besides shattering the Macedonian's hull, and disabling a great portion of her crew. Having by this means reduced his antagonist to the use of her main-deck battery only, and increased the disparity that previously existed to more than double, commodore Decatur, at about 10 h. 15 m. A. M., laid his main topsail to the mast, and allowed the Macedonian, now that it was too late, to come to close action.

By a few minutes past 11 A. M. the Macedonian

* Brenton, vol. v. p. 59. See also diagram at p. 168.

had had her mizenmast shot away by the board, and which had fallen over the starboard or engaged quarter, her fore and main topmasts shot away by the caps, and her main yard in the slings, her lower masts badly wounded, rigging of every sort destroyed, a small portion only of the foresail left to the yard, and two guns on the main battery, and all on the upper but two, disabled. The ship had also received upwards of 100 shot in her hull, several of them between wind and water; and had all her boats, except the jollyboat towing astern, destroyed, and more than a third of her crew killed and wounded. Owing, likewise, to the heavy sea and her dismasted state, the Macedonian rolled her maindeck guns under water; while the United-States, having no sail that she could not set but her mizen topgallantsail, remained perfectly steady.

1814.
Oct.

Dis-
abled
state of
Mace-
donian.

In this dreadful state, the men of the Macedonian still possessed the spirit of british seamen; and, at 11 h. 10 m., when the United-States was making sail, to get from under the lee of her opponent, and the british frigate, as a last resource, had put her helm a-weather, with the intention of laying the american frigate on board, "every man was on deck," says lieutenant (now captain) Hope, "several who had lost an arm, and the universal cheer was, 'Let us conquer or die.'"^{*} Fortunately, considering the unnecessary carnage that must have ensued, the fore brace was at that moment shot away, and the yard, swinging round, threw the ship up in the wind. The United-States then stood athwart the bows of the Macedonian, without firing a shot; having, it appears, expended all her cartridges. This circumstance, being unknown on board the Macedonian, led to a very erroneous impression; and the crew continued to cheer after an enemy, who, until the United-States hove to out of gun-shot, they supposed was making off. As soon as she had refilled her cartridges and refitted her rigging, the United-States tacked, and at about noon stationed herself in a raking position across the stern of her defenceless

ed be-
havi-
our of
her
crew.

Mace-
donian
surren-
ders.

^{*} Marshall, vol. ii. p. 1018.

1812. antagonist; who, having no means of making a
Oct. further resistance, struck her colours.

The following diagram is intended to represent the movements of the two ships, from the time that the Macedonian hauled up to pass to-windward of the United-States, to the termination of the contest.

Loss on board Macedonian. Of her 254 men (deducting the eight foreigners who refused to fight) and 35 boys, the Macedonian had her boatswain, (James Holmes,) one master's mate, (Thomas James Nankivee,) her schoolmaster, (Dennis Colwell,) 23 seamen, two boys, and eight marines killed, her first lieutenant, (David Hope, severely,) third lieutenant, (John Bulford, slightly,) one master's mate, (Henry Roebuck,) one midshipman, (George Greenway,) one first-class volunteer, (Francis Baker,) 50 seamen, (two mortally,) four boys, (two with each a leg amputated,) and nine marines wounded; total, 36 killed and 68 wounded.

The United-States is represented, by her captain

and his officers, to have had her masts and rigging not materially injured, and to have received only nine shot in her hull. "It is remarkable," adds one of her officers, "that, during an action of one hour and a half, and a fire which I believe was never equalled by any single deck, not an accident occurred, nor a rope-yarn of our gun-tackle strained." Her loss, from the same authority, amounted to no more than five seamen killed, lieutenant John Musser Funk and one seaman mortally, and five others badly wounded. The slightly wounded, as in all other american cases, are omitted.

1812.
Oct.

Same
on
board
United-
States.

With respect to the damage sustained by the United-States, although commodore Decatur makes very light of it, captain Carden represents, that the United-States "was pumped out every watch till her arrival in port, from the effect of shot received under water, and that two 18-pounders had passed through her mainmast in a horizontal line."* The masts of the american 44, it should be stated, are as stout as those of a british 74-gun ship; and, to render them still more secure from the effects of shot, four large quarter-fishes are girthed upon them. Although none of her masts, except her mizen topgallantmast, were shot away, the rigging of the United-States was much cut. The reason that the american frigate had to refill her cartridges, all of which had been expended in the action, has already appeared;† and one of her officers, in a letter to a friend, exhibits the practical advantages of sheet-lead cartridges in the statement, that, during the time the Macedonian was firing 36 broadsides, the United-States fired 70. But an allowance must here be made for the inability of the Macedonian, during a third at least of the action, to bring more than a few of her bow-guns to bear.

Da-
mage
to Uni-
ted-
States.

We shall, as in the case of the Guerrière, exclude from the broadside force, the Macedonian's boat-carronade. We might be justified in doing the

Guns
of each
ship in
broad-
side.

* Marshall, vol. ii. p. 1019.

† See p. 149.

1812. same with the two french 8-pounders; for, it ap-
 Oct. pears, they "were only fired once, the solder,
 by which pieces of metal for securing the locks had
 been affixed to them, having run the first discharge,
 and filled the touch-holes."* With respect to the
 United-States, we shall exclude her top-guns, al-
 though, during the time the close action lasted, they
 were used incessantly and with considerable effect,
 the shot from them frequently passing through the
 Macedonian's decks as she rolled; but the travelling
 carronade, having a port expressly fitted for its
 reception,† we shall estimate as a part of the broad-
 side force, and consider to have been an 18-pounder,
 although we are doubtful if it was not a 24. Captain
 Carden appears to think that he has underrated the
 crew of the United-States, and that the number,
 instead of being 478, as expressed in his official
 letter, ought to be 509, "the officers' names not being
 entered in her victualling book."* We differ from
 him on this point, and shall abide by his official state-
 ment; allowing four boys, although one only was
 seen, and he was at least 17 years of age.

Error
 re-
 spect-
 ing the
 ton-
 nage
 of the
 United-
 States.

Upon the authority of a statement made by captain
 Carden, Mr. Marshall has represented the size of
 the United-States to be "1670 tons," as "taken
 from the register of New-York dock-yard."* In
 the first place, there was no national dock-yard at
 New-York, until long after the United-States was
 launched. Secondly, that frigate, as we have
 already shown, was built at Philadelphia. Thirdly,
 1670 tons, american measurement, which the state-
 ment must mean, if it means any thing, would be
 equal to 1800 english; thus swelling the american
 44-gun frigate to a most extravagant size indeed.
 In direct opposition to this, a british officer of dis-
 tinction was informed by an officer belonging to the
 United-States, at a time when there was no motive to
 deceive, that that frigate measured between 1400
 and 1500 tons; which, allowing for the difference

* Marshall, vol. ii. p. 1013.

† See p. 7.

already pointed out between british and american tonnage, nearly agrees with our account. Had the note subjoined by Mr. Marshall, in support of the accuracy of the "1670" set forth in his text, run thus, we think it would come near to the truth: "Taken from the columns of the New-York Daily Advertiser;" for we recollect seeing some statement of the kind in a New-York paper, but then it was in the form of an extract from an english paper, and was merely given at length, in order that the american editor might expose its absurdity.

1812.
Oct.

Mr. Marshall has also inserted the following passage respecting the scantling of the United-States. "The United-States was superior to any ship of her class in the american navy. Her sides, on the cells of her maindeck ports, were of the same scantling as our 74-gun ships on their lowerdeck port-cells, composed of live-oak; and her sides such a mass of this wood, that carronade grape would scarcely penetrate them. She was termed the 'Waggon of the american navy,' from her thick scantling, having been originally intended for a larger class ship; and her masts were precisely of the same dimensions as those of our then second-class 74s."* Into this subject we have already fully entered; but we believe the nickname of Wagon was given to the United-States on account of her being, in comparison with her two class-mates, a slow sailer; and we well remember asking an American the reason of her being so named, and receiving for a reply, "Because she was built by an Englishman." In further proof that the United-States was built of larger scantling than the President, commodore Chauncey, as we stated more than nine years ago, in a conversation respecting the capture of the President, held with some british naval officers since the peace, declared, that he would much rather fight a battle in the frigate United-States, because her sides were stouter than

relative
force.

A greater disparity, in broadside weight of metal, than even in the *Guerrière's* case: what then must have been the disparity, when the Macedonian's carronades had become disabled? There was, however, in this case, no deteriorated powder to weaken the effect of the remaining guns; and yet the shot from them made very little impression upon the hull or masts of the United-States. This state of impunity, as well as much of the opposite effect produced on board the british frigate, was attributable, after the first opportunity of closing had been missed by the Macedonian, to the Parthian or retreating mode of fighting adopted by her antagonist. Had the United-States brought to in a bold, and, considering her great superiority of force, becoming manner, the action would have been sooner decided, and the disparity between the two ships, in point of execution, not have been so great. No imputation rests upon the Macedonian's crew, for, to the very last, they behaved well; nor could the gallantry of the first lieutenant, David Hope, be well exceeded: he was severely wounded in the leg at the commencement, and more severely still in the head towards the close, of the battle, and then taken below, but was soon again on deck, filling his post as became a brave officer.

Quality
of the
crew
of the
United-
States.

The crew of the United-States were the finest set of men ever seen collected on ship-board. Had captain Decatur and his five lieutenants been below in the hold, there were officers enough among the ship's company to have brought the action to the same successful issue. As it was, however, the american captain and the american officers gained all

the credit, and pocketed the principal part of the cash; while the poor silly Britons, whose prompt attention to the sails, and steady perseverance at the guns, had contributed so mainly to the victory, slunk away in the back-ground, disowned by those whom they had so effectually served, and scorned and scouted by those, against whom they had so traitorously fought.

1812.
Oct.

That a very great proportion of the crew of the United-States were british seamen, will have been assumed from our previous statements on the subject. That such was the fact was proved, by several of the Macedonian's men recognising old shipmates. One of the officers' servants, a young lad from London, named William Hearne, actually found among the hostile crew his own brother! This hardened traitor, after reviling the british, and applauding the american service, used the influence of seniority, in trying to persuade his brother to enter the latter. The honourable youth, with tears in his eyes, replied: "If you are a d—d rascal, that's no reason I should be one." It appears, likewise, that one of the Macedonian's quartermasters had served his time with many of the crew of the United-States, out of the ports of Sunderland, Shields, and Newcastle. The great proportion of british seamen among the crew of the american frigate accounted for so many of her guns being named after british ships, and some of the most celebrated british naval victories. "Captain Carden," says Mr. Marshall, observing 'Victory' painted on the ship's side over one port, and 'Nelson' over another, asked commodore Decatur the reason of so strange an anomaly; he answered, 'the men belonging to those guns served many years with lord Nelson, and in the Victory. The crew of the gun named Nelson were once bargemen to that great chief, and they claim the privilege of using his illustrious name in the way you have seen.' The commodore also publicly declared to captain Carden, that there was not a seaman in his ship, who

British
seamen
among
them.

1812. had not served from five to 12 years in a british man
 Oct. of war."* After reading this, we naturally take up
 the "Register," which has already been so useful to
 us, to see of what state commodore Decatur was a
 native: we find, as we expected, that he did not
 come so far north as captain Hull, having been
 born in Maryland, Virginia.

Beha-
 viour
 of com-
 mo-
 dore
 Deca-
 tur to
 captain
 Carden
 and his
 officers

"The manner," says Mr. M., "in which captain
 Carden was received by his generous enemy, after the
 surrender of the Macedonian, is worthy of mention.
 On presenting his sword to commodore Decatur, the
 latter started back, declared he never could take the
 sword of a man who had so nobly defended the honour
 of it, requested the hand of that gallant officer, whom
 it had been his fortune in war to subdue, and added
 that, though he could not claim any merit for cap-
 turing a ship so inferior, he felt assured captain
 Carden would gain much, by his persevering and truly
 gallant defence. The commodore subsequently
 gave up all the british officers' private property, ex-
 tending his generosity to even a quantity of wine,
 which they had purchased at Madeira for their friends
 in England."† That commodore Decatur should
 have held out his hand to captain Carden, will not be
 considered surprising, when we state that, not many
 months before, the two officers had met as friends
 in Chesapeake bay; nor will it appear extraordinary
 that, on seeing his old acquaintance, the former
 should have "started back," especially when he
 recollected the opinion which captain Carden, in
 some friendly disputation about the relative force
 of their two frigates, had given, respecting the
 comparative effectiveness of 18 and 24 pounders.
 Commodore Decatur's treatment of the Macedonian's
 late officers, and his behaviour about the wine, was
 certainly very creditable to him: we may perhaps
 come to something presently, which will be, in the
 language of the law, a good set-off.

With the profusion of stores of every sort which

* Marshall, vol. ii. p. 1019.

† Ibid. p. 1014.

was to be found on board the american frigate, with 1812.
 so many able seamen that could be spared from her O et.
 numerous crew, and with all the advantages that a Time
 fortnight's calm weather gave him, it took the whole taken
 of that time to place his prize in a seaworthy state; to refit
 a clear proof how much she had been shattered. the
 That service accomplished, the two frigates, the Macedonian.
 the Macedonian under the command of lieutenant Wil-
 liam Henry Allen, late first of the United-States,
 made sail towards the coast of America. Owing to
 adverse and baffling winds, the ships were until
 noon on the 4th of December, ere they came in sight
 of New-London lighthouse, on their way through the
 Sound to New-York. Singular indeed was it, that
 these two frigates, one so crippled in her masts,
 should have been, during a passage of more than
 five weeks, not merely unmolested, but, as far as
 we know, unseen, by a single british cruiser. On
 her arrival at New-York, the Macedonian was of
 course purchased by the american government, and,
 being nearly a new ship, (built in 1810,) became
 a great acquisition to the republican navy; in which,
 under the same name, she was rated as a 36-gun
 frigate, and was the smallest ship of her class.

It was not enough for the lieutenants, petty-officers,
 and seamen of the frigate United-States, to try
 the effect of their eloquence upon the late crew of
 the Macedonian; commodore Decatur must use his
 personal endeavours to inveigle them into the ser-
 vice of their country's enemy. On arriving off New-
 London, as if the shrewd-inspiring air of Connecti-
 cut had already begun to exert its influence, the
 commodore sent the british officers on shore on their
 parole; meaning to carry the Macedonian's late crew
 with him to New-York. These he threatened to
 put in the prison-ship there, if they did not immedi-
 ately enlist. Fortunately for the poor fellows some
 delay arose in the two ships moving from before New-
 London; and, in the mean time, the british officers on
 shore became acquainted with the very honourable

scheme of an american officer, "who," says captain Brenton, "was an ornament to his country."* The officers remonstrated with the commodore on the subject, and returned on board. The consequence was, that the seven or eight foreigners, who were fiddlers and trumpeters on board the Macedonian, and three or four others of her late crew represented as Americans, were all that entered the american service.

Letter
of capt.
Decatur.

In his letter to the secretary of the american navy, captain Decatur gives his prize, "49 carriage-guns;" thus officially reckoning, for the first time, we believe, a boat-carronade found on board a captured frigate. He describes the Macedonian to be of the "largest class." What then must the United-States be, that was full one-fourth larger? He says: "The enemy, being to-windward, had the advantage of engaging us at his own distance, which was so great, that for the first half hour we did not use our carronades, and at no time was he within the complete effect of our musketry and grape; to this circumstance, and a heavy swell, which was on at the time, I ascribe the unusual length of the action." In answer to this, captain Carden says, that one of the first shot that struck the Macedonian was a 42-pounder, which killed the sergeant of marines.† "The damage," says the commodore, "sustained by this ship was not such as to render her return into port necessary; and, had I not deemed it important that we should see our prize in, should have continued our cruise."

His re-
ward
for his
victory.

Not a word is there in commodore Decatur's letter to lead the public to suppose, that he had captured a ship of "inferior force."‡ What he may have said in private was one thing; what he was magnanimous enough to tell to the world is another. His end was answered. The national legislature of the United States voted their thanks to commodore Decatur, his officers, and crew; also a gold medal to the commodore, and silver medals to each of the officers,

* Brenton, vol. v. p. 61.

† Marshall, vol. ii. p. 1013.

‡ See p. 174.

in honour of "the brilliant victory gained by the frigate United-States over the british frigate Macedonian." A special committee also determined, that the Macedonian was quite equal to the United-States ; and, an act of congress of the 28th of June, 1798, having provided that, "if a vessel of superior, or equal force, shall be captured by a public-armed vessel of the United States, the forfeiture shall accrue wholly to the captors," the amount of the Macedonian's valuation, 200000 dollars, was paid over to commodore Decatur, his officers, and crew.

In March, 1813, captain Carden, his officers, and surviving crew arrived from the United States at the island of Bermuda, and on the 27th of the succeeding May were tried for the loss of their ship. The following was the sentence pronounced : "Having most strictly investigated every circumstance, and examined the different officers and ship's company ; and having very deliberately and maturely weighed and considered the whole and every part thereof, the court is of opinion ; that, previous to the commencement of the action, from an over anxiety to keep the weathergage, an opportunity was lost of closing with the enemy ; and that, owing to this circumstance, the Macedonian was unable to bring the United-States to close action until she had received material damage. But, as it does not appear that this omission originated in the most distant wish to keep back from the engagement, the court is of opinion, that captain John Surman Carden, his officers, and ship's company, in every instance throughout the action, behaved with the firmest and most determined courage, resolution, and coolness ; and that the colours of the Macedonian were not struck, until she was unable to make further resistance. The court does therefore most honourably acquit captain John Surman Carden, the officers, and company of his majesty's late ship Macedonian, and captain Carden, his officers, and company, are hereby most honourably acquitted accordingly. The court cannot

officers

1812. dismiss captain Carden, without expressing their ad-
 Oct. miration of the uniform testimony which has been
 borne to his gallantry and good conduct throughout
 the action, nor lieutenant David Hope, the senior
 lieutenant, the other officers and company, without
 expressing the highest approbation of the support
 given by him and them to the captain, and of their
 courage and steadiness during the contest with an
 enemy of very superior force; a circumstance that,
 whilst it reflects high honour on them, does no less
 credit and honour to the discipline of his majesty's
 late ship *Macedonian*. The court also feels it a gra-
 tifying duty to express its admiration of the fidelity
 to their allegiance, and attachment to their king and
 country, which the remaining crew appear to have
 manifested, in resisting the various insidious and
 repeated temptations which the enemy held out to
 them, to seduce them from their duty; and which
 cannot fail to be duly appreciated."

Diffi- Of all the cases recorded in these pages, none are
 culty of giving details in de- so difficult to render intelligible as those in which
 feated cases. fect cases. british ships are defeated; first, because there is sel-
 dom any official letter, and next, because there is never
 any log, to refer to for particulars. It is true that, in
 each of the three frigate cases with *America*, an
 official letter was allowed to appear in the *London*
Gazette; but, of all three, (including, with the letter
 of captain *Dacres*, his address to his court-martial,) the
 letter of captain *Carden* is the most barren of
 details. It happens, also, that the letter of commo-
 dore *Decatur*, and the other american accounts of
 this action, are equally brief and unsatisfactory.
 Thus limited in means, we drew up and published our
 first account nearly nine years ago. It now appears,
 for the first time, that we overrated the *Macedo-*
nian's force by giving her 18 carronades, 32-pound-
 ers, instead of 16, with two long twelves; making
 a difference in the broadside-force of just 21 lbs.
 This very important oversight, and the strictures we
 were induced to pass upon what we supposed to be

the unskilfulness of the Macedonian's crew, have given rise to a very intemperate letter. The mistake about the guns is too trivial to notice; but we readily acknowledge, that we were wrong in supposing that the crew of the Macedonian were unpractised or inexperienced gunners: we have shown, we trust pretty clearly, what it was that occasioned their powder and shot to be so wastefully employed. The very first clause in the sentence of the court-martial fortunately bears us out in our statement; and we certainly feel much indebted to captain Carden, as well for the opportunity he has afforded us of amending our former account in that important particular, as for the stimulus he has given us to seek and obtain some additional facts connected with the action between the Macedonian and United-States.

1819.
Oct.

We have, as will be seen, borrowed a few paragraphs relating to this action from each of our two contemporaries, the post-captain and the lieutenant. The latter, whether he intends to bestow his praise or his censure, always alludes to us, in a becoming manner, by name; but the former usually prefers the indirect and, he will excuse us for adding, american fashion, of leaving his meaning to be "guessed" by the epithet he applies. Accordingly, captain Brenton says: "It need scarcely be noticed, that captain Carden has been accused by a very incompetent judge of running down to bring his enemy to action, in a heedless and confident manner. He ran into action as his brother officers had done, and will do again, to fight his enemy and decide the day as quickly as possible: how could captain Carden have closed sooner, &c." "His conduct has therefore been most cruelly misrepresented." "A court-martial acquitted him, his officers and crew, of all blame for the loss of the ship."* If we add a very fine compliment to commodore Decatur, and an account of his death, which took place 10 or 12 years afterwards, we have nearly all that is comprised in captain Brenton's account of

Capt.
Bren-
ton's
ac-
count.

to
escape.

Commodore Rodgers and his two frigates and brig-sloop now demand our attention. The Argus parted company on the same day as the United-States. On the 15th, when near the great bank of Newfoundland, the President and Congress fell in with and captured the Jamaica homeward-bound packet Swallow, with a considerable quantity of specie on board. On the 31st, at 9 A. M., latitude 32°, longitude 30°, they fell in with the british 36-gun frigate Galatea, captain Woodley Losack, having under her charge two South-sea whalers, the Argo and Berkeley, with which she had sailed from the island of Ascension on the 3d. At this time both parties were standing on the starboard tack, the Galatea, with the Berkeley in tow, to-windward. Casting off her tow, the Galatea bore down to reconnoitre; and at 10 A. M., discovering that the two strangers were enemies, she made the signal to her convoy to make the best of their way into port. Having arrived within about four miles upon the weather beam of the President, who with the Congress, in close line astern of her, was still on the starboard tack hastening to get to-windward, the Galatea hauled up on the same tack. The two american frigates now displayed their colours, and the commodore hoisted his broad pendant. Fortunately, for the Galatea, captain Losack had heard of the war three days before from the outward-bound indiaman Inglis.

At about noon the President tacked, as if to get into the wake of the Galatea; who began to be apprehensive that she should be placed between her two enemies, and was only relieved when she observed the Congress tack in succession. Shortly afterwards the Galatea herself tacked, and did so again upon the american ships tacking towards her. The Galatea now edged away, to get upon her best

point of sailing; and just at this moment the *Argo*,^{1812.} having bore up, in the vain hope of crossing the hawse of the american frigates and escaping to leeward, was intercepted by them. After the two frigates had lain to a long time, and witnessed, with apparent unconcern, the gradual departure of the *Galatea*, the President filled and made sail, but in such a manner as clearly indicated, that the commodore did not like to proceed in chase of the sister-ship of the *Belvidera*, unaccompanied by his consort. The President set her topmast studding-sails, then her topgallant, and lastly her lower studding-sails, and, as soon as it became dark, took all in and hauled to the wind. The *Galatea* of course escaped, although, being 93 men short of complement, she could scarcely have resisted an attack by the smaller of the two american frigates. Dec.

From the 1st to the 30th of November the President and Congress did not see a sail. They subsequently cruised between Bermuda and the Capes of Virginia, and on the 31st of December anchored in the harbour of Boston; having, in the course of their 84 days' unsuccessful cruise, been as far to the eastward as longitude 22° west, and to the southward as latitude 17° north. Soon after the arrival of these frigates at Boston, 25 of the crew of the Congress went on the quarterdeck to deliver themselves up as Englishmen. Captain Smith, who though an Englishman by birth, was an American by education, cunningly answered, "Very well; you shall go in the first cartel to Halifax, and be put on board the guardship there." The men replied, "Oh, no, we don't wish to be sent to a man of war, as we are nearly all deserters from the king's service, but we wish for our discharge to go on shore." This the american captain refused, saying, "If you are Englishmen, you shall be sent to an english man of war." They added: "Rather than be punished for our desertion, we will remain where we are." They consequently all took the oath of allégiance to America, Arrival of the two american frigates at Boston. Capt. Smith of the Congress and the british seamen of his crew.

1812.
Dec. except five, who, having never been in a british ship of war, departed with some prisoners which the two frigates had made in their cruise. Had those 20 men succeeded in obtaining their discharge, so as to have gone ashore and got to England in the best manner they could, it was understood that nearly 100 more on board the Congress would have immediately followed their example.

Com-

chant
prize. On the 27th of October the Essex sailed from the Delaware; and on the 30th the Constitution and Hornet sailed from Boston. Towards the latter end of December commodore Bainbridge arrived off St.-Salvador; and, not finding the Essex at the rendezvous, sent the Hornet into the port to make inquiries respecting her. On the 29th of December, at 2 p. m., latitude 13° 6' south, longitude 30° west, while lying to about 10 leagues off the coast, waiting to be joined by the Hornet, then seen approaching from the coast, the Constitution descried in the offing the british 38-gun frigate Java, captain Henry Lambert, having in tow the american merchant ship William, which she had recently captured.

Inef-
fective
way in
which
the
Java
had
been
man-
aged. A little of the previous history of the Java may render more intelligible the details that are to follow. On the 17th of August, in the present year, the late french frigate Renommée,* under the name of Java, was commissioned at Portsmouth by captain Lambert, in order to carry out to Bombay the newly appointed governor, lieutenant-general Hislop, and

* See p. 37.

suite, together with a supply of stores, particularly ^{1812.} of copper, for the Cornwallis 74, and Chameleon and Icarus 10-gun sloops, building at Bombay. There was no difficulty in commissioning the ship, in calking her sides and decks, in fitting up her accommodations, in putting on board her 48 guns, or her stores for the voyage, or for the new ships building; but there was a difficulty in providing her with a crew. Officers, and a few petty-officers, were soon obtained. The ship's 50 marines also came on board; and, although 18 of the number were raw recruits, they were upon the whole a good set of men. Then came about 60 Irishmen, who had never smelt salt water, except in crossing from their own shores to England. As a fine addition to a crew that, in less than a month after the ship sailed, might have to fight an american frigate similar to that which had taken the Guerrière, a draught of 50 disaffected wretches came on board from the 18-gun ship-sloop Coquette, lying at Spithead. Pressgangs and the prison-ships furnished others not much better. As to boys, the established number, 23, was easily filled up; and, at length, 292, out of a complement of 300, men and boys were got together.

Feeling as every brave officer must feel, captain Lambert remonstrated about the inefficiency of his ship's company; but he was told that a voyage to the East Indies and back would make a good crew. It was in vain to urge the matter further; and, as some slight amendment to the Java's crew, eight seamen were allowed to volunteer from the Rodney 74. Thus, out of a complement of 300 men and boys, the whole number of petty-officers and men, exclusively of those of the former that walked the quarterdeck, who had ever been present in an action, amounted to fewer than 50. Here was a ship's company! As several officers and men were to come on board as passengers, some hopes were entertained that these might compensate for the worthlessness of the crew; but, of the 86 supernumeraries, a very large proportion turned out to be marine-society boys.

prize.Crew
of Java
take
their
first
lesson
at the
guns.

Manned in this way, with a total of 397 persons of every description, the Java, on the 12th of November, set sail from Spithead, having in charge two outward-bound indiamen. On the 12th of December the Java captured the american ship William, and placed on board a master's mate and 19 men, (the latter of some experience, undoubtedly, or they would have been of no use there,) with orders to keep company. On the 24th, being rather short of water, and being unable, without much difficulty, to get at what remained in the hold, on account of some articles of stores that laid over the casks, captain Lambert determined to put into St. Salvador. With this object in view, the Java altered her course; but the two Bombay ships, not wishing to go so far out of their way, parted company, and proceeded alone on their voyage.

Hitherto, owing to the necessity, in a newly fitted ship, of setting up the rigging, to the length of time, that a crew so inexperienced as the Java's would expend in the operation, to the number of other extra duties required on board a fighting ship so loaded and lumbered as the Java, and, particularly, to a succession of gales of wind since the day of departure, the men had only been exercised occasionally at training the guns. But, as the ship was now approaching a coast, where there was a probability of falling in with an enemy's frigate, french or american, captain Lambert, on the 28th, ordered the crew to be exercised at firing the guns. Accordingly, for the first time since she had become a british frigate, the Java, on that evening, discharged six broadsides of blank cartridges. With the majority of the crew, of course, those six broadsides were the first they had ever assisted in firing. What a crew to go into action, not with an american frigate a third superior, but with a french frigate barely their equal! Previously to his departure from Portsmouth, captain Lambert had actually declared to some of his friends, that, owing solely to the ineffective state of his crew, he did not

consider himself equal to any french frigate he might meet. 1812.
Dec.

... Having no private brass guns, like the Macedonian, and no pair of long 18-pounders forward to bring down her head like the Guerrière, the Java mounted no more, including 16 carronades, 32-pounders, and two long nines, than her 46 guns and a boat-carronade. Since her action with the Guerrière, either because the ship was beginning to hog, or for some unexplained reason, the Constitution had disarmed herself of two of her 32-pounder carronades, and taken on board one 18-pounder carronade fitted on a travelling carriage; and for which, as has already been shown, she had more than one pair of spare ports. Guns of the two frigates

... Casting off the William, with directions to her to proceed to St.-Salvador, the Java, soon after 8 A. M., with the wind blowing moderately from the north-east, bore up in chase of the Constitution, then in the south-south-west, standing on the larboard tack. At 10 A. M. the Java made the private signals, english, spanish, and portuguese, in succession; none of which were answered. At 10 h. 45 m. the Constitution tacked to the northward and westward, and stood for the Java; whom captain Bainbridge took for his expected consort, the Essex. At noon, when about four miles distant, the Constitution hoisted the private signal. Having kept it flying 10 minutes, and finding it not answered, the Constitution wore from the Java, as the american account states, to avoid being raked; and, again setting her mainsail and royals, kept away about two points free, in order, as commodore Bainbridge says, to draw the Java from her consort, the William merchantman, then standing in for the land, and supposed probably to be another ship of war. Java casts off the William and chases the Constitution.

Each frigate hoists her colours and prepares for the combat

Hauling up, the Java steered a course, parallel to that of the Constitution, and gained upon her considerably; but, the breeze freshening, the Java, who was then going 10 knots, lay over so much, that she was obliged to

1812. take in her royals. At about 1 h. 30 m. P.M. the Consti-
 {Dec. tution, who found no inconvenience from carrying her
 royals, hoisted a commodore's pendant at the main, one
 american ensign at the mizen peak and another at the
 main topgallantmast-head, also an american jack at the
 fore. At 1 h. 40 m., by which time the Java had
 closed her within two miles, the american frigate
 shortened sail to top and topgallant sails, jib, and
 spanker, and luffed up to the wind. The british fri-
 gate now hoisted her colours, consisting of an ensign
 at the mizen peak, one union jack at the mizen top-
 gallantmast-head, and another lashed to the main
 rigging; and, putting herself under top and top-
 gallant sails, jib, and spanker, the Java stood for
 the Constitution, then bearing about three points on
 her lee bow.

Consti-
 tution
 opens
 her fire,
 and
 action
 com-
 mences

At 2 h. 10 m. P.M., when by her lasking course
 the Java had approached within half a mile of the
 Constitution, the latter opened a fire from her lar-
 board guns; the shot from which, as a proof of their
 good direction, splashed the water against the Java's
 starboard side. Not being so close as he wished,
 captain Lambert stood on until within pistol-shot on
 the Constitution's weather or larboard bow; when, at
 2 h. 20 m. P.M., having received a second broadside,
 which, because the guns were now elevated too
 much, as before they had been too little, passed over
 her, the Java discharged a broadside in return.
 Almost every shot of this broadside took effect.
 The Constitution had her wheel knocked away,
 besides receiving other damage, and lost four men
 killed and several wounded.

Consti-
 tution
 wears
 from
 the
 Java's
 fire.

Dreading a repetition of this warm salute, the
 american frigate, having fired her third broadside
 without much effect, wore in the smoke to get fur-
 ther to-leeward. As soon as she discovered that
 her wary antagonist was running before the wind,
 the Java made sail after her; and at 2 h. 25 m.
 P.M.,* the Constitution, and then the Java, having

* See diagram at p. 192.

come round on the starboard tack, the two frigates again exchanged broadsides. Again the Constitution wore to get away. The Java wore also; and at 2 h. 35 m., passing slowly under the latter's stern, with her larboard main yard-arm over the Constitution's taffrail, which, owing to the height of her lower battery from the water and her being nearly eight feet between decks, was nearly as high as that of the 74-gun ship Plantagenet,* the british frigate might have raked the american frigate in a most destructive manner.† But, either panic-struck at the sight of so large and formidable a ship, or unable, from sheer ignorance, to appreciate the value of the opportunity thus afforded them of reducing the strength of their antagonist, the Java's crew did not fire a gun, except the 9-pounder on the fore-castle; and that was pointed and discharged by lieutenant James Saunders, one of the supernumerary officers. The Constitution had now the weather-gage; but this did not suit her long-shot tactics: the american frigate therefore made sail free on the larboard tack, followed by the british frigate; who, at 2 h. 40 m., luffing up, crossed again, but in an oblique manner, the Constitution's stern, and fired, this time, two or three of her foremost starboard guns.

less-
ness of
the
Java's
crew.

At 2 h. 43 m. P. M., feeling ashamed of thus avoid- ing an antagonist so much inferior in size and force to himself, or impelled by his officers, some of whom, perhaps, hinted at the powerless state of the Java's battery, as recently witnessed, commodore Bainbridge, as he tells us in his journal, "determined to close with the enemy notwithstanding his raking." The Constitution accordingly hauled on board her fore and main tacks, and luffed up for her opponent: On arriving abreast of the Java, who had stood on upon the larboard tack, and now lay close to-windward, the Constitution shortened sail and engaged her. At

* Built, as well as the Courageux, without a poop.

† See diagram.

1812. 2 h. 52 m. P. M., having shot away the head of the
 Dec. Java's bowsprit,* the american frigate repeated her
 favourite manœuvre; and, wearing in the smoke,
 was not perceived until nearly round on the star-
 board tack. Having now neither jib nor foretopmast
 staysail, the Java, as the quickest mode to get round
 in pursuit, hove in stays, hoping to do so in time to
 avoid being raked; but, from the operation of the
 same cause that had brought her so readily to the
 wind, the want of head-sail, the ship paid off very
 slowly. At 2 h. 55 m.,† luffing sharp up, the
 Constitution set the Java's men a good example,
 by discharging, within the distance of about 400
 yards, a heavy, but, as it happened, not a very
 destructive, fire into the british frigate's stern. This
 salute the Java, as she fell off, returned with her
 larboard guns. Immediately on receiving their fire,
 the Constitution wore round on the larboard tack,
 and was followed by the Java; who, as quickly as
 she could, ranged up alongside to-windward, as yet,
 not much the worse for her 40 minutes' engagement
 with an antagonist, that ought, in the time, to have
 knocked her to shatters.

The two engage broad-side to broad-side. At 2 h. 58 m. P. M., being again abreast of each other, and within pistol-shot distance, the two frigates mutually engaged: so much, however, to the disadvantage of the Java, that, in the course of 10 minutes, her rigging was cut to pieces, and her fore and main masts badly wounded, her master carried below wounded, and several other officers and men killed or wounded. In this state, captain Lambert determined on boarding, as the only chance of success left. With such intent, the Java, at 3 h. 8 m. P. M., bore up, and would have laid the Constitution on board at her larboard main chains, had not the foremast at that instant fallen; and which, by its

Java foiled in attempt to board.

* The american account says the jib-boom had just before got foul of the Constitution's mizen rigging, but this fact does not appear in the english account.

† See diagram.

weight and the direction of its fall, crushed the fore-castle, and encumbered the principal part of the maindeck. The remains of the Java's bowsprit, passing over the Constitution's stern, caught in her starboard mizen rigging, and brought the ship up in the wind, whereby the opportunity to rake, as well as to board, was lost.

The Java now lay at the mercy of her antagonist; who, at 3 h. 15 m. P. M.,* wearing across her bows, raked her with a very heavy fire, and shot away her main topmast; the wreck of which and of the fore-mast rendered useless the greater part of the starboard guns. Running past her unmanageable, and now nearly defenceless, opponent to-leeward, the Constitution, at 3 h. 20 m. P. M., luffed up and raked her on the starboard quarter; then wore round on the larboard tack, and, resuming her position, fired her larboard broadside with most destructive effect. At 3 h. 30 m. P. M.† captain Lambert fell, mortally wounded in the left breast by a musket-ball from the Constitution's main top, and was carried below. The command of the Java then devolved upon lieutenant Henry Ducie Chads; who, although he had been painfully, but not dangerously, wounded since the commencement of the action, still remained on deck, animating the surviving officers and crew by his noble example.

At 3 h. 50 m. P. M. the Java had her gaff and spanker-boom shot away, and at 4 h. 5 m. her mizenmast. All this while, the Constitution lay on the Java's starboard quarter, pouring in a tremendous fire of round, grape, and musketry. The Constitution, from the damaged state of her rigging, ranging ahead, and the Java, from the fall of her mizenmast, falling off a little, the two frigates again became opposed broadside to broadside. Whether inspired by the intrepid conduct of the Rodney's eight seamen and a few others, (who almost fought the main

1812. deck,) or recovered from their panic by knowing
 Dec. that the chief of the slaughter had hitherto fallen
 among their comrades on the deck above, the men
 at the Java's 18-pounders began blazing away with
 the utmost animation; blazing, indeed, for, the
 wreck lying over the guns on that side, almost every
 discharge set the ship on fire. Having effectually
 Consti- done her work, the Constitution, at 4 h. 25 m. p. m.,*
 tution makes sail out of gun-shot, to repair her
 makes sail out of gun-shot. damages; leaving the Java a perfect wreck, with
 her mainmast only standing, and that tottering, her
 main yard gone in the slings, and the muzzles of
 her guns dipping in the water from the heavy rolling
 of the ship in consequence of her dismasted state.
 Mistaking the cause of the Constitution's running
 from them, or becoming more attached to their new
 occupation by the few hours' practice which they
 had had, the tyro ship's company of the Java
 cheered the american frigate, and called to her to
 come back.

Java's While, with far more care than appeared to be
 crew requisite, considering that the loss of her maintop-
 clear sail yard, with some cut rigging, was the only visible
 wreck. injury she had sustained, the Constitution lay at a
 distance on the Java's weather and larboard bow,
 getting ready to give the finishing blow to this, by
 her means chiefly, protracted contest, the Java, with
 one union jack lashed to the stump of her mizen-
 mast, and another, where, notwithstanding the asser-
 tion of commodore Bainbridge, that it was down
 when he shot ahead, it had remained during all the
 action, in her main rigging, was busied in clearing
 away the wreck of her masts and putting herself in
 a state to renew the action, as soon as her antagonist,
 with whom the option lay, should readvance to the
 attack. The Java's first endeavours were to get
 before the wind: with this view, a sail was set from
 the stump of the foremast to the bowsprit; and, as

* See diagram.

the weather main yard-arm still remained aloft, the main tack was got forward. A topgallantmast was also got from the booms, and begun to be rigged as a jury foremast, with a lower studding-sail for a jury foresail; when, owing to the continued heavy rolling of the ship, the mainmast was obliged to be cut away, to prevent its falling in-board. This was at 4 h. 40 m. P. M.; and in half an hour after that service had been executed, the Constitution wore and stood for the hulk of the Java; whose crew, with very creditable alacrity, had reloaded their guns with round and grape, and seemed, notwithstanding their almost hopeless state, far from dispirited.

1812.
Dec.

Constitution
stands
to-
wards
her.

At 5 h. 45 m. P. M., full three hours and a half from the commencement of the action, the Constitution placed herself in a very effectual raking position, close athwart the bows of her defenceless antagonist. Having, besides the loss of her masts and bowsprit as already mentioned, had six of her quarterdeck, four of her forecastle, and several of her maindeck, guns disabled, the latter chiefly from the wreck lying over them, all her boats shot to pieces, her hull shattered, and one pump shot away, and having also much water in the hold, the british frigate, as a measure that could now no longer be delayed, lowered her colours from the stump of the mizenmast; and at 6 P. M. the Java was taken possession of by the Constitution.

Java
surren-
ders.

The following diagram is meant to illustrate the numerous evolutions in this action, from 15 minutes after its commencement at 2 h. 10 m., to the Java's surrender at 5 h. 45 m. P. M. Some of the dates will be found slightly to disagree with those specified either in the british or the american official accounts. This has been done to bring the two accounts nearer together, but great care has been taken in marking the relative time, which is by far the more material consideration. The remarks formerly made respecting the impracticability of giving the proper elongation to the tracks, or dotted lines, apply to this

Dia-
gram
of the
action.

1912. diagram, to the second or lower compartment of it
Dec. especially.

Loss on
board
Java.

Out of her crew, supernumeraries included, of 354 men and 23 boys, the Java had three master's mates, (Charles Jones, Thomas Hammond, and William Gascoigne,) two midshipmen, (William Salmon and Edward Keele,) one supernumerary clerk, (Thomas Joseph Matthias,) 12 seamen, and four marines killed, her captain, (mortally,) first lieutenant, (already named,) master, (Batty Robinson,) second lieutenant of marines, (David Davies,) boatswain, (James Humble, severely,) four of her midshipmen, 55

seamen, (one mortally,) four boys and 21 marines (with the killed, just half the number on board) wounded; and, of her supernumeraries, one commander, (John Marshall,) one lieutenant, (James Saunders,) captain Wood, aide-de-camp to general Hislop, one master's mate, (William Brown,) and nine seamen also wounded: total, 22 killed and 102 wounded; two mortally, five dangerously, 52 severely, and 43 slightly.

1812.
Dec.

The midshipman Keele was not killed outright, but died the day following. He was only thirteen years of age, and it was the first time he had ever been at sea. He had his leg amputated, and anxiously inquired, soon after the action was over, if the ship had struck. Seeing a ship's colour spread over him, the gallant youth grew uneasy, until he was convinced it was an english flag. The following is the account, which Mr. Humble, the boatswain, gave of himself at the court-martial: "I was down about an hour, when I got my arm put a little to rights by a tourniquet being put on it—nothing else; my hand was carried away, and my arm wounded about the elbow. I put my arm into the bosom of my shirt, and went up again, when I saw the enemy ahead of us, repairing his damages. I had my orders from lieutenant Chads, before the action began, to cheer up the boarders with my pipe, that they might make a clean spring in boarding."

Anecdote of a midshipman, also of the boatswain.

The Constitution received several shot in her hull, and also in her masts, particularly her fore and mizen masts; but these, the mainmast especially, were far too stout even to require fishing in consequence. Out of her eight boats, it is acknowledged that the ship, when the action ended, had only one left in a state to take the water; a tolerable proof that her damages were by no means so trifling as was afterwards represented by the Americans. From the same cause, the loss on board the Constitution, although stated by commodore Bainbridge at only nine killed and 25 wounded, must have been quite as much as

Damage and loss on board Constitution.

1812. the british official account makes it: 10 men killed,
 Dec. her fifth lieutenant, Mr. John C. Aylwin, (the same who was wounded as master in the *Guerrière's* action,) and four men mortally wounded, the commodore wounded slightly, and about 42 others, most of them severely. Having none of her men absent in prizes, the *Constitution* had on board her full complement, besides two or three supernumeraries; making 477 men and three (as we shall say, although one only, a lad of 17, was seen) boys. By adding about 100 men to the *Guerrière's* crew, the "Comparative force" in her action will suffice to refer to on the present occasion.*

Re- marks on the action. The *Constitution* captured the *Java* certainly, but in so discreditable a manner, that, had the latter been manned with a well-trained crew of 320 men, no doubt remains in our mind, and we have considered the subject seriously, that, notwithstanding her vast superiority of force, the american frigate must either have succumbed or have fled. Indeed, if american report be worth attending to, captain Bainbridge, once during the heat of the action, had an idea of resorting to the latter alternative; but his first lieutenant, Mr. Parker, (a native of Great Britain, we have been informed,†) succeeded in dissuading him from the measure.

Disap- point- ment of the Americans on board- ing the Java. If, on coming on board the *Constitution*, the surviving british officers were surprised at the immense force, both in matériel and personnel, to which they had so long been opposed, the american officers, on boarding the *Java*, were mortified at seeing the little screwed-up ship, (her sides tumbled in so, that she appeared, at the gangways, scarcely wider than the *Hornet*,) which had given them so much trouble to take. The thing, however, was done; and it only remained, by arts which none know better than Americans how to practise, to swell the victory into

* See p. 150.

† His name does not appear in the "Register" of 1816.

one of the grandest triumphs that any nation, except ^{1812.} America, had hitherto gained.

Lieutenant Parker, the prize-master of the Java, ^{Dec.} having reported to the commodore her disabled ^{Java is set on fire by her captors} condition, received orders, as soon as he had removed the prisoners and their baggage, to set the ship on fire. This tedious service, with only one boat to perform it, being at length accomplished, the Java, on the forenoon of the 31st, was set on fire; and the Constitution retired to a distance to avoid the effects of the explosion. Now occurred a curious scene on board the Constitution. The Java was burning without the customary emblem of her newly-acquired national character. Not finding, as he had expected, an american flag among the Java's signals, and deeming it unnecessary, owing to the present distance between the ships, to send for one, lieutenant Parker left the Java burning without any colours at all. Scarcely had commodore Bainbridge recovered from the rage into which this, in point of national etiquette, very serious event had thrown him, than one of the two or three deserters, that had already entered on board the Constitution, informed him, that the Java had an immense quantity of specie in her hold. After a while some of the late officers of the Java, pitying the acuteness of his feelings, assured the american captain, that the cases contained neither gold nor silver, but copper.

At about 3 p. m. the Java exploded; and that evening the Constitution, having quite refitted herself, ^{Blows up and Constitution sails for St.-Salvador.} made sail for St.-Salvador. Although entirely dismasted, the Java was not in such a damaged state in the lower part of her hull, but that the crew of a british frigate would have refitted her sufficiently for the voyage to America. But why did not commodore Bainbridge take her with him into that port? He carried thither, as a prize, the english schooner Eleanor; and the Hornet went in there with her recapture, the William. There is a mystery about the destruction of the Java, which we cannot pene-

1812. trate. Shortly after the Constitution had made sail
 Dec. from the scene of her exploit, her consort, the Hornet,
 hove in sight. Another british frigate to a certainty!
 Here was a scene of bustle and confusion. The
 swearing and blustering of the officers, and the free-
 and-easy nonchalance of the men, almost made the
 british officers smile notwithstanding their recent
 misfortunes. At length the Hornet approached near
 enough to be recognised, and some degree of order
 was restored.

Shame- The manner in which the Java's men were treated
 ful by the american officers reflects upon the latter the
 treat- highest disgrace. The moment the prisoners were
 ment of brought on board the Constitution, they were hand-
 Java's cuffed. Admitting that to have been justifiable as a
 men. measure of precaution, what right had the poor
 fellows to be pillaged of almost every thing they
 possessed? True, lieutenant-general Hislop got
 back his valuable service of plate, and the other
 british officers were treated civilly. Who would
 not rather that the governor's plate, at this very
 time, was spread out upon commodore Bainbridge's
 sideboard, than that british seamen, fighting bravely
 in their country's cause, should be put in fetters, and
 robbed of their little all? What is all this mighty
 generosity but a political juggle, a tub thrown to
 the whale? Mr. Madison says to his officers,
 "Never mind making a display of your generosity,
 where you know it will be proclaimed to the
 world. If you lose any thing by it, I'll take care
 congress shall recompense you twofold. Such con-
 duct, on the part of an american officer of rank, will
 greatly tend to discredit the british statements as
 to any other acts of yours not so proper to be made
 public, and will serve, besides, as an imperishable
 record of the national magnanimity and honour."
 One object the Constitution's officers missed by their
 cruelty. Three only of the Java's men would enter
 with them: the remainder treated with contempt
 their reiterated promises of high pay, rich land, and

liberty. Partly as a compliment for restoring his plate, and partly to induce commodore Bainbridge not to put into effect his threatened intention of retaining lieutenant Chads as a hostage for the due observance of the terms on which the other officers and men were about to be paroled, lieutenant-general Hislop presented the former with an elegant sword.

On the 3d of January, in the morning, the Constitution and Hornet arrived at St.-Salvador; where lay the William, recaptured by the latter. On that same day the commodore disembarked the prisoners received out of the Java, 355 in number, and captain Lawrence landed the 20 officers and men whom he had found on board the William; making a total, out of the original crew of the Java, of 375, or, with the 22 killed, of 397, men and boys. The death of captain Lambert and of one seaman, and the delivery up, to the governor of St.-Salvador, of nine portuguese seamen, reduced the number of prisoners out of the two prizes to 364. But the number paroled by commodore Bainbridge is officially reported by himself at 361. How is this? Why the commodore states, that he allowed "three passengers, private characters, to land without any restraint." But who were these "three passengers, private characters," so generously exempted from parole? No others, it would seem, than the three sailors of the Java, who had been fools enough to enter the american service. To deduct them from the amount of prisoners received, would be making the Java's complement appear three men short of what, by a proper arrangement of the figures, it could be proved to have been. To confess the fact, would never do. Therefore, the whole of the Java's passengers, naval, military, and civil, were paroled as "officers, petty officers, seamen, marines and boys," and the hiatus made by the three traitors was cleverly filled up by three nominal "passengers, private characters, whom the commodore did not consider prisoners of war, and permitted to land without any restraint;" and of whom, of course, no further

ers.

1812. account was taken. So that, as commodore Bain-
 bridge officially declared, that the Java "certainly"
 Jan. had 60 killed; and, as he took no notice whatever of
 the recaptured ship William, his 361 paroled and 12
 unparoled prisoners showed, in the clearest manner,
 that the Java, when the action commenced, had 433
 men. But the commodore merely gives his prize "up-
 wards of 400 men." What greater proof, then, can
 there be, of captain Bainbridge's modesty, as well as
 of his scrupulous regard not to overstep the bounds
 of truth?

Death
 and
 burial
 of capt.
 Lam-
 bert.

On the 4th the young and gallant captain Lambert
 breathed his last, and on the 5th was buried with
 military honours in Fort St.-Pedro, attended by the
 governor of St.-Salvador, the condé Dos Arcas,
 and the Portuguese in general, but not (will it be
 believed?) by either commodore Bainbridge or
 captain Lawrence, or by any of their respective
 officers. But the commodore afterwards made some
 amends for a piece of disrespect so marked and public,
 by writing the following private note to lieuten-
 ant-general Hislop. "Commodore Bainbridge
 has learned, with real sorrow, the death of captain
 Lambert. Though a political enemy, he could not
 but greatly respect him for the brave defence he
 made with his ship; and commodore Bainbridge
 takes this occasion to observe, in justice to lieu-
 tenant Chads, who fought the Java after captain
 Lambert was wounded, that he did every thing for
 the defence of that ship, that a brave and skilful
 officer could do, and that further resistance would
 have been a wanton effusion of human blood."

Consti-
 tution
 arrives
 at
 Boston

On the 6th, requiring more repairs than she could
 obtain in any foreign port, the Constitution got under
 way from St.-Salvador, and, breaking up her cruise
 to the Pacific, bent her course towards home; leav-
 ing the Hornet to blockade in the port the british
 sloop of war Bonne-Citoyenne. We shall by and
 by set this matter right, confining our attention at
 present to the Constitution; who, without any further
 event of consequence, anchored, on the evening of

the 15th of February, 1813, in the harbour of Boston. ^{1813.}
 The reception given to commodore Bainbridge, his ^{Feb.}
 officers, and crew may readily be conceived; as
 well as the exaggerated accounts that were published
 of his victory. We shall merely state, that the con-
 gress of the United States voted 50000 dollars, and
 their thanks, to the captain, officers and crew of
 the Constitution; also a gold medal to commodore
 Bainbridge, and silver medals to each of his officers,
 with suitable devices.

At this moment our eyes light upon a passage in a <sup>Recep-
tion
given
to com-
modore
Bain-
bridge
by the
citi-
zens.</sup>
 book before us, giving an account of the reception
 of commodore Bainbridge by the citizens of Boston,
 and we cannot resist the temptation of placing it
 before the british public. "On the following
 Thursday, (that succeeding the frigate's arrival,) <sup>Recep-
tion
given
to com-
modore
Bain-
bridge
by the
citi-
zens.</sup>
 commodore Bainbridge landed at the long wharf
 from the frigate Constitution, amidst acclamations,
 and roaring of cannon from the shore. All the way
 from the end of the pier to the Exchange coffee-
 house, was decorated with colours and streamers. In
 State-street they were strung across from the
 opposite buildings, while the windows and balconies
 of the houses were filled with ladies, and the tops
 of the houses were covered with spectators, and an
 immense crowd filled the streets, so as to render it
 difficult for the military escort to march. The
 commodore was distinguished by his noble figure,
 and his walking uncovered. On his right hand was
 the veteran commodore Rodgers, and on his left
 brigadier-general Welles; then followed the brave
 captain Hull, colonel Blake, and a number of officers
 and citizens; but the crowd was so immense that it
 was difficult to keep the order of procession. The
 band of music in the balcony of the State Bank, and
 the music of the New-England guards, had a fine
 effect."* Here was a compliment to the british
 navy!

* Naval Monument, p. 279.

1812.
Sept.

Lieut.
Chads
and his
officers
arrive
at
Ports-
mouth.
Court-
martial
upon
them.

The surviving officers and crew of the *Java*, having quitted the Brazils in two cartels, arrived at Portsmouth early in April; and, on the 23d of the same month a court-martial sat on board the *Gladiator* in the harbour, to try them for the loss of their ship. The court agreed, that the capture of the late *Java* was caused by her being totally dismasted in a very spirited action with the United States' ship *Constitution*, of considerably superior force; in which the zeal, ability, and bravery of the late captain Lambert, her commander, was highly conspicuous and honourable, being constantly the assailant, until the moment of his much-lamented fall; and that, subsequently thereto, the action was continued with equal zeal, ability, and bravery, by lieutenant Henry Ducie Chads, the first lieutenant, and the other surviving officers and ship's company, and other officers and persons who were passengers on board her, until she became a perfect wreck, and the continuance of the action would have been a useless sacrifice of lives; and did adjudge the said lieutenant Henry Ducie Chads, and the other surviving officers and ship's company to be most honourably acquitted. Rear-admiral Graham Moore was the president; and who, in returning lieutenant Chads his sword, addressed him nearly as follows: "I have much satisfaction in returning you your sword; had you been an officer who had served in comparative obscurity all your life, and never before heard of, your conduct on the present occasion has been sufficient to establish your character as a brave, skilful, and attentive officer."

Laura
bears
down
to en-
gage
Dill-
gent.

On the 8th of September, at 3 P.M., the british schooner *Laura*, of 10 carronades, 18-pounders, and two short nines, with 41, out of a complement of 60, men and boys, commanded by lieutenant Charles Newton Hunter, while in the act of taking possession of her fourth prize, an american ship bound into the Delaware, then three leagues off in the north-west, discovered about three miles to-leeward a large

armed brig, with a french ensign and pendant. This ^{1812.} was the french privateer Diligent, captain Grassin, ^{Sept.} whose regular armament was 16 carronades, french 24-pounders, and two long 12-pounders, with a crew of at least 120 men; but, owing to a recent gale, three of the guns had been shifted to the hold, and, from manning a prize or two, the crew of the brig had been reduced to 97 men. Having recalled her boat and men from the american ship, the Laura, with the wind from the north-east, bore up for the Diligent, whose name and full force in guns and men had been communicated to lieutenant Hunter by the third prize he had sent away.

At 3 h. 55 m. P. M., being within musket-shot on the starboard and weather quarter of the Diligent, the Laura opened a fire from her bow guns, and received the broadside of the french brig. At 4 P. M. the two vessels got fairly alongside each other; and, while the Diligent manœuvred occasionally to gain the wind, the Laura tried to prevent it by lulling, as well as she was able, her opponent's sails. At 4 h. 30 m. P. M. the Diligent set her courses and tried to tack, and the Laura put her helm down to effect the same object; but, the wind falling light, both vessels missed stays, and, in paying off, became mutually engaged yard-arm and yard-arm. At 4 h. 45 m., having had her peak-halliards shot away, the Laura fell a little off the wind and fore-reached; and the Diligent grazed the schooner's larboard quarter. Shortly afterwards, dropping astern, the brig caught the breeze, and, having the superiority of sailing, drew up on the weather quarter of the Laura. At this time, owing to the low firing of the two vessels, neither had materially suffered in rigging or sails. The Diligent, now in her turn, took the wind out of the Laura's sails, and ran her bowsprit over the starboard taffrail, with her jib-boom between the topping-lifts and through the mainsail. Here the brig held fast.

Opens
her fire
upon
the
latter.

Dili-
gent
lays
Laura
on
board.

1812. The Diligent now, under the fire of her two bow
 } guns and her numerous musketry, made repeated
 Sept. attempts to board; but the Laura, although, from
 having 25 american prisoners to guard below, she
 could muster no more than 34 officers and men
 on deck, resisted every attempt. At 4 h. 55 m.
 lieutenant Hunter, after having been several times
 slightly grazed, received a musket-ball near the
 left ear, which, passing obliquely down the lower
 part of the back of the head, made its way out. He
 of course fell, and from excess of bleeding was
 incapable of further efforts. Unfortunately no officer
 was left to take the command, the principal officers
 being absent in the three prizes, and Mr. John C.
 Griffith, a young midshipman who had been but a
 short time at sea, having been previously wounded.
 In this situation, there was no possibility of opposing
 further resistance to the overwhelming crew of the
 Diligent; who accordingly rushed on board and
 hauled down the Laura's colours.

Lieut.
 Hunter
 is se-
 verely
 wound-
 ed and
 Laura
 surren-
 ders.

Loss on The Laura had 15 killed and severely wounded,
 board including, as already stated, her commander and his
 each only remaining officer. The Diligent, as acknowleged
 vessel. by captain Grassin, had nine killed and 10 badly
 wounded; a decided proof that the Laura's small
 crew had made the best possible use of their 18-
 pounder carronades. Captain Grassin carried his
 prize to Philadelphia, and behaved to lieutenant
 Hunter in the most honourable and attentive man-
 ner. Lieutenant Hunter was landed and taken to
 the hospital; and, on subsequently reaching Halifax,
 Nova-Scotia, was tried for the loss of the Laura
 and most honourably acquitted. The president,
 vice-admiral Sawyer, then returned lieutenant Hunter
 his sword with a very handsome eulogium.

BRITISH AND AMERICAN NAVIES.

In the abstract of the british navy for this year 1813. will be found, among the "Ordered to be built" ships, four first-rates. Two of these were similar to the Caledonia and Nelson; the Britannia, building at Plymouth, and the Prince Regent, at Chatham. The other two were of rather a smaller class; the London, building at Plymouth, and the Princess-Charlotte at Portsmouth.* To the fine class of N or middling 74s, as many as 11 new individuals have been added. By the addition of these and of other large ships, and by the gradual reduction of the O or small-class 74, and of the 64, although the number of cruising line-of-battle ships is three less than are to be found in Nos. 9 and 16 Abstracts, the tonnage of the 124 in No. 21 Abstract exceeds that of the 127 in No. 9 by 8564, and in No. 16 by 5585, tons. This makes the average burden of the 124 line-of-battle ships, belonging to the british navy at the commencement of the present year, 1830 tons and a fraction; whereas the average, at the commencement of the year 1802, was 1740, and, at the commencement of 1793, only 1645 tons;† an unequivocal testimony of the improved state of the british navy.‡

On the 26th of January in this year a small increase took place in the complements of the different classes of frigates; occasioned, in all probability, by the war with America. As far back as October and December, 1804, the large class of 38s had been ordered to have their complements augmented from 284 to 300 men and boys; but on the 24th of June, 1806, the order was rescinded, and the 38s were again

* See Appendix, Annual Abstract No. 21.

† See vol. ii. p. 619.

‡ See Appendix, Nos. 4 and 5.

1813. established with 284, and the 18-pounder 36s with 274, men and boys. Subsequently, by special orders, most of the large 38s obtained a complement of 300; and the order of January, 1813, gave to the whole class 320, including five additional marines; also to the 18-pounder 36s 284, and to the 18-pounder 32s 270, men and boys. The 24-pounder 40-gun class, including the new ships building, were also increased from 340 to 350 men and boys; and the 18-gun quarterdecked ship-sloops, from 121 to 135. Still, the boys were in far too great a proportion in all the classes. In action they are of no use, because of their physical incompetency; and out of action their services are not required, on account of the number of abler hands ready to do the work. Boys would, doubtless, learn more of practical navigation, and become, in the end, better seamen, by passing their teens in a merchant vessel; for this plain reason, that, instead of spending their time in comparative idleness, they would be employed in assisting the few hands on board to perform the duties of the ship.

Over-
plus of
boys in
british
com-
ple-
ments.

A glance at the "Increase" compartment of this and the preceding year's Abstract will show, at once, what a stir the recent successes of the Americans were making in the english dock-yards. In our view of the case, nearly the whole of that stir, with the heavy expense consequent upon it, was unnecessary. Paradoxical as it may seem, we boldly make the assertion, that the way to strengthen the british navy was to break up, not to build, ships. The matériel and personnel were more than ever out of their due proportions. The mode, that should have been adopted, was to break up, lay up, or, at all events, to disarm and put out of commission, 40 or 50 ships; and, after sweeping from the service and lodging in the hospitals or elsewhere, the old, the infirm, and the ineffective, to put on board the remaining ships adequate crews of able-bodied, stout-hearted british seamen. Let these be practised at the guns,

mitted.

and well officered; and then let it be seen what enemy's ship, with a fifth of numerical superiority, could stand against them. Those, however, who possessed the power to direct these matters, acted as if they thought, that an increase of wood and iron would effect more than an increase of flesh and blood; and now let us see whether, proceeding upon that notion, they went the right way to "fashion the means to the end."

But first we will endeavour to show, that the plan of disarming a great many of the higher rates might have been carried into effect, without detriment to the general service of the navy. For this a few facts will suffice. The disaffected and ill manned state of the french fleet in the Scheldt would have admitted of less than half the number of ships that blockaded Flushing, and the almost equally ill manned, though perhaps not disloyal, condition of the french fleet at Toulon was keeping before that port, for the most part as mere lookers-on, 10000 or 12000 of the best seamen in the british navy; three fourths of whom were on board three-deckers, ships that, under existing circumstances, were useless any where but on that station. Allowing, even, that both the Flushing and the Toulon stations required a numerical force of ships outside nearly equal to that within, a dozen or or two of large transports, with a double row of painted ports, would keep the enemy in harbour as effectually as the same number of well-appointed 74s. With respect to the Mediterranean fleet, it was particularly to be regretted that, while there was such a dearth of seamen in the home ports and on the north-american station, so many thousands of the very best of seamen, who, under the wise regulations of sir Edward Pellew, had been daily improving themselves in the neglected art of gunnery, should be denied the power of showing their proficiency where it was so much wanted.

We have already given a very full account, not only of the exploits, but of the force in guns, men,

1813.

tion.

1813. and size, of the american 44-gun frigates; and we will now, as far as lies in our power, point out the steps that were taken by the british admiralty, to put a stop to their further successes. The *Majestic*, *Goliath*, and *Saturn*, three of the small-class 74s, were cut down, fore-and-aft, to the clamps of the quarterdeck and forecastle. Each ship was allowed to retain her first-deck battery of 28 long 32-pounders, and, in lieu of her 28 long 18-pounders on the second deck, she received an equal number of 42-pounder carronades, besides two long 12-pounders as chase-guns, making 58 guns on two flush decks, with a net complement of 495 men and boys. This, although a reduction in her numerical force of 22 guns, (16 on the quarterdeck and forecastle and six on the poop,) gave the ship, even if armed with the full establishment of long guns and carronades assigned to her class, a slightly increased weight of metal in broadside. The advantages contemplated from this alteration in the construction were, superiority in sailing, an equal degree of force, and, with the aid of a black hammock-cloth thrown over the waist-barricade, such a disguised appearance, as might induce the large american frigates to come down and engage. The three 64s reduced in the year 1794* were converted into real frigates; inasmuch as, excepting the portion of barricade that lay abaft the gangway-entrance, they were cut down level with the upper deck, and were armed precisely as any frigate of similar dimensions would have been. But these *rasé* 74s were no more frigates, although frequently so called, than the nine 56 and 54 gun ships purchased into the service in 1795.† The latter, although much smaller and more lightly armed than the *rasés*, were never considered as any other than two-decked ships. It is but justice to captain William Layman, of the navy, to state, that, in a pamphlet entitled “Precursor to an Exposé on Forest Trees and Timber, &c.” pub-

lished in January, 1813, he recommends the small-^{1813.} class 74 to be cut down, precisely as the Majestic and her two companions were; and, among his six profile views of ships, that officer gives one of the 74 rasés, in illustration of his remarks. The only point wherein he appears to differ is, in arming the lower deck with long 24 instead of 32 pounders, and the upper, with 68 instead of 42 pounder carronades.

It is evident, from the description we have given ^{Too heavy to cope with the ameri- can 74s.} of the cut-down 74, that she was much more than a match for the heaviest of the american 44s. The command of the Majestic was given to captain John Hayes, and that of the Goliath to captain Frederick Lewis Maitland. It was intended, we believe, that captain lord Cochrane should have commanded the Saturn; but, unfortunately for himself and his country, his lordship was about this time expelled from the service of which he had hitherto been so bright an ornament. The command of the Saturn, after some delay in consequence of this untoward event, was given to captain James Nash. These three ships were well manned, especially the Majestic and Saturn. The crew of the latter consisted chiefly of west-country volunteers, induced to enter from a belief that lord Cochrane was to be their captain; and we are convinced that, if the Majestic and Saturn had fallen in with the President, Constitution, and United-States sailing in company, captain Hayes would have attacked them, and, we think, with success. As, however, no glory could have accrued from the capture of an american 44-gun frigate by a british cut-down 74, supposing them to have been singly opposed, the utility of reducing the Majestic and her two companions from their former rank in the service has often been questioned.

But some ships were built, to answer the same ^{Lean- der and New- castle.} purpose as the three rasés. They, also, claim a few remarks. The Leander was constructed of pitch-pine, from a draught prepared by sir William Rule, the ingenious architect of the Caledonia and many other

1813. fine ships in the british navy; and the Newcastle was constructed of the same light wood, from the draught of M. Louis-Charles Barrallier, then an assistant surveyor under sir William, but now the principal naval architect for the French at Toulon. The first of these ships measured 1572, the other 1556 tons; and they were both constructed of very thin and inadequate scantling. The establishment of each ship was 30 long 24-pounders on the first or "upper" deck, and 26 carronades, 42-pounders, and two, afterwards increased to four, long 24-pounders on the second or "spar" deck; total, at first 58, then 60 guns, with a net complement of 480 men and boys. The Leander and Newcastle, therefore, in the disposition of their guns, perfectly agreed with the cut-down 74s; and yet they were officially registered as "frigates," but, by way of salvo for their anomalous structure, "with spar decks," was superadded. If, by "frigate," is meant a ship with a single battery-deck from stem to stern, is it not a sufficient stretch of the term, to apply it to a vessel that has two additional short decks, upon which are mounted nearly as many guns as she carries on her whole deck? But must a ship, having two whole decks, upon each of which an equal number of guns is mounted, be called a single-decked vessel? And yet, in official language, the Leander and Newcastle are not two-decked ships, otherwise their lower battery-deck would not be called their upper deck, nor their upper, their spar deck; neither would their depth of hold be measured from the deck below the first battery-deck, nor the length of the same deck be registered as the "length of gun-deck." These are the only points, in which these frigates with spar decks differ from the cut-down 74s, and from the 56 and 54 gun ships already mentioned.

Impro-
perly
called
fri-
gates.

Bad
state of
equip-
ment of
Leander.

The command of the Leander was given to captain sir George Ralph Collier, a name of frequent occurrence in these pages; and the command of the Newcastle, to captain lord George Stuart. Great difficulty was experienced in getting these two ships

manned; and certainly the crew of the *Leander*,^{1813.} after it was obtained, was a very indifferent one, containing, besides many old and weakly men, an unusually large proportion of boys. This ineffectiveness of the *Leander's* crew has recently been contradicted; but we allude to the period of the ship's arrival at Halifax, Nova-Scotia. We were then on board the *Leander* several times, and not only witnessed the quality of her crew, but heard the officers complain, as well they might, of their great inferiority in that respect to the ships against which they were expected to succeed. When she quitted Spithead for Halifax, the *Leander* was so lumbered with stores, that the ship would scarcely have made the voyage, had she not received a refit in Cork; and even then it was fortunate, much as was to be expected from her captain and officers, that the *Leander* did not encounter one of the american 44s.

Another ship, of the same force in guns, and nearly so in men, as the *Leander* and *Newcastle*, was produced by raising upon the *Akbar*, formerly a teak-built indiaman, and more recently known as the 44-gun frigate *Cornwallis*. The *Akbar* proved a very indifferent cruiser, sailing heavily, and rolling to such a degree, that she was constantly carrying away or springing her masts. The ship actually stowed 450 tons of water; while the *Caledonia*, a ship of double her measurement, could not stow more than 421 tons. The *Akbar* has since been converted to the only purpose for which, and carrying a cargo, she was ever adapted, a troop-ship.

If it was deemed necessary to build or equip ships to oppose the large american frigates in fair combat, they should have been frigates, not two-decked ships like the *Leander*, *Newcastle*, and *Akbar*. There was a frigate laid down in the year 1813, which would have answered every purpose; but, after the draught of the *Java* had been prepared as that of a regular frigate, to carry 52 guns, the pen of authority filled up the gangway with a barricade and a row of

The

raised
upon.

New
Java,
as ori-
ginally
and as
finally
con-
struct-
ed.

1813. ports, and hence the Java was built as a 60-gun two-decked ship, similar to the Newcastle and Leander. If the american frigates, of 1533 tons, could not carry, with ease, their gangway guns, and the two last-named british 60-gun ships, averaging 1564 tons, found some inconvenience in carrying theirs, how could it be expected that the Java, of 1458 tons, could bear the eight additional guns ordered for her?

Mode
sub-
mitted
for
arming
frigates

Even as a frigate mounting 50 guns, the Java might have been as effectively armed as if she had mounted 52, simply by carrying, like the Constitution,* one of her chase 24-pounders on the forecastle, and the other on the quarterdeck. No ship, no british ship at all events, is so well manned as to be able, if attacked by two opponents, to fight all her guns at once: hence, there is no real loss of force in subtracting the two guns. Nor would there be any difficulty, that a little practice could not soon overcome, in shifting the travelling gun, during an action, from one side of the deck to the other. The governing principle should be, to possess the greatest real, with the least numerical, force; and this is chiefly attainable by the power to present in broadside a greater proportion than half the number of guns mounted by the ship.

Advantage of making each deck an entire battery from end to end.

Our objection to the cut-down 74s and the two-decked 50s, the latter especially, is to their denomination as frigates, and not to the manner in which their guns are mounted. Admitting that, in former times, when british, like french ships, fell in so at their topsides, that, after the boats and booms were stowed in the waist, a mere gangway, or passage from the quarterdeck to the forecastle, was all the space which could be spared on each side, now that british ships are built nearly wall-sided, what is to prevent the gangway, or waist deck from receiving as many guns as its length will admit? These four or five guns, from their midship position,

* See p. 147.

would be the most efficient of any in the tier to which they belonged. Nor, if the light and but equivocally useful carronades on the poop were withdrawn, would the numerical gun-force of the ship be greatly augmented. The addition to her force is not all the advantage the ship would acquire: weight would be taken from the extremity, the weakest extremity, unless the ship has a round stern, and be shifted to the centre, where it can best be borne.

1813.

Any objection to the plan, because of the new nomenclature it would introduce, meets an answer in the present mode of classifying the british navy. A three-decker, certainly, would be called a four-decker, a two-decker, except of the R and U classes in the Abstract, a three-decker, and a quarter-decked one-decker, or regular frigate, a two-decker; but is not the old 98 now called a 104, the old 38 a 46, and, a much greater advance in figures, the old 24 a 34? If England does not adopt the plan, other nations will. America, indeed, has already begun to build flush three-deckers, or ships, in the disposition of their guns, not unlike the swedish Chapman's 94-gun ship mentioned at a former page.* France has already built a few flush two-deckers, similar to the Leander's class; and, if she follows the advice of a very ingenious writer on naval affairs of her own, she will by and by have flush three and flush four decked ships. "We ought, for the future," says M. Dupin, "to construct our line-of-battle ships without a poop, and compensate that reduction by continuing the battery from the forecastle to the quarterdeck. We should then have ships of the line with four, and with three, complete batteries." "Nous devrions à l'avenir ne construire que des vaisseaux sans dunette, et compenser cette suppression, en continuant la batterie des gaillards, depuis l'avant jusqu'à l'arrière. Alors

Objection in the nomenclature obviated.

Plan adopted in America and recommended in France

* See vol. v. p. 17.

1813. nous aurions des vaisseaux à quatre et à trois batteries complètes."*

Incon-
veni-
ence of
waist-
guns;

Our remarks on this subject, as well as those we formerly submitted on the equalization of the calibers of guns,† are merely thrown out as loose hints, to be taken advantage of, if thought worthy, by the abler heads of those to whom the subject professionally belongs. We are aware of one objection to placing guns in the waist: the inconvenience, while those guns are in use especially, of working the sails. It is a rare innovation that produces good without some alloy of evil; and perhaps a clever rigger could dispose the ropes and halliards in such a manner, that the force of that objection would be considerably weakened.

New
40-gun
frigates

Resuming our subject, we have to notice that, besides the two anomalous classes of "frigates," the out-down 74 and the 50, a few ships were constructed, to which the name of frigate properly applied, and which, with a little more care in constructing and equipping them, would have been able to cope with the President or either of her classmates. The *Endymion* is already known to us as a remarkably fine frigate; but she mounted only 26 guns on the main deck. Another pair of guns on that deck were deemed indispensable; and as fine a frigate as ever swam, having the ports for that number of 24-pounders, was then lying among the ordinary in Hamoaze. The *Egyptienne*, of 1430 tons, was this frigate; but, to save expense we suppose, it was determined to build ships from the draught of the *Endymion*, and to bring the 13 maindeck ports as much closer as would admit a 14th to be added. This was done; and in a short time appeared the *Forth*, *Liffey*, *Severn*, *Glasgow*, and *Liverpool*. The three first were built of fir, and the two last of pitch-pine; and the force of the class was 28 long

24-pounders on the main deck, and 20 carronades, ^{1813.} 32-pounders, and two long nines, on the quarterdeck and forecastle; total 50 guns; with a complement of 350 men and boys. The chief complaint against these frigates was, as may be conjectured, that their quarters were rather too confined. A class like the *Egyptienne*, mounting the same number and nature of guns as the *Forth's* class, with a crew of 420 good men, would have been quite as heavy a frigate as the British, with a due regard to their established character on the ocean, ought to have constructed, if they constructed any at all, to meet the large american frigates.

But the rage for frigate-building in this year did not stop at the *Endymion's* class. As many as 26 of the two principal 18-pounder classes were ordered to be built, chiefly, for expedition-sake and to save expense, of the red and yellow pine. Some of these, too, were to be fitted with medium 24-pounders instead of their long 18s, and were to have a complement of 330 men and boys. The six and a half feet, 33 cwt. 24-pounder, or Gover's gun, not having been found heavy enough to fire two shot, some guns of the same caliber were constructed, from a foot to a foot and a half longer, and weighing from 40 to 43 cwt. One description of these guns was found fully to answer; and we shall by and by have more to say of them. As it turned out, no shot fired from a long or a medium 24-pounder, except in the single instance of a british ship which had been in the service since the year 1797, struck or fell on board an american frigate. The promulgated intention, to arm british frigates with such guns, was quite enough to inspire the Americans with caution; and accordingly the *Java* was the last british frigate they captured or brought to action, but not, as we shall hereafter see, the last they fell in with. After all, therefore, it is a question, whether it would not have been sufficient, without cutting down *Majestics* and *Goliaths*, or building *Leanders* and *Newcastles*, to

1813. have made the Macedonian's fine class as effective as it ought to have been; and, as the chief means of doing so, to have given to each 38-gun frigate, sent cruising to the westward, a well-trained crew of 370 men.

American sloop of war. Some of the minor classes of ships of war now claim our attention; and we shall soon have a set of cases to record, which will show that the Americans as much outbuilt the British in their "sloops," as they had outwitted and outfought them in their "frigates."

The two principal classes of sloops of war, at this time belonging to the British navy, were the quarter-decked 18-gun ship-sloop, of about 430 tons, mounting 18 carronades, 32-pounders, on the main deck, and on the quarterdeck and forecastle six carronades, 12 or 18 pounders, and two sixes, total 26 guns, with 121 men and boys; and the well-known 18-gun brig-sloop, mounting no more guns than she rated. As a match for the first class, it was proposed to congress, in November, 1812, to build a few sloops of war to mount 16 long 12-pounders on the main deck, and 12 carronades, 24-pounders, on the quarterdeck and forecastle, total 28 guns; with a complement of 180 men. The size is not mentioned, but a ship, so armed, could not measure less than 560 or

A quarter-decked class proposed.

A flush-decked class preferred.

570 tons. Whether it was decided to vote all the British quarterdecked ship-sloops "small frigates," and consequently superior to any vessels bearing the denomination of "sloops," or whatever else may have been the reason, the American quarterdecked sloop was laid aside, and the preference was given to a flush-decked ship, to mount 20 carronades, 32-pounders, and two long 18-pounders, with a crew of 175 men, and to measure 509 tons American, or 540 tons English. These were to rate of 18 guns, and to be considered as a fair match for the British 18-gun brig-sloop, which, from the concurrent testimony of such men of veracity as Captain David Porter and Captain Jacob Jones,* mounted 22 guns.

* See pp. 129, 163.

Three of the new american sloops were soon ^{1813.} afloat, the Peacock, Wasp, and Frolic; and, to be ready to meet these upon equal terms, 18 flush ships were ordered to be built of fir, with all possible despatch. Having in their possession the Andromeda, (late the american merchant ship Hannibal,) of 24 guns on a flush-deck, an extraordinary fine ship of 812 tons, the late french corvette Bonne-Citoyenne, and the two ships built after her, the Hermes and Myrmidon, the British could be at no loss for a proper model. Well, what did they do? Why, one of the lords of the admiralty recommended a draught to be prepared upon the reduced lines of the Bonne-Citoyenne. To what extent the reduction went, and whether an augmentation of size would not have better answered the intended purpose, will be seen by the following statement.

British sloops built to oppose those of America deficient of every good quality

	Length of main deck.		Breadth extreme.		Tons.	No.	
	ft.	in.	ft.	in.		guns.	men.
Bonne-Citoyenne	120	1	30	11	511	20	135
Proposed draught	115	6	29	8	455	22	135
American Frolic	119	6	32	0	540	22	175

Where so much deference was officially due, science had to bow the head, and sir Joseph Yorke soon had the satisfaction of seeing his "improved Bonne-Citoyennes" afloat and fitting in all the principal dépôts of Great Britain. To diminish a vessel's capacity, and at the same time to increase her armament, was an odd way of improving her qualities. Scarcely were the twenty 32-pounder carronades and two long nines brought on board, than two of the carronades were sent on shore again, as having no proper ports fitted to receive them. Already the remaining 20 guns were too close together, to render the quarters sufficiently roomy. With these, however, the ships went to sea; and they were soon found neither to work well, nor to sail well. The utility of their stern-chase ports may be judged when it is stated, that, owing to the narrowness of the ships at the stern,

1813. there was no room to work the tiller while the guns were pointed through the ports. Of this discreditable oversight, and its evil consequences, we shall hereafter have to give a practical illustration.

A proof
afford-
ed of
the in-
suffici-
ency of
their
masts.

Of the relative stoutness of the spars of the british and american sloops of war, thus pitted against each other by the order of the board of admiralty, some idea may be formed, when it is stated, that the girth, just above the deck, of the mainmast of one of the latter, the *Frolic*, was 7 feet 8 inches; whereas the mainmast established upon the former class measured, at the same place, only 5 feet 8 inches. The *Cyrus*, if not most of the others, was "doubled," so as to increase her beam about 10 inches, and enable the ship to keep the sea in a gale of wind; and we remember seeing the *Medina*, at the king's dock-yard in Halifax, Nova-Scotia, having her lower masts fished, to prevent them from snapping in two with the weight of the top-gear above.

Already
mode
of pro-
ducing
ships
equal
to the
ameri-
can
sloops.

While the cutting-down system was pursuing, a mode presented itself of quickly getting ready a few ships, equal in size and force to the large american sloops. The 10 ships of the *M* class in the Abstracts averaged 534 tons, and mounted 22 carronades, 32-pounders, on the main deck. By having their quarterdecks and forecastles cut away, these ships would have been much improved in sailing and seaworthiness; and then, with two long 9 or 12 pounders in lieu of their two foremost carronades, and with their complement increased to 173 men and boys, they would have been far superior vessels to those built under the auspices of the gallant admiral. Even a precedent was not wanted. The *Hyæna*, of a similar construction to the ships of the above-mentioned class, was, when taken by the French in 1793, cut down to the clamps of her quarterdeck and fore-castle, and became a very fast-sailing and successful privateer. On her subsequent recapture by the British in 1797, the *Hyæna* was allowed to remain as a flush-ship, and was armed precisely in the

manner above recommended.* The height between the decks of ships of war must, for obvious reasons, be nearly the same; consequently the proportion of top-weight increases, as the length, breadth, and below-water depth of the vessel diminishes. This is the reason that frigate-built ships below 580 or 600 tons, carrying eight or ten guns upon the quarterdeck and fore-castle, are usually so crank and unsafe; and one cause of their sailing so ill is, that their masts must be shorter, and their sails smaller, to counteract the strong heeling propensity of their hulls.

Fortunately for the honour of the captains appointed to the new 20-gun ships, some newspaper of the day exaggerated their force and size, and extolled them as very formidable vessels. The consequence was, that the *Wasp*, *Frolic*, *Peacock*, and *Hornet* avoided every three-masted man of war they fell in with; confining the exercise of their prowess to the british brig-sloop, the utmost extent of whose force was well known to them. While we are making this assertion, we bear fully in mind the *chaffing* that took place between the *Hornet* and the *Bonne-Citoyenne*; but we shall very soon establish the fact, that the behaviour of the Americans on the occasion was nothing but chaffing, and that of the most despicable kind.

The schooner-classes of the two navies will require but a few words. None can compete with the Americans in the size, beauty, swiftness, or seaworthiness of their schooners. They will arm a schooner of 200 tons, with seven guns, including a traversing 18 or 24 pounder, and give her a crew of at least 100 able-bodied men. If this schooner is captured by the British and deemed eligible for the navy, her bulwarks are raised, and pierced with ports fore and aft, 14 carronades, 18 or 12 pounders, are crowded upon her deck, and she is established (there is no crowding here) with a crew of 45 or 50 men and

* See vol. ii. p. 131.

1813. at least six or seven very young boys. The top-hamper necessarily diminishes the vessel's rate of sailing; and another impediment frequently arises from the inexperience of her commander, in the art of working to advantage a schooner-rigged vessel.

Care necessary in judging of a ship's force by her denomination. To whatever is classed under one head, people are apt, and very naturally, to attach an idea of equality; and the stronger party is sure to triumph in his victory, until the weaker party has shown the disparity of force against which he had to contend. It too frequently happens, that this is not done; and, before it can be done with effect, two operations are necessary: the removal of one impression, and the substitution of another. The President and the Southampton* are "frigates;" the Peacock and the Childers† are "sloops of war;" and the following statement will show, that one "man-of-war schooner" may differ in force and size from another, to even a greater extent than in the case of the frigate or the sloop. The american privateer-schooner Harlequin, of Boston, measured 323 tons, and mounted 10 long 12-pounders, with a crew of 115 men. Her main-mast was 84 feet, and her fore yard 64 feet, in length. Her bulwark was of solid timber, and four inches higher, and two inches thicker, than that of the british 18-gun brig-sloop. The Whiting schooner and her class, on the other hand, measured 75 tons, and mounted four 12-pounder carronades, with a crew of 20 men and boys; and her bulwark, if it deserved the name, consisted, with here and there a small timber, of an outside and an inside plank.

Propriety of naval men of experience being consulted in the We trust that the importance of the subject, into which we have entered at such length, will be received as an excuse for this digression; but, in reality, it is only the concentration of remarks which would otherwise have been scattered over our accounts of the different american actions, and perhaps not so well understood, nor so usefully applied.

* See pp. 7 and 10. † See vol. v. p. 39.

Previously to quitting the topic of improvements in ship-building, we have one more observation to make. 1813.

It has already been stated, that the american government is in the habit of appointing an experienced naval captain, to superintend the construction of each of their larger ships of war. This, although accomplished with ease in a small navy like that of the United States, would be quite impracticable in a navy like that of England. But, as in most of the higher classes of british ships it is usual to construct many individuals from one draught, might not that draught, with an accompanying exposé, showing the size of the intended scantling, the number and nature of the ordnance, the length and diameter of the masts and yards, and, in short, every other particular calculated to dispense with the actual inspection of a model, be submitted to a committee of experienced naval officers? Had any three captains, or commanders, been consulted, when the Bonne-Citoyenne's beautifully proportioned form was proposed to be shortened and contracted for "improvement," the british navy would never have owned such ships as the Cyrus and her 17 class-mates.

construction of ships of war.

The number of commissioned officers and masters, belonging to the british navy at the beginning of the year 1813, was, Officers of the british navy.

Owing to a deficiency of seamen and the disaffected state of those that remained, the Scheldt fleet, numerically strong as it was, gave, during this year, very little trouble to those that blockaded it; nor did the Brest squadron, or fleet, as it now might almost be called, make any attempt to put to sea. On the 27th of August the newly-formed port of Cherbourg was opened, with great pomp, under the eyes of the empress Marie-Louise; and on the 12th of October the 80-gun ship *Zélandais*, the first line-of-battle ship constructed at Cherbourg, was launched: another was also getting ready with all possible despatch. Since the 28th of May the french 74-gun ship *Régulus*, from Rochefort, had anchored in the river of Bordeaux; and, according to the french accounts, she was the first ship of her class, that had ever entered the Gironde.

^{Fleets}
^{before}
^{and}
ⁱⁿ
^{Toulon}

Toulon was now the only french port to be looked to for any operations of importance between the fleets of England and France. The british Mediterranean fleet remained in the able hands of vice-admiral sir Edward Pellew, and the fleet in Toulon was still under the command of vice-admiral the comte Emeriau. The flag of the latter was flying on board the 130-gun ship *Impérial*, and the flag of the second in command, the baron Cosmao-Kerjulien, on board the *Wagram*, of the same force. On the 15th of August the 130-gun ship *Héros* was launched; making the sixth three-decker in the port. Not being able to discover the launching of any three-decker in Toulon named *Impérial*, we consider that the *Austerlitz* had recently changed her name; especially as, at the latter end of 1812, the flag of vice-admiral Emeriau was flying on board of her. The addition of the *Héros* makes the total number of line-of-battle ships 21; all, except the *Héros* and *Montebello*, at anchor in the inner and outer roads, in company with ten 40-gun frigates and one 20-gun corvette. On the stocks there were two 80s, and one 74, the latter in a very forward state.

Although a dearth of seamen, owing to the draughts sent away to the army, prevented the Toulon fleet, as a body, from making any serious attempt to put to sea during the year 1813, large divisions of it, when the wind would serve also for returning, frequently weighed from the road, and exercised in manœuvring between the capes Brun and Carquaranne. In the latter part of October the british fleet was blown off its station by a succession of hard gales, which lasted eight days; and it was only on the evening of the 4th of November, that the in-shore squadron, consisting of the 74-gun ships *Scipion*, *Mulgrave*, *Pembroke*, and *Armada*, captains Henry Heathcote, Thomas James Maling, James Brisbane, and Charles Grant, arrived off Cape Sicie. The main body of the british fleet at this time consisted of the

On the 5th, at 9 h. 30 m. A. M., vice-admiral comte Emeriau, in the *Impérial*, with, according to the french accounts, 12, and according to sir Edward Pellew's letter, 14, sail of the line, six frigates, and the *Victoire* schooner, got under way with a strong east-north-east wind, and stood to the usual spot for exercise. Captain Heathcote's squadron was off Cape Sicie; and the main body of the british fleet, consisting, as already shown, of nine sail of the line, had just hove in sight from the southward, standing under close-reefed topsails, to reconnoitre the port. At 11 h. 30 m. A. M., just as the french advanced squadron, of five sail of the line and four frigates, under rear-admiral the baron Cosmao, had got a little to

 french
 rear.

The british in-shore squadron immediately stood
 for the french rear ; and at 34 minutes past noon the
 leading british ship, the Scipion, opened a fire from
 her larboard guns upon the nearest french ships,
 which were then standing on the opposite or star-
 board tack ; as did also, in succession, the Mulgrave,
 Pembroke, Armada, and Pompée, (who had just
 joined,) as they followed the Scipion in line astern. At
 40 minutes past noon, having passed over, the Scipion
 wore, to bring her starboard broadside to bear ; and
 in two minutes afterwards the first french shot that
 took effect carried away part of the Pembroke's
 wheel. The five british 74s, having wore round
 and come to, continued the cannonade with their
 starboard broadsides, and were then not more than
 a mile distant from the shore near Cape Sepet.

Sir
 Edw.
 Pellew,
 with
 three
 ships,
 takes
 part in
 the
 action.

At 45 minutes past noon the advanced squadron
 filled and stood on ; and at 1 p. m. the Caledonia,
 Boyne, and San-Josef, who were far ahead of the re-
 mainder of their fleet, stood in-shore athwart the
 bows of the former. In four minutes the Caledonia
 opened a heavy fire from her larboard guns upon the
 sternmost french ship, the Wagram ; who, being then
 on the starboard tack, returned the fire with her

larboard guns. The Boyne and San-Josef, as they arrived in succession, also got into action with the french rear. Having reached the wake of the Wagram, the Caledonia wore, and came to on the starboard tack, still engaging; but the french ships, having the weathergage, in a few minutes got out of gun-shot, and the firing, in which the batteries had slightly participated, ceased.

The casualties on either side, arising from this skirmish, were not of any serious amount. The Caledonia received one shot through her mainmast and three or four in her hull; had a shroud and some backstays cut, and her launch and barge destroyed, with three seamen slightly wounded. One unlucky shot, which fell on the San-Josef's poop, struck off the leg of each of two fine young officers, lieutenant of marines William Clarke, and midshipman William Cuppage, and slightly wounded one marine and one seaman. The Boyne and Scipion had each one man wounded slightly; and the latter had another killed by an accident. The Pembroke had three men slightly wounded by shot, and the Pompée two men slightly burnt by accident; total, 12 wounded by the enemy's fire, and one killed and two slightly wounded by accident. The Armada escaped without any loss, but one of the enemy's shot passed through the bows of her launch and lodged in the booms.

The Agamemnon appears to have been the greatest sufferer among the french ships: she had her masts, rigging, and sails a good deal damaged, and received several shot in her hull, by which nine men were slightly wounded. The Wagram also suffered, but in a less degree, and had only two men wounded. A shot, that entered the roundhouse of the Borée, wounded two seamen, and carried away the wheel; a splinter from which slightly wounded captain Mahé. The Ulm had one man severely and another slightly wounded. Of the four advanced frigates, the Pénélope and Melpomène were the most engaged; both received damage in their sails, rigging, and hull,

 March. total loss on the french side 17 wounded. Leaving a
 small squadron off Toulon, sir Edward Pellew soon
 afterwards steered for Minorca, and on the 15th of
 the same month anchored in Port-Mahon. On the
 5th of December the french fleet in Toulon received
 an accession of force in the new 74-gun ship Colosse;
 and the close of the year left comte Emeriau still at
 his anchorage in the road.

Lieut.
 Banks
 of the
 Blazer
 takes
 possession
 of
 Cux-
 haven.

On the 14th of March lieutenant Francis Banks,
 of the Blazer gun-brig, commanding the small british
 force stationed off the island of Heligoland, having
 received information of the distressed state of the
 French at Cuxhaven and of the entrance of the Rus-
 sians into Hamburgh, took the Brevdrageren gun-
 brig, lieutenant Thomas Barker Devon, under his
 orders, and proceeded to the river Elbe, with the
 hope of intercepting such of the enemy's gun-vessels
 as might attempt to make their escape. Early on
 the morning of the 15th the two brigs entered the
 river, and found the french flotilla of 20 gun-vessels
 stationed at Cuxhaven in the act of being destroyed.
 On the 16th, by invitation from the shore, lieutenant
 Banks landed, and with a detachment of 32 troops,
 which he had embarked at Heligoland, took posses-
 sion of the batteries of Cuxhaven, and on the next day
 concluded a treaty with the civil authorities, by
 which it was agreed that the british flag should
 be hoisted in conjunction with the colours of
 Hamburgh.

De-
 tach-
 es
 two
 boats
 up the
 Elbe in
 quest
 of a
 priva-
 teer.

On the 20th, while the two gun-brigs were lying
 at anchor off Cuxhaven, lieutenant Devon volun-
 teered, with a boat from each brig, to go up the
 river in quest of a privateer of which information
 had just been received. Accordingly, in the night,
 taking with him the Brevdrageren's gig containing a
 midshipman and eight men, and the six-oared cutter
 of the Blazer, containing 11 men, commanded by

Mr. William Dunbar, her master, lieutenant Devon ^{1813.} proceeded to execute the service he had undertaken. ^{March}

On the 21st, at daylight, the two boats found ^{Lieut.} themselves off the danish port of Brunshuttel; ^{Devon} situated about 30 miles up the river, and close to ^{in his} two large galliots at anchor. Under the supposition ^{gig gal-} that these were merchant vessels, lieutenant Devon, ^{lantly} followed by the cutter at some distance, advanced ^{cap-} to examine them. On the near approach of the ^{tures} gig, the two vessels were found to be gun-boats; ^{danish} the nearest of which instantly hoisted danish colours, ^{gun-} hailed, and opened a fire, which, luckily for the ^{boats} people in the gig, passed over their heads. In this critical situation, lieutenant Devon considered that there was no safety but in resolutely boarding. He accordingly dashed alongside, and, in the smoke of the second discharge, which passed as harmlessly as the first, and amidst a degree of confusion among the Danes caused by the explosion of some cartridges, lieutenant Devon, his brother, midshipman Frederick Devon, (a youth only 12 years of age,) and eight men, captured, without the slightest casualty, the danish gun-boat Jonge-Troutman, commanded by lieutenant Lutkin of the danish navy, and mounting two long 18-pounders and three 12-pounder caronades, with a crew of 26 men; of whom two were wounded.

Mr. Dunbar arriving up, the prisoners were ^{And,} secured under the hatches, the cable cut, and sail ^{with} made after the other galliot, the commander of ^{the aid} which, on seeing the fate of his commodore, had cut ^{of an-} and steered for Brunshuttel, about four miles distant. ^{other} The prize-galliot soon gained upon her late consort; ^{boat,} and, the wind being light, the Blazer's cutter was ^{takes} despatched to cut off the fugitive from her port. ^{her} This Mr. Dunbar gallantly accomplished, and with ^{consort} his 11 men captured, without opposition, the danish gun-boat Liebe, of the same force as the Jonge-Troutman, and commanded by lieutenant Writt, also of the danish navy. This, it must be owned, was altogether a very gallant exploit, and lieutenant

1813. } Devon well merited the praises that were bestowed upon him for his conduct on the occasion.

Capt.
Farquhar
arrives
in the
Elbe.

Siege
and
surrender
of
Gluckstadt.

Early in the month of October captain Arthur Farquhar, of the 18-pounder 36-gun frigate *Desirée*, arrived at Heligoland, and assumed the command of the british naval force on that station. By this time the French had regained possession of Cuxhaven. After performing several important services up the Weser and Ems, captain Farquhar, on the 30th of November, with a small squadron of gun-brigs and gun-boats, successfully cooperated with a russian force in an attack upon the heavy batteries that defended Cuxhaven. Crossing the Elbe, captain Farquhar afterwards ascended to Gluckstadt, and cooperated with a detachment of the crown prince of Sweden's army in reducing that important fortress. On the 5th of January, 1814, after an investment of 16, and a bombardment of six days, Gluckstadt surrendered by capitulation.

Names
of
british
vessels
and
officers
em-
ployed.

The british squadron which, besides the *Desirée*, was employed on the occasion, appears to have been, the 10-gun schooner-sloop *Shamrock*, captain John Marshall, brig-sloop (late gun-brig) *Hearty*, captain James Rose, gun-brigs *Blazer*, lieutenant Francis Banks, and *Redbreast*, lieutenant sir George Morat Keith, and gun-boats, No. 1, lieutenant David Hammer, No. 2, master's mate Thomas Riches, No. 3, lieutenant Charles Henry Seale, No. 4, lieutenant Andrew Tullock, No. 5, midshipman John Hallows, No. 8, lieutenant Richard Roper, No. 10, lieutenant Francis Darby Romney, and No. 12, lieutenant John Henderson. Captain Farquhar, in his despatch, speaks also in high terms of captain Andrew Green, who commanded a party of seamen and marines on shore, and of his assistants, lieutenants Charles Haultain and John Archer and midshipman George Richardson; likewise of lieutenant Joshua Kneeshaw. The loss sustained by the flotilla amounted to three men killed, and 16 wounded, including captain Jones, midshipman Richard Hunt, and captain's clerk John Riches.

Their
loss on
the oc-
casion.

On the 16th of December, 1812, the french 40-gun frigate Gloire, captain Albin-Réné Roussin, sailed from Havre, with a very strong south-east wind, which carried her as far as the Lizard, and there left her, on the afternoon of the 17th, entirely becalmed. On the 18th, at daylight, the Gloire found herself nearly in the midst of nine vessels, the greater part of them evidently merchantmen. Two of the number, however, were vessels of war: the nearest was the british 18-gun ship-sloop Albacore; (sixteen 32, and eight 12, pounder carronades and two long sixes, with a crew of 121 men and boys,) captain Henry Thomas Davies; and, about four miles to the westward of her, was the 14-gun brig-schooner Pickle, lieutenant William Figg. At 8 A.M. the Gloire, who had been standing on the star-board tack, wore with a light air of wind and edged away for the Albacore, then bearing from her north-east by north. Each ship soon ascertained that the other was an enemy; and at 9 A.M. the Gloire hauled to the wind on the larboard tack, and made all sail to escape. Judging by this, probably, that the apparent french 40-gun frigate was an armée en flûte or large store-ship, captain Davies crowded sail in chase, followed, at some distance, by the Pickle; the latter and the Albacore making repeated signals, to apprize the vessels in sight of the presence of an enemy.

1813.
Dec.

Gloire falls in with and is chased by Albacore and Pickle.

At 10 h. 12 m. A. M., having by carrying down the breeze arrived within carronade range on the french frigate's weather quarter, the Albacore opened her fire; whereupon the Gloire hoisted french colours and fired in return, hauling up a little, to bestow a raking broadside upon her unequal antagonist. To avoid this the Albacore tacked. The breeze soon afterwards fell to nearly a calm; and at 11 A. M., finding her antagonist much too strong for her; the Albacore discontinued the action, with her fore spring-stay shot away, her rigging a good deal damaged; and, what was the worst of all, with the loss of one lieutenant (William Harman) killed

Albacore engages Gloire, but is obliged to desist.

1813. and six or seven men wounded. Strange to say,
 Dec. the french frigate herself did not seem disposed to
 renew the action, but wore and made all sail to the
 westward.

Alba- At 1 p. m., the Pickle having closed and a light
 core breeze having sprung up from the southward, the
 and Albacore again made sail, and at 3 p. m. was joined
 some in the chase by the 12-gun brig-sloop (late gun-brig)
 small Borer, captain Richard Coote, and 4-gun cutter
 vessels Landrail, lieutenant John Hill. At 5 p. m. the Al-
 renew bacore began firing her bow-chasers; as, on coming
 the up, did two out of her three (for the Landrail to
 attack. have fired her 12-pounder carronades would have
 been a farce) formidable consorts. To this alarm-
 ing cannonade, the Gloire replied with her stern-
 chasers, and continued running from the "esca-
 drille," as if each of her four pursuers had been a
 French frigate like herself. Thus the chase continued, but
 effects without any firing after 7 p. m., until midnight on the
 her 19th; when this dastardly french frigate, who, it ap-
 escape. pears, did not have a man hurt on the occasion, had
 run herself completely out of sight. Captain Davies
 merited great praise for his gallantry and persever-
 ance; and there cannot be a doubt that, by the
 boldness of the Albacore in chasing and attacking
 the Gloire, several merchant vessels were saved from
 capture.

Gloire On the following day, the 20th, the Gloire cap-
 cap- tured the Spy armed store-ship, from Halifax, Nova-
 tures Scotia, and, disarming her, sent her to England as a
 Spy cartel. Captain Roussin then steered for the coast
 store- of Spain and Portugal, and on the 28th, off the rock
 ship. of Lisbon, was chased for a short time by two ships
 of war. On the 1st of February he arrived to-wind-
 ward of Barbadoes, and returned soon afterwards to
 Europe. On the 25th, in the chops of the Channel,
 the wind blowing a gale with a raging sea, the Gloire
 fell in with the british 14-gun brig Linnet, lieu-
 tenant John Tracey. Bearing up under her foresail
 and close-reefed main topsail, the Gloire, at 2 h.
 30 m. p. m., arrived within hail of the Linnet and

ordered her to strike. Instead of doing so, the brig ^{1813.} boldly crossed the bows of the french frigate, and, regardless of a heavy fire which the latter commenced, got to-windward of her. As the Gloire outsailed the Linnet on every point, all that lieutenant Tracey could now do, was to endeavour to outmanœuvre her. This he did by making short tacks; well aware that, owing to her great length, the frigate could not come about so quickly as a brig of less than 200 tons. In practising this manœuvre, the Linnet had to cross the bows of the Gloire a second and a third time, (the second time so near as to carry away the frigate's jib-boom,) and was all the while exposed to her fire; but which, owing to the ill-direction of the shot from the roughness of the sea, did no great execution. At length, at 3 h. 30 m. P. M., having succeeded in cutting away some of the Linnet's rigging, the Gloire got nearly alongside of her; but the resolute lieutenant would not yet haul down the british colours. The Linnet suddenly bore up athwart the hawse of the frigate; and the Gloire, had she not as suddenly luffed up, must, ^{Linet is captured.} captain Roussin says, have passed completely over the brig. Being now under the guns of the Gloire, two of the latter's broadsides carried away the fore yard, gaff, and bowsprit of the Linnet, and compelled the brig to surrender. Such seamanship and intrepidity, on the part of lieutenant Tracey, show where the Gloire would have been, had he encountered her in a frigate. To do M. Roussin justice, he complimented his prisoner highly for the skill and perseverance he had shown; and all must allow, that the captain of the Gloire was an excellent judge of the best means to effect an escape.

On the 27th the Gloire and her prize anchored at Brest; and lieutenant Tracey and his officers and crew remained as prisoners until the spring of the ensuing year. On the 31st of May, 1814, a court-martial was held on board the Gladiator at Portsmouth, to try the late officers and crew of the Linnet for her loss. ^{Lient. Tracey tried and promoted} On that occasion, lieutenant Tracey received,

1813. along with an honourable acquittal, the most un-
 Sept. qualified praise for his conduct; and in 11 days
 afterwards, as we see by the list, was deservedly
 made a commander.

Mutine
 chases,
 en-
 gages,
 and
 cap-
 tures
 Invin-
 cible. On the 17th of April, in the morning, the british
 16-gun brig-sloop Mutine, captain Nevinson De
 Courcy, cruising in the bay of Biscay, discovered
 and chased a strange ship on her lee bow. At 2 p. m.
 the ship, which was the Invincible privateer, of
 Bayonne, Captain Martin Jortis, mounting 16 guns,
 (twelve french 18-pounder carronades and four long
 sixes,) with a crew on board of 86 men, partly
 Americans, hoisted french colours, and commenced a
 fire from her stern-guns; which, disabling the Mu-
 tine in her sails and rigging, occasioned her to drop
 astern. The Mutine immediately commenced re-
 fitting herself, and at 8 h. 40 m. again arrived within
 gun-shot; when the Invincible hoisted a light and
 opened a fire from her broadside. In this way the
 running fight was maintained until 10 h. 45 m. p. m.;
 when, the ship having had her main topgallantmast
 and jib shot away, the Mutine was enabled to close.
 Still it was not until after a spirited resistance of 50
 minutes, which made it 11 h. 30 m. p. m., that the
 Invincible hauled down her colours. The Mutine is
 represented to have had two men wounded in the
 action, but the loss, if any, sustained by the Invin-
 cible appears to have been omitted in captain De
 Courcy's letter.

Alphea
 chases
 and en-
 gages
 Renard On the 9th of September, at 3 p. m., the british
 schooner Alphea, of eight 18-pounder carronades,
 and 41 men and boys, lieutenant Thomas William
 Jones, fell in with and chased the french 14-gun
 privateer schooner Renard, captain De Roux, be-
 longing to Cherbourg, and acknowledged to have
 had on board a crew of 50 men. At midnight the
 Alphea commenced firing her chase-guns; and at
 1 a. m. on the 10th a close and spirited action com-
 menced. After a while, the Alphea, by the calm and
 the heavy swell that prevailed, became forced under
 the bows of the Renard. The crew of the privateer

immediately threw into the Alpheia several hand-
grenades and made an attempt to board, but were
gallantly repulsed by the crew of the british
schooner; which latter then poured in a most de-
structive fire of grape-shot, that swept the whole of
the Renard's forecastle. A second boarding attempt
was made, and the Frenchmen were again beaten off.

1813.
Sept.

The two schooners soon afterwards burst the
grapplings by which they had been held together,
and separated to a short distance; both still main-
taining a furious cannonade. At 3 h. 30 m. A. M.,
owing in a great measure to the number of hand-
grenades which had been thrown into her, the Alpheia
blew up; and along with her perished the whole of
her gallant crew. Three or four men were seen on
a piece of the wreck, but the Renard, having had
her jollyboat sunk by shot as it was towing astern,
and her launch cut to pieces as it lay on the booms,
could render no assistance; nor could the poor
fellows find their way to the privateer, although
repeatedly hailed to do so, as they had lost their
eyesight by the explosion.

Alpheia
blows
up, with
the
whole
of her
crew.

The loss on board the Renard, as acknowledged
by her officers, amounted to five men killed and 31
badly wounded, including the captain with the loss of
an arm, and three of his lieutenants. There was also
a fourth lieutenant, who took the command when
captain Le Roux was wounded. It is not unlikely,
therefore, that the "50 men" refer to the sailors
only, and that, officers included, the Renard had
from 70 to 80 men. As mounting "14 guns," this
schooner must have been about 200 tons measure-
ment: whereas the Alpheia, one of the bermudian
vessels, was only 111 tons. The execution admitted
to have been done by the Alpheia to her antago-
nist, was highly creditable to the gunnery of
the british crew, and renders it probable that,
had not the fatal accident happened, the Alpheia
would have made a prize of the Renard, although
the latter was so much superior to her in
force. It was, indeed, a lamentable occurrence;

Flibustier weighs from St.-Jean-de-Luz

Is chased by three british vessels.

Telegraph schooner attacks her.

French crew set vessel on fire.

and, to heighten the misfortune, lieutenant Jones was a very deserving officer.

In the early part of October the french brig-corvette Flibustier, mounting fourteen 24-pounder carronades and two long sixes or eights, and commanded by lieutenant de vaisseau Jean-Jacques-Léonore Daniel, lay at St.-Jean-de-Luz, about three leagues north-east of the bar of Bayonne, watching an opportunity to put to sea, with treasure, arms, ammunition, salt-provisions, and a few troops, for the garrison of Santona. The near approach of the marquess of Wellington's army at last made it necessary to move; and, taking advantage of the dark and stormy state of the weather, the Flibustier, at midnight on the 12th, attended by three "trinca-dores," or armed fishing-boats, weighed and stood alongshore to the south-west. At daylight on the 13th the french brig, then lying becalmed close under the heights near the mouth of Bayonne river, was seen and chased by the british schooner Telegraph, of twelve 12-pounder carronades, lieutenant Timothy Scriven, also by the 18-gun brig-sloop Challenger, captain Frederick Vernon, and 12-gun brig Constant, lieutenant John Stokes; the latter about six, the former upwards of eight, miles distant in the offing.

Favoured by a partial breeze, the Telegraph rapidly approached the Flibustier, who had by this time anchored under the distant protection of some batteries; and at 6 h. 45 m. p.m. the schooner commenced cannonading the brig in a raking position ahead. The Flibustier returned the Telegraph's broadside with such of her guns as would bear. The action continued in this way until about 7 p.m.; when, finding the two british brigs in the offing approaching to take a part in the combat, the french brig set herself on fire. The schooner continued discharging her guns for about half an hour longer. Lieutenant Scriven then ceased firing, and sent his boats to endeavour to save the vessel, whose crew had already reached the shore in their boats. The

schooner's boat got on board ; and so, it is believed, 1813.
 did some boats from the Challenger and Constant, ^{Oct.}
 but too late to save the Flibustier ; which at about ^{Flibus-}
 8h. 10 m. p. m. exploded, in sight of the english and ^{ties}
 french armies encamped on the east side of the ^{blows}
 Adour. The Telegraph had not a man hurt, nor, as ^{up.}

For his gallantry in advancing to attack a force so ^{Pro-}
 much superior to his own, lieutenant Scriven was ^{motion}
 promoted to the rank of commander ; and the ^{of lieut.}
 Telegraph, by his continuing to be captain of her, ^{Scriven}
 became a sloop of war. Lest we should appear to
 have underrated the force of the Flibustier, we are
 bound to state, that the official account of her de-
 struction assigns her a force of 16 carronades and
 two mines, with a brass howitzer, and four brass
 3-pounders. The swivels and howitzer she may have
 mounted ; but we doubt if the Flibustier carried
 more than 14 carronades, chiefly because we know
 not of a single instance, (the Abeille, as already
 stated, had been a foreign-built vessel,*) in which a
 regular french brig-corvette mounted more than 16
 guns, similar to the Renard, Oreste, and a great
 many others that have appeared in these pages.
 Moreover, very little time was allowed for the British,
 to take an accurate account of the force of the
 Flibustier.

On the 30th of September the two franco-batavian ^{Trave}
 40-gun frigates Trave and Weser, captains Jacob ^{and}
 Van-Maren and Paul-Roelof Cantz-Laar, put to sea ^{Weser}
 from the Texel, on a cruise off the Western Isles. ^{sail}
 On the 16th of October a violent gale of wind dis- ^{from}
 masted both frigates, and separated them from each ^{Texel}
 other. On the 18th, towards 1 A. M., latitude 47° ^{and se-}
 30' north, longitude 9° 18' west, the british 18-gun ^{parate}
 brig-sloop Scylla, captain Colin Macdonald, fell in ^{in a}
 with the Weser, then with the loss of her main and ^{gale.}
 mizen masts and fore topmast, steering east by north,
 on her way to Brest. After hailing the frigate se-
 veral times, the Scylla received a broadside from

* See vol. γ. p. 538.

1813. her. On this the brig made sail ahead. At daylight
 Sept. both vessels hoisted their colours; but captain Macdonald judged it not prudent to attack a ship that, although crippled in her masts, was so decidedly his superior in guns and men; especially, as the Scylla might herself get crippled, and, in the severe state of the weather, be thereby prevented from keeping sight of the frigate: a service on which the brig now assiduously employed herself.

Weser
 watch-
 ed by

 ist.
 On the 19th, at daylight, having passed the night in burning blue lights, firing guns, and throwing up rockets, to indicate that she was in chase of an enemy, the Scylla found herself alone, the thick weather obscuring the Weser from her view. Steering, during that day and night, a course deemed the most likely to rejoin the french frigate, the Scylla, at daylight on the morning of the 20th, fell in with the british 18-gun brig-sloop Royalist, captain James John Gordon Bremer. The latter volunteering, the two brigs, with the wind from the south-west, bore away to seek and engage the enemy, then supposed to be in the east-north-east. At 9 h. 30 m. A.M. the Weser was discovered in the north-east, and chased; latitude at noon $48^{\circ} 28'$ north, longitude $6^{\circ} 18'$ west. At 3 h. 30 m. P.M. the two brigs opened their fire, the Royalist stationing herself on the frigate's starboard bow, and the Scylla on her starboard quarter. At 5 P.M., being much cut up in their sails and rigging, and the Scylla having her mainmast shot through, and the Royalist five men badly wounded, the two brigs hauled off to repair their damages.

The
 two
 brigs
 haul off
 to re-
 pair da-
 mages.
 Since 1 h. 30 m. P.M. a sail had been observed to-leeward. This was the british 74-gun ship Rippon, captain sir Christopher Cole, using her utmost efforts to take a part in the action. Captain Macdonald now detached captain Bremer to reconnoitre the ship to-leeward. The Royalist accordingly bore up, and the Scylla continued following the french frigate. On the 21st, at a little before daylight, the Royalist spoke the Rippon, and again made all sail on a wind

Rippon

 ders.

to close the Scylla and frigate. At 9 h. 30 m. A. M. 1813. the Scylla, taking a raking position, recommenced firing at the Weser; and the Royalist, placing herself on the latter's larboard bow, soon joined in the action. In 10 minutes, finding that the Rippon was nearly within gun-shot on her lee quarter, and that all hopes of escape were at an end, the Weser fired her larboard guns at the Royalist, and, standing on towards the Rippon, hauled down her colours. A boat from the Royalist immediately boarded the french frigate; and the Rippon, on arriving up, took the prize in tow and conducted her to Falmouth. 1813.
Sept.

In this creditable performance on the part of the two brigs, the Scylla had two seamen wounded; and the Royalist two seamen killed, her first lieutenant, (James Waring,) master, (William Wilson, severely,) five seamen, one marine, and one boy wounded; total, on board the two brigs, two killed and 11 wounded. As a proof that the carronades of the brigs had produced some effect, the Weser, out of a crew of 340 men and boys, had four men killed and 15 wounded. Loss on
board
Scylla
and
Royal-
ist..

On the morning of the same day on which the Weser was captured, the british brig-sloop Achates, of fourteen 24-pounder carronades and two sixes, captain Isaac Hawkins Morrison, standing to the south-south-east with the wind at south-west, fell in with the Trave, upon her weather beam. The Achates immediately made sail in chase, and, as soon as she had fore-reached sufficiently, wore and stood for the french frigate. At 7 h. 50 m. A. M. the Achates gallantly engaged the Trave in passing, and received in return a fire that much injured her sails and rigging. At 8 A. M. a large ship was discovered bearing down. The Achates immediately hauled towards her and made the private signal; but the stranger, instead of answering it, tacked from the brig and hauled close to the wind. In the mean time the Trave had bore up to the eastward. At noon, latitude 46° 37' north, longitude 7° 26' west, the Achates was again near enough to exchange shots. Trave

tes.

1813. with the Trave, and continued engaging in an advantageous position on her quarter, until about 8 P. M.; when dark and squally weather concealed the Trave from her view. In this very spirited as well as skilful attack, captain Morrison had the good fortune not to lose a man; but the fire of the Achates had wounded two seamen belonging to the Trave.

Escapes
in the
dark.

Favoured by the darkness, the french frigate continued her course without further interruption, until, on the afternoon of the 23d, she encountered the british 18-pounder 36-gun frigate Andromache, captain George Tobin. At 3 h. 30 m. P. M. the Trave opened a fire from her stern-chasers, but the Andromache did not return it until 4 h. 15 m. P. M.; by which time she had gained a position on the french frigate's weather quarter. The fire which the Andromache now commenced was so close and well directed, that in a quarter of an hour the Trave hauled down her colours. Indeed, had the latter been an efficient instead of a dismantled ship, further resistance would have been vain, as the british 24-pounder 38-gun frigate Eurotas, captain John Phillimore, was approaching in the north-east. Out of her 321 men and boys, the Trave had one seaman killed, her captain, second lieutenant, two midshipmen, (one mortally,) and 24 seamen wounded. The Andromache's loss consisted of only two wounded, but one was her first lieutenant, Thomas Dickinson, severely.

Both the Weser and Trave, being new frigates, one of 1081, the other of 1076 tons, were added to the british navy. It was considered rather singular, that frigates of that size should have been armed upon the quarterdeck and forecastle with carronades of so light and ineffectual a caliber as 18-pounds. Of these, each frigate mounted 16, making, with her 28 long 18-pounds, 44 guns.

On the 9th of October, at 8 h. 30 m. A. M., the Owers light bearing north-north-east, the british bomb-vessel Thunder, captain Watkin Owen Pell, being on her way from Spithead to Woolwich, observed a large armed lugger to-windward under

Thun-
der de-
coys a
lugger

her on
board.

easy sail. His vessel being of a class likely to effect ^{1813.} more by decoying than chasing an enemy, captain ^{Oct} Pell altered his course towards the shore and took in his studding-sails. The bait took, and the lugger, which was the Neptune, of Dunkerque, mounting 16 guns, with a crew on board of 65 men, bore up in chase. At 10 h. 30 m. A. M., having arrived on the Thunder's larboard quarter, the french captain hailed the supposed merchantman to bring to, and strike.

With her numerous crew all ready, the Neptune then put up her helm, to lay her anticipated prize on board. The Thunder at the same moment put her helm down, and had barely time to fire her four carronades and a volley of musketry, when the lugger fell on board. A portion of the british crew were on her decks in a trice; and, after a severe conflict, in which four Frenchmen were killed and 10 wounded, including one mortally and five very severely, the Thunder made a prize of the Neptune, and that with so slight a loss as two men wounded.

On the 1st of November, in the morning, St. Vallery on the coast of France bearing south-south-east distant five miles, the 16-gun brig-sloop, Snap, captain William Bateman Dashwood, discovered five french armed luggers, three in the north-west close to-windward, and two considerably to-leeward. The Snap immediately wore and stood for the three weathermost luggers, but captain Dashwood had very soon the mortification to observe their separation, and then their escape by superior sailing. At 9 A. M. the Snap bore up in pursuit of the two leewardmost vessels, and, after using various deceptions, enticed one alongside. The british brig immediately opened her fire, and, at the end of a 10 minutes' cannonade, captured, without the loss of a man, the french privateer Lion, of Boulogne, mounting 16 guns, with 69 men; of whom the captain and four men were killed, and six severely wounded.

The british squadron, stationed off the north coast

1813. of Spain to assist the patriots, was under the command of captain sir George Ralph Collier, of the 38-gun frigate *Surveillante*. In the early part of May the force detached off the port of Castro de Urdeales consisted of the brig-sloops *Lyra*, captain Robert Bloye, and *Royalist* and *Sparrow*, captains James John Gordon Bremer and Joseph Needham Tayler. Although every thing was done by the three commanders and their respective officers and crews, in landing guns and bringing them into operation, the french force in the neighbourhood was too powerful to be resisted. By great exertions the garrison, consisting of about 1150 men, was embarked on board the brigs and conveyed to Bermeo. The loss sustained by the little squadron, in the service they performed, amounted to 10 wounded, including lieutenant Samuel Kentish and midshipman Charles Thomas Sutton (leg amputated) of the *Royalist*.

Evacuation of Castro and occupation of it by captain Tayler.

The principal object now was to blockade the port, and prevent the french garrison from getting any supplies. This was so effectually done, that on the 22d of June, after committing upon the inhabitants enormities of the most revolting description, the French evacuated the town and retired to Santona. The *Sparrow* having just at this moment arrived off the port, captain Tayler very properly garrisoned the castle; and such was the precipitate flight of the french commandant, on observing the approach of the british brig, that he fled without destroying the artillery or powder.

Breaching batteries open upon St. Sebastian's.

On the 10th of July, at 10 A.M., the breaching batteries, raised by the army of general Graham on the Chope sand-hills, were opened against the walls of St. Sebastian's; and a detachment of seamen was landed from sir George Collier's squadron to co-operate in the attack, under the orders of the first lieutenant of the *Surveillante*, Dowell O'Reilly. The loss sustained by this detachment, up to the evening of the 21st of July, amounted to two seamen killed,

lieutenant Robert Graham Dunlop, and five seamen wounded. The squadron stationed off St.-Sebastian's consisted, besides the *Surveillante*, *Lyra*, and *Sparrow*, of the 38-gun frigates *Révolutionnaire* and *Présidente*, captains John Charles Woolcombe and Francis Mason, brig-sloops *Beagle*, *Despatch*, and *Challenger*, captains John Smith, James Galloway, and Frederick Vernon, schooners *Holly* and *Juniper*, and two gun-boats.

1813.

Sept.

Squadron cooperating in the attack.

On the 31st of August two divisions of boats from the squadron, placed under the orders of captains Galloway and Bloye, were sent to make a demonstration on the back of the rock of St.-Sebastian's. The plan succeeded, and a large proportion of the garrison was diverted from the defence of the breach which, on the preceding day, had been made in the walls. The men-of-war brigs also weighed with a light breeze, and stood into the harbour. At 11 A. M. the assault by the breach took place, and at 1 h. 30 m. P. M. the town was entered and possessed; but the citadel still held out. Captain Smith of the *Beagle* was slightly wounded, also three or four of the seamen. On the 8th of September the breaching and mortar batteries opened a most ruinous fire upon the castle of La Motte, or citadel of St.-Sebastian's; and in a very short time general Rey, the governor, sent out a flag of truce to propose terms of capitulation, which were immediately agreed to. In addition to the ships already named, there were present cooperating in the attack, the 18-pounder 36-gun frigate *Magicienne*, captain the honourable William Gordon, and the gun-brig *Constant*, lieutenant John Stokes. Among the naval officers who distinguished themselves on the occasion, captain sir George Collier names lieutenant the honourable James Arbuthnot of the *Surveillante*, also midshipmen Digby Marsh, George Harvey, ——— Bloye, and William Lawson.

Town of St.-Sebastian assaulted and carried

Castle of La Motte surrenders.

On the 18th of March the british 38-gun frigate *Undaunted*, captain Thomas Ussher, chased a tartan

1813. under the battery of Carri, situated about five leagues
 March. to the westward of Marseille. Light winds prevent-
 ing the ship from getting up, lieutenant Aaron Tozer
 offered his services to destroy the battery. The
 boats under his orders, assisted by Mr. Robert
 Clennan the master, acting lieutenant Thomas
 Salkeld and lieutenant of marines Harry Hunt,
 pushed off accordingly to execute the service.
 The British landed, and in a few minutes afterwards
 carried the battery, mounting four 24-pounders, a
 6-pounder field-gun, and a 13-inch mortar; and this
 although the french troops were strongly posted
 behind palisadoes, and stood until the marines were
 in the act of charging bayonets, when they turned
 and suffered a severe loss. The guns at the battery
 were all destroyed, the tartan brought out, and the
 boats returned to the ship with no greater loss than
 two men killed and one wounded.

Capt. On the 30th, while the Undaunted was in company
 Walde- with the 38-gun frigate Volontaire, captain and senior
 grave officer the honourable Granville George Waldegrave,
 detach- and the 18-gun brig-sloop Redwing, captain sir John
 es boats Gordon Sinclair, 14 merchant vessels were discovered
 of Vo- at anchor in the harbour of Morgion, situated be-
 lon- tween Marseille and Toulon. Lieutenant Isaac
 taire, Shaw, first of the Volontaire, assisted by lieutenants
 &c. to of marines William Burton and Harry Hunt, pro-
 Mor- ceeded with the boats of the three ships, to endeavour
 gion. to cut out the convoy.

Lient. On the 31st, in the morning, lieutenant Shaw and
 Shaw his party landed at Sourion, and, marching over the
 lands hills at daylight, carried the two batteries of the
 and place in the rear, after a partial resistance from 40
 carries french troops stationed at them. Five 36-pounders
 batte- in one battery, and two 24-pounders in the other,
 ries. were thrown into the sea, one mortar well spiked,
 and all the ammunition destroyed. The boats, under
 Lient. lieutenant Dey Richard Syer, although elsewhere
 Syer opposed by two field-pieces, brought out 11 vessels,
 takes possession of tartans and settees, laden with oil, and destroyed
 vessels.

some others. The whole service was accomplished with so slight a loss as one marine killed, and two marines and two seamen wounded. The names of no other officers present, than those above given, appear in captain Waldegrave's letter, except midshipman Charles Wyvill, on whom great praise is bestowed. 1813.
May.

On the 2d of May captain Robert Hussey Moubray, of the 74-gun ship Repulse, detached 100 marines from that ship, under captain Edward Michael Ennis, along with the marines of the Volontaire and Undaunted, to destroy some newly erected works in the vicinity of Morgion; while the boats of the squadron, under lieutenant Isaac Shaw, first of the Volontaire, covered by the launches with their carronades and by the brig-sloop Redwing, brought out some vessels that were in the harbour. The detachment of marines landed, and drove a detachment of french troops to the heights in the rear of the harbour; where they were kept in check until the vessels were secured, and the batteries, on which were found nine gun-carriages and a 13-inch mortar, were blown up and destroyed. On this occasion lieutenant Shaw was wounded; and in the boats two men were killed and three wounded. The vessels brought out were six in number, all laden, but small. Capt. Moubray sends a detachment on shore to take vessels out of Morgion.
Marines land and defeat french troops while seamen secure vessels.

Between the 10th and 15th of May, through the judicious management of captain Charles Napier of the 8-pounder 36-gun frigate Euryalus, the french coasting trade, to and from Toulon to the eastward, was collected in Cavalarie road, to the number of upwards of 20 sail. Judging this convoy to be a proper object of attack, captain Edward Brace, of the 74-gun ship Berwick, detached for the purpose the boats of the two ships under the orders of lieutenant Henry Johnston Sweedland, assisted by lieutenant Alexander Sandiland, first of the Euryalus, and, among others, by midshipmen John Monk and Maurice Crawford, containing, along with a detachment of seamen, the Euryalus drives french convoy into Cavalarie.

1813. whole of the marines of the 74 and frigate, com-
 May. manded by captain William T. I. Matthews.

Boats On the morning of the 16th the united detachments
 of Ber- landed, and in 20 minutes were in possession of the
 wick batteries, and had begun to open a fire from them
 and upon the retreating enemy. The french national
 Eurya- xebec Fortune, carrying 10 long 8-pounders and
 lus four swivels, with a crew of 95 men, commanded by
 land, lieutenant Félix-Marie-Louis-Anne-Joseph-Julien
 and take Lecamus, tried to effect her escape; but the Eurya-
 batte- alus, pushing close in, cut her off. The french crew
 ries and then abandoned her, leaving her, with a hole made
 vessels, through her bottom by a shot from one of her guns
 and a train laid to her magazine, at anchor with a
 spring on her cable, under the fire of the Euryalus,
 the captured fort, and the launches. The vessel was
 promptly boarded by a division of the boats, and just
 in time to preserve her from blowing up or sinking.
 The vessels found in the harbour amounted to 22, of
 different descriptions. The whole were either taken
 or destroyed; and the object of the enterprise was
 fully accomplished, with no greater loss than one
 marine killed and one seaman missing.

British On the 18th of August an attack was made upon
 attack the batteries of Cassis, a town between Marseille
 and and Toulon, by the Undaunted frigate, Redwing brig,
 carry and 16-gun brig-sloop Kite, captain the honourable
 batte- Robert Cavendish Spencer, accompanied by a de-
 ries of tachment of boats from the three first-named vessels,
 of Cassis, and from the Caledonia, Hibernia, Barfleur, and
 take Prince-of-Wales line-of-battle ships, part of sir
 out Edward Pellew's fleet. Owing to light winds, the
 vessels, Undaunted could not take up the anchorage that
 &c. captain Ussher intended; but the Redwing and Kite,
 in spite of a fire from four batteries that protected
 the entrance of the bay, swept themselves in, and
 took a most judicious position for covering the
 marines; who, led by captain Jeremiah Coghlan, of
 the Caledonia, carried the citadel battery by esca-

lade. The marines then drove the French before them, at the point of the bayonet, and pursued them through the batteries to the heights that command the town. The boats, under the direction of captain sir John Sinclair of the Redwing, then entered the mole, across the entrance to which two heavy gun-boats were moored, and captured them, a third gun-boat, and 24 merchant settees and tartans.

1813.
Feb.

The loss sustained by the British in executing this dashing enterprise was rather serious, amounting to four marines killed, one lieutenant, (Aaron Tozer,) one petty officer, and 14 marines wounded. In his official letter, captain Ussher mentions, besides those already named, the following officers as having behaved with distinguished gallantry: lieutenants Joseph Robert Hownam and Joseph Grimshaw, captains of marines Thomas Sherman and Thomas Hussey, and lieutenants of marines Harry Hunt, Robert Turtliff Dyer, William Blucke, John Maule, Thomas Reeves, Alexander Jarvis, Edward Mallard, and Samuel Burdon Ellis. Lieutenant Hunt, it appears, was the first who entered the citadel battery, by a ladder, under a galling fire.

Loss on
the oc-
casion.

On the 26th of February, in the morning, the british 12-pounder 32-gun frigate Thames, then captain Charles Napier, and 18-pounder 36-gun frigate Furi-
euse, captain William Mounsey, having on board lieutenant-colonel Coffin and the second battalion of the 10th regiment of foot, bore up for the narrow entrance (about a quarter of a mile across) to the harbour of the island of Ponza on the coast of Naples; and, giving and receiving a fire from the batteries on each side, anchored close across the mole-head. Colonel Coffin and the troops were then landed, and pushed for a tower into which the enemy had retreated. The appearance of the troops, aided by the severe fire of the ships, induced the governor to hoist a flag of truce. This led to a capitulation, and the island on the same day surrendered to the arms of his britannic majesty. Nor did the British lose a single man in either service,

Thames
and
Furi-
euse
attack

island
of
Ponza.

1813. although the batteries mounted ten 24 and 18
 Feb. pounders and two 9-inch mortars; and although the
 Thames was hulled three times and the Furieuse
 twice, besides having their sails and rigging a good
 deal cut.

Capt. Hall attacks an armed convoy at Pietra-Nera. A convoy of 50 sail of armed vessels, chiefly
 neapolitan gun-boats, having assembled at Pietra-
 Nera on the coast of Calabria, to be ready to trans-
 port to Naples timber and other government pro-
 perty, captain Robert Hall, who commanded the
 sicilian flotilla stationed at Messina, volunteered,
 with two divisions of gun-boats and four companies
 of the 75th regiment, under the command of major
 Stewart, supplied by lieutenant-general lord William
 Bentinck at Palermo, to destroy the enemy's works.
 Troops land and storm the heights. On the night of the 14th of February captain Hall
 proceeded to the attack; but, owing to light and
 contrary winds, the boats did not arrive at
 Pietra-Nera until nearly daylight on the 15th; when
 major Stewart, with about 150 men, and an auxiliary
 party of seamen commanded by lieutenant Francis
 Le Hunte, landed, and, without waiting for the re-
 mainder of the force intended to be employed,
 pushed up a height, the possession of which a com-
 plete battalion, with two troops of cavalry and two
 pieces of artillery, were prepared to dispute.

Carry them after a desperate resistance. Assisted by a corporal's detachment of the rocket
 corps, the british troops charged the height in the
 most determined manner, and succeeded only after
 as determined a resistance, the french colonel-com-
 mandant, Roche, and most of his officers, being
 killed or made prisoners, and the height literally
 covered with dead. The division of the flotilla
 Batteries stormed and carried by lieutenant Le Hunte and a party of seamen. under captain Imbert had by this time commenced
 a most destructive cannonade on the batteries;
 which held out with such obstinacy, that captain
 Hall was obliged to order them to be success-
 ively stormed. This service was performed by
 lieutenant Le Hunte, with a party of seamen, in a
 very gallant style. At 8 A. M. every thing was in

the possession of the assailants; the most valuable of the enemy's vessels and timber launched, and the rest on fire. Upwards of 150 French were killed and wounded, and 163 made prisoners including several of the principal officers. Major Stewart, whose behaviour is highly praised by captain Hall, fell by a musket-shot while, in company with the latter, pushing from the shore after the troops had embarked. The loss on the part of the navy amounted to only one boatswain and one seaman killed and seven seamen wounded.

1813.
Jan.

Death
of
major
Stew-
art.

On the 6th of January, at daybreak, as the british 38-gun frigate *Bacchante*, captain William Hoste, and 18-gun brig-sloop *Weasel*, captain James Black, were lying becalmed about five leagues to the south-east of Cape Otranto, at the mouth of the Adriatic, five gun-vessels were discovered; three in the south-west, steering towards Otranto, and two in the south-east, steering to the eastward. Ordering, by signal, the *Weasel* to attend to the latter, captain Hoste sent the *Bacchante*'s boats, under the command of lieutenant Donat Henchy O'Brien, assisted by lieutenants Silas Thomas Hood and Frank Gostling, lieutenant of marines William Haig, master's mates George Powell and James McKean, and midshipmen the honourable Henry I. Rous and William Waldegrave, Thomas Edward Hoste, James Leonard Few, and Edward O. Pocock, in pursuit of the division in the south-west. At 8 A. M. lieutenant O'Brien in the barge captured the sternmost gun-boat, mounting two guns, one french 12, and one 6-pounder, both on pivots, and manned with 36 men, commanded by the senior french officer of the three, all of whom were *enseignes de vaisseau*.

boats.

Leaving, to take possession of the prize, the first gig, commanded by midshipman Thomas Edward Hoste, lieutenant O'Brien pushed on after the two remaining gun-vessels, then sweeping with all their strength towards the coast of Calabria. Sending his prisoners below, and fastening the hatches over them, young Hoste, with his seven men, in the most

1813. gallant manner, loaded and fired the bow-gun at the
 Feb. retreating gun-boats; which, in a little time, were
 also captured. This dashing enterprise, with lieutenant O'Brien's usual good fortune, was achieved without any loss, although the shot from the gun-vessels cut the oars from the men's hands as the boats were pulling towards them. For his gallantry on the above and several other occasions, lieutenant O'Brien was promoted to the rank of commander.

Lieut.
 Webb
 gallantly
 captures
 the two
 remaining
 gun-boats.

The Weasel not being able to overtake her two gun-vessels, two of her boats under lieutenant Thomas Whaley and midshipman James Stewart, and a boat belonging to the Bacchante under master's mate Edward Webb, proceeded in chase. The Bacchante's boat, taking the lead, soon overtook, and, although she carried only a 3-pounder in the bow with 18 men, captured, in spite of a warm opposition, the sternmost french gun-boat, armed the same as that already described, and having 40 men actually on board. Leaving the captured vessel to be taken possession of by the boats astern, Mr. Webb pushed after the remaining gun-boat, and carried her in the same gallant manner, and with equal impunity as to loss.

 Hood
 takes a
 french
 gun-boat.

On the 14th of February, early in the morning, the Bacchante sent her barge, armed with a 12-pounder carronade and manned with 23 officers and men under lieutenant Hood, in chase of a vessel seen by the night-glass to be sweeping and steering for Otranto. After pouring in a destructive fire of round shot and musketry, lieutenant Hood, assisted by lieutenant of marines William Haig and master's mates William Lee Rees and Charles Bruce, boarded and carried the french gun-vessel Alcinous, of two long 24-pounders and 45 men, last from Corfu. The only person hurt on the british side was lieutenant Hood, who received a severe contusion on the loins by a fall; so severe, indeed, that this gallant young officer became eventually deprived of the use of both his legs. The loss on the french side amounted to two killed and nine wounded, and the

 wound
 of lieutenant.
 Hood.

gun-boat was so shattered by the carronade, that she had three feet water in her hold. As soon, therefore, as the prisoners were removed, it was found necessary to set the prize on fire. 1813.
May.

Notwithstanding that an officer of acknowledged merit is now walking on crutches, in consequence of an incurable lameness produced by the wound he received in this truly gallant enterprise, no other notice was taken in the London Gazette of captain Hoste's letter on the subject, than a statement, that two letters, dated on the 14th of February, had been received: "One, reporting the capture, off Otranto, of l'Alcinous french gun-boat, carrying two guns and 32 men, and of eight trading vessels under her convoy from Corfu; the other, stating the capture of la Vigilante french courier gun-boat, from Corfu to Otranto with despatches, and having on board, as passenger, the general of artillery Corda and his staff."

Capt.
Hoste's
letter
not
pub-
lished
in the
Ga-
zette.

On the 11th of May, receiving information that a convoy of enemy's vessels were lying in the channel of Karlebago, captain Hoste proceeded thither; but, on account of a contrary wind and strong current, the Bacchante did not arrive there until the morning of the 15th. As the port of Karlebago offered excellent shelter for enemy's vessels, captain Hoste resolved to destroy the works that defended it. The governor refusing to accede to the terms offered, the Bacchante anchored within pistol-shot of the battery, which mounted eight guns; and, after a good deal of firing, a truce was hung out, and the place surrendered at discretion. The marines, and a detachment of seamen under lieutenant Hood, landed and took possession. The guns of the place were embarked, the public works destroyed, and the castle blown up; and the Bacchante retired with the loss of four seamen severely wounded, two of them with their arms shot off.

Bac-
chante

stroys
works
at Kar-
lebago.

On the 12th of June, at daylight, the Bacchante discovered an enemy's convoy under the town of Gela-Nova, on the coast of Abruzza. As the frigate was six or seven miles to-leeward of them, with a

Boats

voy.

1813. light breeze and a strong current against her, captain
 June. Hoste detached the boats under lieutenant Hood, with discretionary orders, either to attack the convoy or to wait till the *Bacchante* arrived. Lieutenant Hood took with him lieutenant Frank Gostling, acting lieutenant Edward Webb, lieutenants of marines Charles Holmes and William Haig, master's mate William Lee Rees, and midshipmen James Rowe, Thomas Edward Hoste, Francis George Farewell, the honourable William Waldegrave, Thomas William Langton, James M'Kean, and Samuel Richardson.

Lient. Hood takes 10 gun-boats, &c. Lieutenant Hood found the enemy much stronger than had been expected, consisting of seven large gun-boats, mounting each one long 18-pounder in the bow, three smaller gun-vessels, with a 4-pounder in the bow, and 14 sail of merchant vessels, four of which also had guns in the bow; and the shore astern of the vessels was lined with troops intrenched on the beach, having with them two field-pieces. This, "says captain Hoste," was the force opposed to a frigate's boats; but no disparity of numbers could check the spirit of the brave officers and men employed on this service. The attack was determined on instantly, and executed with all the gallantry and spirit which men accustomed to danger and to despise it have so frequently shown; and never was there a finer display of it than on this occasion." The boats, as they advanced, were exposed to a heavy fire of grape and musketry; and it was not until they were fairly alongside the gun-boats, that the crews of the latter slackened their fire: they were then driven from their vessels with great loss. The troops on the beach, stated by the prisoners to amount to 100 men, fled on the first fire, and their two field-pieces were destroyed by the british marines. In performing this very brilliant exploit, the boats of the *Bacchante* sustained a loss of two seamen and one marine killed, and five seamen and one marine wounded.

On the 22d of April, at daybreak, the brig-sloop

Weasel, cruising about four miles to the east-north-^{1813.}
 east of the island of Zirana, discovered and chased ^{April.}
 a convoy, close to the main land, making for the ^{Weasel}
 ports of Trau and Spalatro. As the brig ap- ^{chases}
 proached, the vessels separated in different direc- ^{and}
 tions, the greater part, with 10 gun-boats, bearing ^{attacks}
 up for the bay of Boscalina. These the Weasel ^{10 gun-}
 continued to chase under all sail; and at 5 h. 30 m. ^{boats.}
 A. M. they anchored in a line about a mile from the
 shore, hoisted french colours, and commenced firing
 at her. The wind blowing strong from the south-
 east, which was directly into the bay, the sails and
 rigging of the brig were considerably damaged be-
 fore she could close. At 6. A. M., however, the
 Weasel anchored with springs, within pistol-shot of
 the gun-boats; and a furious action commenced.
 At the end of 20 minutes the latter cut their cables,
 ran closer in, and again opened their fire. This in-
 creased distance not suiting her carronades, the ^{Cap-}
 Weasel cut her cable, ran within half pistol-shot of ^{tures}
 the gun-boats, and recommenced the action. Three ^{three,}
 large guns, at the distance of 30 yards from each ^{drives}
 other, and 200 or 300 musketry, on the heights im- ^{two on}
 mediately over the british brig, now united their fire ^{shore,}
 to that of the gun-boats. The engagement continued ^{and}
 in this way until 10 A. M.; when three of the gun-boats ^{sinks}
 struck their colours, two were driven on shore, and ^{one.}
 one was sunk.

The remaining four gun-boats were now reinforced ^{Re-}
 by four more from the eastward; who anchored out- ^{main-}
 side the Weasel, and commenced firing at her. ^{ing four}
 This obliged the brig to engage on both sides, but ^{rein-}
 the outer gun-boats afterwards ran in and joined the ^{forced}
 others; all of whom now placed themselves behind ^{by four}
 a point of land, so that the Weasel could only see ^{more}
 their masts from her deck. Here the gun-boats ^{attack}
 commenced a most destructive fire, their grape-shot ^{Weasel.}
 striking the brig over the land in every part. At
 this time the Weasel's crew, originally short by the
 absence of several men in prizes, was so reduced,
 that she could with difficulty man four guns; the

1813. marines and a few of the seamen firing musketry, her
 April. grape being all expended. The action lasted in this way until 3 P. M., when the gun-boats discontinued their fire. At the expiration of 40 minutes the engagement recommenced, and continued, without intermission, until 6 h. 30 m. P. M., when the firing entirely ceased on both sides.

Her critical situation. The Weasel was now in a very critical situation: she was but a few yards from a lee-shore, almost a complete wreck, with the whole of her running, and the greater part of her standing, rigging cut to pieces, most of her sails shot from the yards, her masts shot through in several places, her anchors all destroyed or rendered unserviceable, her hull pierced with shot, five of which had entered between wind and water, and her two pumps shot away between the decks, so that the crew could with difficulty keep the brig free by constantly bailing at both hatches. In addition to all this, the Weasel had already lost 25 men in killed and wounded. Captain Black, nevertheless, after dark, sent his boats, and destroyed, besides the gun-boats that had struck and gone on shore, eight of the convoy; the boats bringing away some of the enemy's anchors, by the aid of which, the brig was enabled to warp herself out.

Capt. Black sends his boats and destroys vessels.

Weasel again attacked by gun-boats and a battery on shore. On the 23d, at daybreak, having warped herself about a mile from the land, the Weasel was again attacked by the gun-boats, who, taking a raking position, annoyed the brig much; especially as, her last cable being half shot through and the wind blowing strong in, she could not venture to bring her broadside to bear upon them. All this day and night the Weasel continued warping out from the shore, but very slowly, her people being reduced in numbers and exhausted with fatigue. On the 24th, at noon, the French opened a battery, which they had erected, on a point of the bay close to which the Weasel was obliged to pass; and at 1 P. M. the gun-boats, pulling out in a line astern, recommenced their fire. The wind was now moderate, and shortly

afterwards it fell calm. At 5 P. M. the gun-boats, 1813. having got within range, received the contents of the brig's larboard broadside and sheered off; but, owing to the calm, the Weasel was unable to follow up her advantage, and they effected their escape. Feb. Beats them off.

In this very gallant, and, considering the extrication of the vessel from such a host of difficulties, admirably conducted enterprise, the Weasel had her boatswain, (James Toby,) three seamen, and one marine killed, and her commander, badly wounded by a musket-ball through the right hand; but, with a modesty that did him honour, captain Black would not suffer the surgeon to insert his name in the official report. The brig's remaining wounded consisted of her first lieutenant, (Thomas Whaley, severely,) one master's mate, (William Simkin, severely,) one midshipman, (James Stewart,) 19 seamen, and two marines wounded. The loss sustained on the part of the french gun-boats, and at the batteries on shore, could not be ascertained, but must have been severe. Her heavy loss.

On the 2d of February, at daylight, Faro bearing south-south-east distant six miles, the british 18-gun ship-sloop Kingfisher, captain Ewell Tritton, discovered several trabaccolos near Melara steering to the southward. There being little wind, captain Tritton detached the cutter and pinnace, under acting lieutenant George H. Palmer and Mr. John Waller the gunner, to intercept the vessels. After a five hours' chase, the two boats succeeded in capturing one trabaccolo, and in running nine on shore near St.-Catharine's in the island of Corfu, five of which were totally destroyed. In executing this service, the two boats were exposed to a heavy fire of musketry from the heights and from a one-gun battery, and sustained a loss, in consequence, of two men killed and seven severely wounded. Two boats of Kingfisher under lieut. Palmer take and destroy vessels.

On the 6th of January, at 2 P. M., a division of the boats of the 18-pounder 36-gun frigate Havannah, captain the honourable George Cadogan, placed

1813. under the orders of lieutenant William Hamley, attacked and carried the french gun-boat No. 8, of one long 24-pounder and 35 men, although the vessel was prepared in every respect and was supported by musketry from the shore to which she had been made fast. Lieutenant Hamley had no expectation of meeting an armed vessel, until, upon opening the creek in which the gun-boat lay, the boats were fired upon, and desired by the troops drawn up on the beach to surrender. Three merchant vessels were taken at the same time; and the british loss amounted to one master's mate (Edward Percival) killed and two seamen wounded.

On the 22d of March the boats of the Havannah, under the same commanding officer, assisted by lieutenant of marines William Hockly, captured, under the town of Vasto, a large trabaccolo, mounting three long french 8-pounders, and destroyed a similar vessel laden with oil. On the 26th, lieutenant Hamley, assisted again by lieutenant Hockly, captured five armed trabaccolos and five feluccas laden with salt, near the town of Fortore. In both instances, the vessels were hauled aground, and were under the protection of a strong body of military and some guns on the beach. No greater loss, notwithstanding, was sustained by the British in either enterprise, than two men slightly wounded. On the 17th of June, in the morning, the boats of the same frigate, still commanded by lieutenant Hamley, landed and brought off, from under the town of Vasto and from the fire of eight guns, 10 sail of merchant vessels; and that with no greater loss than three men slightly wounded.

On the 21st of December, 1812, the british 38-gun frigate Apollo, captain Bridges Watkinson Taylor, accompanied by the brig-sloop Weasel, chased a trabaccolo under the protection of the tower of St.-Cataldo. As this tower was reputed to be the strongest between Brindisi and Otranto, captain Taylor resolved to attempt its destruction. The boats of the two vessels were accordingly detached

on that service, under the orders of lieutenants George Bowen and Michael Quin. The enemy became so much discouraged at having Murat's neapolitan colours cut down by the first shot from the Apollo's barge, that the tower was carried without the assistance of the ships or the slightest loss. It contained a telegraph, three carriage-guns, and three swivels, and was blown up.

On the 18th of January, 1813, rear-admiral Thomas Francis Fremantle, the british commander in chief in the Adriatic, detached the Apollo, accompanied by the Esperanza privateer and four gun-boats, having on board 250 troops under lieutenant-colonel Robertson, to attack the island of Augusta. On the 29th the island surrendered; and captain Taylor bestows great praise upon lieutenant Bowen, first, and Mr. Thomas Ullock, purser, of the Apollo, who served on shore; also, for their gallantry in the frigate's barge, launch, and yawl, midshipmen William Henry Brand, William Hutchinson, and William David Folkes. Colonel Robertson having left a garrison in Augusta, the Apollo and small vessels sailed, on the 1st of February, for the neighbouring island of Curzola; and, on the same night, 160 soldiers, 70 seamen, and 50 marines, with a howitzer, landed at Port Bufalo, and surprised and carried a hill that commanded the town. Finding that, notwithstanding the British had got their field-guns to this spot and that the advance was already in possession of the suburbs, the enemy appeared determined to hold out, captain Taylor took off the Apollo's seamen, and on the morning of the 3d attacked and silenced the sea-batteries. This led to an immediate capitulation. The loss to the British on the occasion amounted to two seamen killed and one slightly wounded, and the Apollo had her mainmast badly wounded and her rigging much cut.

On the night of the 11th of April captain Taylor sent three boats of the Apollo, and two belonging to

1813. the 32-gun frigate Cerberus, captain Thomas Garth, April. cruising in company, to take temporary possession of the Devil's island near the north entrance of Corfu; by which the boats captured a brig and trabaccolo going into Corfu with grain. On the 14th the two frigates chased a vessel, which, on its falling calm, escaped into Malero. Perceiving that the five boats were proceeding to attack her, and fearing from the natural strength of the island that they would not succeed, captain Taylor sent to desire that the boats would wait until the Apollo came up. The message, however, arrived too late, and lieutenant Edward Hollingworth Delafosse, first of the Cerberus, and Mr. Ullock, purser, of the Apollo, were wounded. On the arrival of the Apollo, captain Taylor landed the marines; who, after some skirmishing, captured the island, and found eight vessels laden with grain, but scuttled.

Brin-
disi.

On the 17th of May, while cruising off Otranto, the Cerberus discovered an enemy's vessel close to the land a little to the southward of Brindisi; and which, upon being chased, ran herself on shore under a martello tower. Captain Garth immediately despatched three boats belonging to the Cerberus, under lieutenant John William Montagu, and two belonging to the Apollo, under lieutenant William Henry Nares, to attempt to bring out the vessel. This, after receiving her fire, they accomplished without any loss, and drove some of the enemy's troops, who had come down to protect her, a considerable way up the country. The vessel was armed

with a 6-pounder in the bow and a swivel. On the next morning the boats brought off a gun from a martello tower a little further to the southward.

1813.
June.

On the 27th, observing a convoy collected in Otranto, which it was thought would push for Corfu the first north-west wind, captain Garth, on the following morning, took a station off Faro, to endeavour to intercept them, and sent the barge and pinnace of the Cerberus and the barge and gig of the Apollo, under lieutenants Montagu and Nares, close in shore. At about 1 A.M. the vessels came out, protected by eight gun-boats. Notwithstanding this strong force, and that they were aided by three more gun-boats from Faro, and the cliffs covered with french troops, the four british boats attacked them in the most determined and gallant manner. Lieutenant Nares, in the Apollo's barge, boarded and carried one gun-boat, and midshipman William Hutchinson, in the Apollo's gig, actually boarded and carried another before the barge of the Cerberus could get along-side. In boarding another gun-boat, Mr. Thomas Richard Suet, master's mate of the Cerberus, was shot through the heart. This, with one seaman killed, and one marine dangerously wounded, was the extent of the british loss. The gun-boats taken had each a 9-pounder in her bow and two 4-pounders abaft, and were carrying troops to Corfu. Four of the convoy were also taken.

On the 17th of June, at 9 P.M., captain John Harper, of the 18-gun brig-sloop Saracen, accompanied by lieutenant William Holmes and lieutenant of marines Edward Hancock, put off with his boats containing 40 men, and at 11 P.M. landed upon the island of Zapano. After a difficult march of three miles, captain Harper surprised and took prisoners a corporal's guard that was in advance. Pushing for the guard-house and commandant's quarters, he then carried the whole by the bayonet, without loss, and took 36 prisoners, including the commanding officer of the two islands of Zapano and Mezzo. The remaining

off
Goro.

On the 29th of April the boats of the 74-gun ships Elizabeth and Eagle, captains Edward Leveson Gower and Charles Rowley, under the orders of lieutenants Mitchell Roberts and Richard Greenaway, assisted, among others, by lieutenant Thomas Holbrook, fell in, off Goro, with a convoy of seven armed merchant vessels, laden with oil. Four of them were captured, and the remaining three ran themselves on shore into a tremendous surf, under the protection of a two-gun battery, two schooners, and three settee gun-boats, that opened a most galling fire. Notwithstanding all these difficulties, one of the vessels was brought off, and another destroyed, without a casualty.

Boats
of

This service was executed with no greater loss than one man wounded.

Boats
of Eli-
zabeth
take
possession of
Dignano.

On the 20th, at daybreak, captain Gower caused to be landed at Dignano, opposite to the Prioni islands, 50 seamen from the Elizabeth, under the orders of lieutenants Roberts and Bennett, and the marines under captain Graham and lieutenant Price; who, assisted by lieutenant Henry Richard Bernard with a division of armed boats, took possession of the town, and made prisoners of the french troops within it, without the slightest loss.

On the 3d of July, in the morning, rear-admiral Fremantle, with the 74-gun ships Milford, (flag.)

captain John Duff Markland, Elizabeth, and Eagle, 1813.
 Bacchante frigate, and gun-brig Haughty, lieutenant
 James Harvey, got under way, with a light breeze
 at south-west, from an anchorage about four miles
 from Fiume; and, leaving a detachment of boats
 and marines with the Haughty to storm the battery
 at the mole-head as soon as the guns were silenced,
 proceeded to attack the sea-line batteries of the
 town, mounting 15 heavy guns. A shift of wind to
 the south-east, aided by a strong current from the river,
 broke the ships off, and the Eagle could only fetch the
 second battery, opposite to which she anchored; and
 against which she presently opened so well-directed a
 fire, that the fort soon became silenced.

July.
 Rear-
 adm.
 Fremantle
 attacks
 Fiume.

This being communicated by telegraph, rear-
 admiral Fremantle made the signal to storm; when
 captain Rowley, leading in his gig the first detach-
 ment of marines, took possession of the fort and
 hoisted english colours; while captain Hoste, with
 the marines of the Milford, took and spiked the guns of
 the first battery, which had been under the fire of the
 Milford and Bacchante, and early evacuated. Leav-
 ing a party of seamen to turn the guns of the second
 battery against the others, captain Rowley, without
 losing time, boldly dashed on through the town,
 although annoyed by the enemy's musketry from
 the windows of the houses, and a field-piece
 placed in the centre of the great street; but the
 marines, headed by lieutenants Samuel Lloyd and
 Edmund Nepean, and the seamen from the boats,
 proceeded with such firmness, that the french troops
 retreated before them, drawing the field-piece until
 they came to the square; where they made a stand,
 taking post in a large house. At this time the boats,
 under captain Markland, with their carronades,
 opened upon the gable end of it with such effect,
 that the French gave way at all points, and forsook
 the town in every direction. Captain Hoste, with
 his division, followed close to captain Rowley; and,
 on their junction, the two captains took possession

 take
 the
 town.

1813. of the two batteries, along with the field-piece,
 July. stores, and shipping; but no prisoners were made,
 the governor and every officer and man of the
 garrison having ran away.

Slight
 loss in-
 curred. Considering that the number of troops in the town,
 besides the natives, was upwards of 350, the loss
 on the british side, in amounting to only one
 marine killed, and lieutenant Lloyd and five seamen
 and marines wounded, was comparatively trifling.
 Although the town was stormed in every part, such
 was the prudent management of captains Rowley and
 Hoste, that not an individual was plundered, nor was
 any thing taken away, except what was afloat and in
 the government stores. Ninety vessels were captured.
 Vessels
 &c.
 taken
 and de-
 stroyed More than half of these were restored to the pro-
 prietors; 13, laden with oil, grain, powder, and
 merchandise, were sent to Lissa, and the remainder
 destroyed. The guns on the batteries were ren-
 dered useless, and 500 stands of arms and 200
 barrels of powder were brought off.

Cpts.
 Hoste
 and
 Mark-
 land
 at Porto
 Ré, &c. On the 5th the british squadron moved from
 Fiume to Porto-Ré; at which place captains Hoste
 and Markland landed with the marines, and found
 the forts abandoned by the enemy. The boats went
 up to Bocca-Ré, where a convoy of 13 sail had been
 scuttled; and, after rendering the guns, 10 in num-
 ber, useless, and destroying the carriages and works,
 the two captains returned to their respective ships.

Eagle
 attacks
 and de-
 stroys
 fortress
 of Fa-
 rasina. On the 7th, at 11 A.M., the Eagle attacked the
 fortress of Farasina, mounting five 18-pounders.
 After some resistance, the works were stormed and
 carried, under cover of the ship's fire, by a party of
 seamen and marines, under the command of lieutenants
 Greenaway and Hotham and lieutenant of marines
 Samuel Lloyd. The guns were disabled and the
 works laid in ruins; and at 2 P.M. the party reem-
 barked, with no greater loss than midshipman John
 Hudson slightly wounded.

Capt.
 Hoste
 lands On the 2d of August, in the evening, while the
 Eagle and Bacchante were sailing along the coast of

Istria, a convoy of 21 sail was seen at anchor in the harbour of Rovigno. Conceiving the capture of the vessels feasible, an attack was determined on; and, the Bacchante leading in, the two ships opened their fire on the batteries. After some resistance, the batteries were abandoned; whereupon captain Hoste landed with a detachment of seamen and marines, drove the enemy out of the town, disabled the guns, and destroyed or brought off the whole of the vessels; and that with so slight a loss as one marine wounded.

On the 4th of August, in the evening, the boats of the 74-gun ship Milford and brig-sloop Weasel, under captain Black of the latter, accompanied by lieutenant John Grant, and lieutenant of marines Kenyon Stevens Parker, left the Milford about seven leagues from the island of Ragosniza, and, having passed the sea-battery within pistol-shot unperceived, landed at the back of the island. At daylight on the 5th, the french troops were saluted with a cheer from the British at the top of the hill; who, quickly descending, entered the battery at the rear, where it was open, and carried it without much resistance. Six 24-pounders and two 7½-inch mortars were mounted on the battery. These were disabled, a newly erected signal tower demolished, and the seamen and marines returned on board without any loss.

On the 5th of October rear-admiral Fremantle, with the Milford, Eagle, and some smaller vessels, arrived off and blockaded the port of Triest, while a detachment of austrian troops from the main body under general count Nugent invested the town by land. On the 10th the French unexpectedly opened a masked battery of two guns upon the Milford, whose stern was towards the shore. Captain Markland in a few minutes got a spring upon the cable, and in a quarter of an hour disabled both guns, and killed two and wounded seven of the men stationed at them, while not a man was hurt on

1813. board the Milford. On the same day captain Mark-
 Oct. land landed with the marines and two field-pieces;
 and on the 11th general Nugent returned from
 Gorizia, having obliged the viceroy to pass the
 Isongo. It was then determined to lay siege to
 the castle. By the 16th the British had 12 guns in
 two batteries, which opened their fire and continued
 it nearly the whole day. Towards evening the
 French were driven from the windmill, and the
 Austrians took possession of the fort, and of two
 howitzers advanced there. The fire was continued
 with increased effect until the 29th, when colonel
 Rabie, the french commanding officer, surrendered
 on a capitulation.

 serving
 on
 shore

Captain Rowley commanded one of the batteries
 on shore, and was accompanied by lieutenants Wil-
 liam Hotham and Charles Moore, and midshipman
 Edward Hibbert. Captain Fairfax Moresby, of
 the brig-sloop Wizard, also commanded a battery,
 and, having been ordered to form another battery of
 four 32-pounders within breaching distance, he did
 so in the course of 56 hours, under every disad-
 vantage of weather, and without any other assist-
 ance than 50 men from the Milford and 20 from his
 own sloop. Mr. William Watts, acting master of
 the Wizard, and who was severely wounded, is also
 spoken highly of in the rear-admiral's despatch; as
 is likewise captain David Dunn, of the armed en-
 flûte 32-gun frigate Mermaid. Captain Markland,
 as has already been mentioned, was also on shore
 in command of the marines. The loss of the British
 on this occasion amounted to 10 seamen and marines
 killed, and 35 wounded, including Mr. Watts and a
 midshipman of the Wizard, Edward Young.

 casion.

Bac-
 chante
 and
 Saracen
 force
 passage
 by
 Castel-
 Nuova
 and
 Rosas.

On the 12th the Bacchante arrived off Ragusa,
 and was joined by the Saracen and three gun-boats,
 with a detachment of the garrison of Curzola on
 board; and, from the information of captain Harper
 and the insurrection of the Bocchese, captain Hoste
 lost no time in proceeding to Castel-Nuova. On

the 13th, in the morning, the *Bacchante* and *Saracen* forced the passage between that castle and the fort of Rosas, and, after some firing, secured a capital anchorage for the squadron about three miles above Castel-Nuova. At 10 p. m. captain Hoste detached captain Harper with the two sicilian gun-boats, the launch and barge of the *Bacchante*, and the boats of the *Saracen*, to capture the enemy's armed naval force represented to be lying between the island of St.-George and the town of Cattaro.

1813.
Sept.

On going through the passage of Cadone, the boats received a heavy but ineffectual fire from the island of St.-George; and at midnight, when within four miles of Cattaro, captain Harper found the enemy's four gun-boats in a state of revolt, and instantly took possession of them. He then landed and summoned the inhabitants, who immediately, at his request, armed en masse against the French. Having brought about this change, captain Harper hoisted the english and austrian flags on board the four captured gun-boats, and, manning them with part English, proceeded down to attack the island of St.-George. On the 13th, at 6 a. m., a heavy and well-directed fire was opened from the gun-boats under the command of lieutenant Frank Gostling of the *Bacchante*, upon the island, and returned from the batteries. In 15 minutes, however, the French were driven from their guns, and were eventually compelled to surrender at discretion. The possession of this island was of great importance, as it commands the narrow channel to the narrow branch of the river that leads up to Cattaro.

Capt.
Harper
takes
the
island
of St.-
George

On the 16th of September, at daylight, the British 18-gun brig-sloop *Swallow*, captain Edward Reynolds Sibly, being well in-shore between the river Tiber and d'Anzo, discovered a brig and xebec between herself and the latter harbour. Captain Sibly immediately despatched after them three of the *Swallow's* boats, under the orders of lieutenant Samuel Edward Cook, assisted by master's mate

Boats

zo.

1813. Thomas Cole and midshipman Henry Thomas. After
 { Sept. a row of two hours, the boats overtook, close under
 D'Anzo, the french brig Guerrier, of four guns and
 60 stands of small-arms; and, notwithstanding that
 numerous boats and two gun-vessels had been sent
 from D'Anzo to her assistance, and kept the brig in
 tow until the British were alongside, lieutenant Cook
 and his party gallantly carried her; but, in doing so,
 he sustained a loss, in his own boat, of two seamen
 killed and four severely wounded.

Edin-
 burgh
 and
 squa-
 dron
 attack
 D'An-
 zo.

On the 5th, in the morning, the 74-gun ship Edin-
 burgh, captain the honourable George Heneage
 Lawrence Dundas, 38-gun frigates *Impérieuse*, cap-
 tain the honourable Henry Duncan, and *Resistance*,
 captain Fleetwood Broughton Reynolds Pellew,
 sloops *Swallow*, *Eclair*, and *Pylades*, the two latter
 commanded by captains John Bellamy and James
 Wemyss, assembled off the port D'Anzo, where
 lay a convoy of 29 vessels, which for several days
 past had been watched by captain Duncan. The
 necessary arrangements having been made by that
 officer for the attack, captain Dundas merely added
 the force of the Edinburgh to it. The place was
 defended by two batteries, mounting two heavy guns
 each, on a mole, a tower to the northward of this
 with one gun, and a battery to the southward with
 two guns, to cover the mole.

Ships
 open
 their
 fire,
 seamen
 land,
 &c.

At 1 h. 30 m. P. M., every thing being prepared,
 the ships bore up, and took their stations as follows :
 The *Impérieuse* and *Resistance* against the mole bat-
 teries; the *Swallow* against the tower; the *Eclair* and
Pylades against the battery to the southward, and the
Edinburgh supporting the two last-named ships.
 Soon after the ships had opened their fire, which they
 did together by signal, a detachment of seamen,
 under lieutenant Eaton Travers, of the *Impérieuse*,
 and the marines under captain Thomas Mitchell,
 landed in the best order close under the southern
 battery, which lieutenant Travers instantly carried,
 driving the French in all directions: Lieutenant

David Mapleton having also taken possession of the mole-head, the convoy, 20 of which were laden with timber for the arsenal at Toulon, were brought out without any loss. Before leaving the place, the British blew up all the works; and the ships received no greater injury than a few shot in their hulls and some damaged rigging. It appears that captain Duncan had gained some very material information respecting the strength of D'Anzo by a gallant exploit performed a few nights previously by lieutenant Travers; who, at the head of a single boat's crew, stormed, carried, and destroyed, a tower mounting one gun, and brought off the guard as prisoners.

1813.
Oct.

A large
convoy
taken.

Gallant
exploit
of lieut.
Tra-
vers.

On the 14th of October, at 1 P. M., the 36-gun frigate *Furieuse*, running along the coast towards the island of Ponza, observed, in the harbour of Marinello, situated about six miles to the eastward of Civita-Vecchia, a convoy of 19 vessels, protected by two gun-boats, a fort of two long 24-pounders, and a strong fortified tower and castle. It appearing practicable to cut them out, lieutenants Walter Croker and William Lester, and lieutenants of marines James Whylock and William Davis, gallantly volunteered to storm the fort on the land side, while the frigate anchored before it. This service was promptly executed; and, after a few broadsides from the *Furieuse*, the battery was carried, and the guns spiked, by the party on shore.

Furi-
euse
attacks
batter-
ies at
Mari-
nello.

The french troops retreated to the strong position of the castle and tower overlooking the harbour; whence they kept up a constant fire of musketry through loopholes, without the possibility of being dislodged, although the *Furieuse* weighed and moved in, so that the whole fire of the ship was directed upon it. Nothing could damp the ardour of the party on shore, who, together with lieutenant Lester in the boats, lost not a moment in boarding and cutting the cables of 16 vessels under a most galling fire. Two of the vessels sank at the entrance of the

Boats
capture
a large
convoy

1813. harbour, but the remaining 14, deeply laden, were
 Nov. brought out. The loss to the British in performing this
 service, which was over in three hours, amounted to
 two men killed and 10 wounded.

Boats of Revenge cut out a privateer from Palamos.
 On the 8th of November, at 8 h. 30 m. p. m., the
 boats of the 74-gun ship *Revenge*, captain sir John
 Gore, under the orders of lieutenant William
 Richards, assisted by lieutenant Thomas Blakiston,
 captain of marines John Spurin, and master's mates
 and midshipmen Thomas Quelch, William Rolfe,
 Henry Fisher, Benjamin Mainwaring, John Harwood,
 Valentine Munbee, George Fraser, Robert Maxwell,
 Charles M. D. Buchanan, and John P. Davey,
 were sent into the harbour of Palamos, to en-
 deavour to cut out a french felucca privateer.
 At 11 p. m. lieutenant Richards and his party boarded
 and carried the privateer, without having a man
 hurt, and by 1 a. m. on the 9th had brought her
 alongside the *Revenge*.

Boats of Undaunted and Guadeloupe cut out vessels from Port-Nouvelle.
 On the 9th captain Ussher sent the boats of the
Undaunted, under the orders of lieutenant Joseph
 Robert Hownam, assisted by lieutenant Thomas
 Hastings and lieutenant of marines Harry Hunt,
 also the boats of the *Guadeloupe* brig, under lieu-
 tenant George Hurst and Mr. Alexander Lewis the
 master, into Port-Nouvelle. The batteries were
 stormed and carried in the most gallant manner, and
 two vessels captured and five destroyed, without a
 casualty.

Boats of Swiftsure board and carry Charlemagne.
 On the 26th of November, off Cape Rousse,
 island of Corsica, the boats of the british 74-gun ship
Swiftsure, captain Edward Stirling Dickson, under
 the orders of lieutenant William Smith, the 4th, were
 detached in pursuit of the french privateer schooner
Charlemagne, of eight guns and 93 men, who was
 using every exertion by sweeping to effect her
 escape. On the approach of the boats, the privateer
 made every preparation for resistance, and reserved
 her fire till the boats had opened theirs; when the
 schooner returned it in the most determined manner

for some minutes, until the boats got close alongside. 1813. The British then boarded the Charlemagne on the bow and quarter and instantly carried her; but not without a serious loss, having had one midshipman (Joseph Douglas) and four seamen killed, and two lieutenants (Rose Henry Fuller and John Harvey, the latter mortally,) one lieutenant of marines, (James Robert Thompson,) one midshipman, (— Field,) and 11 seamen wounded.

Loss on the occasion.

On the 25th of November, 1812, the two new french 40-gun frigates Aréthuse, commodore Pierre-François-Henry-Étienne Bouvet, and Rubis, captain Louis-François Ollivier, sailed from Nantes on a cruise. In January these two frigates, accompanied by a portuguese prize-ship, the Serra, steered for the coast of Africa, and on the 27th, when off Tamara, one of the Isles de Los, the Rubis, who was ahead, discovered and chased a brig, which was the british gun-brig Daring, lieutenant William R. Pascoe. The latter, when at a great distance, taking the Rubis for an english frigate, sent his master in a boat to board her. On approaching near, the boat discovered her mistake and endeavoured to make off; but was captured. The Daring was now aware of her perilous situation, and crowded sail for Tamara, followed by the Rubis; whom the lightness of the breeze delayed so much, that the brig succeeded in running on shore and her crew in setting her on fire. The two french frigates, at 6 P. M., came to an anchor in the road of Isle de Los. Here captain Bouvet learnt, that Sierra-Leone was the rendezvous of two british frigates and several sloops of war; that one of the former had recently quitted the coast, and that the remaining frigate, reported to him as larger and stronger than either of his own, still lay at anchor in the river.

Aréthuse and Rubis chase Daring on shore.

Anchor at Isle de Los.

In the course of six days, the french commodore refitted his ships, and supplied them with water and provisions for six months. Having also sent to Sierra-Leone to exchange the few prisoners in his

Sail again.

1813. possession, consisting, besides the boat's crew of the
 Jan. Daring, of the master and crew of a merchantman
 he had taken, captain Bouvet, on the 4th, weighed
 and made sail with his two frigates. At 4 p. m. the
 Aréthuse, who was ahead, struck on a coral bank,
 but, forcing all sail, got off immediately, with no
 greater damage than the loss of her rudder. The
 two frigates then reanchored, but, driving in a gale
 of wind, were obliged, at 3 A. M. on the 5th, to get
 under sail; the Aréthuse contriving a temporary
 rudder while her own was repairing.

Rubis is lost on the rocks. At daylight, when the gale had abated, the Aré-
 thuse found herself lying becalmed within four
 leagues north-east of the island of Tamara; and cap-
 tain Bouvet was surprised to discover his consort
 still among the islands, covered with signals, which
 the distance precluded him from making out, but
 which were judged to be of melancholy presage.
 At 8 A. M. the Aréthuse anchored in 12 fathoms. At
 11 A. M. the Rubis was observed to fire several guns,
 and at noon to have the signal flying, that the pumps
 were insufficient to free her. Captain Bouvet im-
 mediately sent his longboat with two pumps; but
 at 2 A. M. on the 6th the officer returned, with inform-
 ation that the Rubis had struck on the rocks, and
 that her crew were removing to the portuguese ship.
 At daylight, by which time she had repaired and re-
 shipped her rudder, the Aréthuse discovered a large
 ship to-windward. This was the british 38-gun
 frigate Amelia, captain the honourable Frederick
 Paul Irby, from Sierra-Leone.

Lient. Pascoe joins Amelia at Si-erra-Leone. It was at 3 h. 30 m. P. M. on the 29th of January,
 that lieutenant Pascoe and a part of his crew joined
 the Amelia, then moored off Free-Town, Sierra-
 Leone, bringing information, that he had left "three
 french frigates" at anchor in Isle de Los road. The
 Amelia began immediately to bend sails and clear
 for action, and in the evening was joined by the
 Hawk merchant schooner, with some more of the
 Daring's men. On the morning of the 30th the

Amelia's launch-carronade was put on board the Hawk, and lieutenant Pascoe, having volunteered, was despatched in her to reconnoitre the french ships. 1813.
Feb.

On the 2d of February, at noon, lieutenant Pascoe returned, with intelligence of the names of the two french frigates and their prize; and also of captain Bouvet's intention to proceed immediately to sea, to intercept the british homeward-bound trade. On the 3d, at 8 A. M., the cartel-cutter, noticed as having been despatched by captain Bouvet, arrived with prisoners, including the crew of the Daring's boat; and at 10 h. 30 m. the Amelia, with a debilitated crew, for whose recovery she was about to proceed to England, got under way, and made sail, against a west-south-west wind, for the Isles de Los, in the hope of falling in with some british cruiser that might render the match more equal, and prevent the two french frigates from molesting several merchant vessels that were daily expected at Sierra-Leone. Amelia
sails in
quest of
french
fri-
gates.

On the 5th, at 8 A. M., the Amelia got a sight of Isle de Los; and at 8 P. M., when standing to the north-east, and then distant three leagues west-north-west of Tamara, she observed a strange sail in the north-east, or right ahead, making night-signals. Supposing this vessel to be one of the french frigates, the Amelia tacked to the westward, the wind now blowing fresh from the north-west. On the 6th, at daylight, the Amelia again tacked to the north-east, and at 9 A. M. spoke the Princess-Charlotte government-schooner from Sierra-Leone, the vessel that had been making signals the preceding night. At 9 h. 30 m. A. M. the french ships were observed in the north-east, at anchor off the north end of Tamara; one, the Aréthuse, considerably to the northward of the other, who appeared to be unloading the prize, but was really removing into the latter her own crew. At 10 A. M. captain Irby despatched the Princess-Charlotte to Sierra-Leone, with directions for any british ship of war that might arrive there Disco-

parate
her
from
her
consort

At 2 h. 30 m. P. M. the two french frigates were observed to interchange signals; and at 3 h. 20 m. the Aréthuse weighed and made sail on the starboard tack, with a moderate breeze at south-south-west. The Amelia thereupon shortened sail, and hauled to the wind on the same tack as the Aréthuse. In a few minutes the latter tacked to the westward, to avoid a shoal, and the Amelia did the same. At 6 P. M. the Aréthuse bore from the Amelia north-north-east distant six miles; at which time the Rubis, as supposed, but probably the Serra, was observed to have her topsails hoisted. At 6 h. 30 m. P. M. the north end of Tamara bore from the Amelia east-south-east distant five leagues. At 8 P. M. the Amelia lost sight of the Aréthuse; and at 8 h. 30 m., in order to keep off shore during the night, captain Irby tacked to the south-south-west, with the wind now from the westward. At 6. h. 45 m. A. M. on the 7th the Amelia discovered the Aréthuse about eight miles off in the south-east; but a calm, which came on at 8 A. M., kept both frigates stationary. At noon a light breeze sprang up from the west-north-west: whereupon the Aréthuse stood towards the Amelia, on the larboard tack, under all sail; the latter making sail also, in the hope to draw the Aréthuse from her consort, still supposed to be in a condition to follow and assist her.

The
two
ships
ma-
nœuvre
and the
action
com-
mences

At 5 P. M., finding the wind beginning to fall, and conceiving that he had drawn the Aréthuse to a sufficient distance from her consort, captain Irby shortened sail, wore round, and, running under his three topsails with the wind on the starboard quarter, steered to pass, and then to cross the stern of, the Aréthuse; who was standing, under the same sail, close hauled on the larboard tack. To avoid being thus raked, captain Bouvet, at 7 h. 20 m. P. M., tacked to the south-west, and hoisted his colours; as the Amelia previously had hers. It was

now a fine moonlight night, with the wind very moderate, and the sea nearly as smooth as a millpond. At 7 h. 45 m., just as the Amelia had arrived within pistol-shot upon her starboard or weather bow, the Aréthuse opened her fire; which was immediately returned. After about three broadsides had been exchanged, the main topsail of the Amelia, in consequence of the braces having been shot away, fell aback. Owing to this accident, instead of crossing her opponent as she intended, the Amelia fell on board of her; the jib-boom of the Aréthuse carrying away the Amelia's jib and stay, and the french ship's bumpkin or anchor-floek, part of the british ship's larboard forecastle barricade.

1813.
Feb.

Amelia
falls on
board
Aré-
thuse.

The Aréthuse now opened a heavy fire of musketry from her tops and mast-heads, and threw several hand-grenades upon the Amelia's decks, hoping, in the confusion caused by such combustibles, to succeed in an attempt to board; for which purpose several of the Aréthuse's men had stationed themselves in her fore rigging. A man was now seen on the spritsail yard of the Aréthuse, making strenuous efforts to get on board the Amelia. Scarcely had the poor fellow called out, "For God's sake! don't fire, I am not armed," when a musket-ball from a british marine dropped him in the water. It was afterwards ascertained, that one of the crew of the Aréthuse, a Hamburger, had formerly belonged to the Amelia, having been taken out of one of her prizes on the coast of Spain and forced to enter on board the french frigate. It appears that the man was so desirous to get back to his ship, that he requested a settler at the Isle de Los to secrete him till an opportunity offered of his reaching Sierra-Leone. The probability therefore is, that the man, so shot, while upon the spritsail yard of the Aréthuse, was the unfortunate Hamburger.

Anec-
dote of
a Ham-
burg-
her on
board
Aré-
thuse.

Finding that, owing in a great degree to the steady and well-directed fire kept up by the Amelia's marines, her object could not be accomplished,

1813. the Aréthuse threw all aback and dropped clear.
 Feb. In doing this, her spritsail yard knocked lieutenant
 William Reeve, who had been invalided from the
 Kangaroo sloop, from the break of the fore-castle
 into the waist. Setting her main topgallant and
 middle staysails, (her jib for the time being dis-
 abled,) the Amelia endeavoured again to get her
 head towards the bow of the Aréthuse. The Amelia
 at length did so, but, in attempting a second time
 to cross her antagonist, a second time fell on board
 of her; and the two ships now swang close along-
 side, the muzzles of their guns almost touching.
 This was at about 9 h. 15 m. p. m., and a scene of
 great mutual slaughter ensued. The two crews
 snatched the sponges out of each other's hands
 through the portholes, and cut at one another with
 the broadsword. The Amelia's men now attempted
 to lash the two frigates together, but were unable,
 on account of the heavy fire of musketry kept up
 from the Aréthuse's decks and tops; a fire that
 soon nearly cleared the Amelia's quarterdeck of
 both officers and men. Among those who fell on
 the occasion were the first and second lieutenants,
 (John James Bates and John Pope,) and a lieu-
 tenant of marines. Captain Irby was also severely
 wounded, and obliged to leave the deck to the com-
 mand of the third lieutenant, George Wells; who,
 shortly afterwards, was killed at his post, and Mr.
 Anthony De Mayne, the master, took the command.
 The mutual concussion of the guns at length
 forced the two frigates apart; and, in the almost
 calm state of the weather, they gradually receded
 from each other, with, however, their broadsides still
 mutually bearing, until 11 h. 20 m. p. m.; when both
 combatants, being out of gun-shot, ceased firing.
 Each captain thus describes this crisis. Captain
 Irby says: "When she (the Aréthuse) bore up,
 having the advantage of being able to do so, leaving
 us in an ungovernable state, &c." Captain Bouvet
 says: "At eleven o'clock the fire ceased on both

sides; we were no longer within fair gun-shot, and the enemy, crowding sail, abandoned to us the field of battle."—"A onze heures, le feu cessa de part et d'autre; nous n'étions plus à bonne portée, et l'ennemi se couvrit de voiles, nous abandonnant le champ de bataille."* 1813.
Feb.

The damages of the *Amelia*, although, chiefly on account of the smooth state of the sea, they did not include a single fallen spar, were very serious; the frigate's masts and yards being all badly wounded, her rigging of every sort cut to pieces, and her hull much shattered. But her loss of men will best show how much the *Amelia* had suffered. Of her proper crew of 265 men, and 30 (including, as if 18 were not already enough, 12 established supernumerary) boys, and her 54 supernumerary men and boys, composed chiefly of the *Daring's* crew, the *Amelia* had her three lieutenants, (already named,) second lieutenant of marines, (Robert G. Grainger,) lieutenant Pascoe, late commander of the *Daring*, one midshipman, (Charles Kennicott,) the purser of the *Thais*, (John Bogue, of his second wound,) 29 seamen, seven marines, and three boys killed, her captain, (severely,) lieutenant Reeve, invalided from the *Kangaroo* sloop, the master, (already named,) first lieutenant of marines, (John Simpson,) purser, (John Collman,) boatswain, (John Parkinson, dangerously,) one master's mate, (Edward Robinson,) four midshipmen, (George Albert Rix, Thomas D. Buckle, George Thomas Gooch, and Arthur Beever,) 56 seamen, (two mortally,) 25 marines, (three mortally,) and three boys wounded; total, 51 killed and died of their wounds, and 90 wounded, dangerously, severely, and slightly.

The *Aréthuse*, as well as her opponent, left off action with her masts standing; but they were all

Same

board
Aré-
thuse.

* Mon. April 29. An english translator of captain Bouvet's letter has rendered "Nous n'étions plus à bonne portée" by "We were no longer in good condition." See *Naval Chronicle*, vol. xxix. p. 385.

1813. more or less wounded, and her rigging was much
Feb. cut. Her hull must also have suffered considerably ;
as her acknowledged loss, out of a crew, including
the boat's crew of the Rubis, of at least 340 men and
boys, amounted to 31 killed, including 11 of her
officers, and 74 wounded, including nearly the whole
of her remaining officers.

Guns, &c. of the two ships. The guns of the Amelia (late french Proserpine*) were the same as those mounted by the Java, with an additional pair of 32-pounder carronades, or 48 guns in all. The guns of the Aréthuse were the same, in number and caliber, as the Java mounted when captured as the french Renommée.† Although the total of men and boys on board the Amelia would be 349, yet, if we are to allow for the number of her men that were unable to attend their quarters, and for the feeble state of many of the remainder, among whom, including the Daring's, there were nearly 40 boys, 300 will be an ample allowance. The Aréthuse has been represented to have had a crew of 375 or 380 men, but we do not believe she had a man more of her proper crew than 330 ; making, with the boat's crew of the Rubis, 340. The Aréthuse was the sister-frigate of the Renommée : consequently the tonnage of the Java will suffice.

COMPARATIVE FORCE OF THE COMBATANTS.

marks
on the
action.

Here was a long and bloody action between two (taking guns and men together) nearly equal opponents, which gave a victory to neither. Each combatant withdrew exhausted from the fight ; and each, as is usual in the few cases of drawn battles that have occurred, claimed the merit of having forced the other to the measure. But it

* See vol. i. p. 174.

† See p. 31.

must now be clear, from the Amelia's damaged state, ^{1813.} that captain Bouvet was mistaken when he said, that ^{Feb.} she crowded sail to get away : it is much more probable, as requiring no other effort than shifting the helm, that the Aréthuse, as captain Irby states, bore up.

Viewing the relative effectiveness of the two crews, one debilitated by sickness, the other, as admitted, in the full vigour of health ; considering that, although both frigates sustained an almost unparalleled loss of officers, the captain of one of them only was obliged to give up the command ; considering, also, the difference in the numerical loss, 141 and 105, a difference mainly attributable, no doubt, to the fatigued state of the Amelia's crew at the latter part of the action ; we should say, that the Aréthuse, had she persevered, or could she, being to-leeward, have done so, would, in all probability, have taken the british frigate. In saying this, we are far from placing every french 40-gun frigate upon a par with the Aréthuse : she was excellently manned, and was commanded by one of the best officers in the french navy. The chief part of the crew of the Aréthuse may, it is true, have been conscripts ; but, then, they were the conscripts of the year 1807, and were under an officer capable, if any officer was so, of making them good seamen.

With respect to captain Irby, his critical situation, without reference to the state of his crew, must not be overlooked. The Amelia commenced, gallantly commenced, the action, under the impression that another french frigate, also equal in force to herself, was, although out of sight, at no great distance off. If, then, there was a probability of the approach of the Rubis when the action began, how must that probability have been heightened after the action had lasted three hours and a half, both ships remaining nearly stationary the whole time, and the wind, when it afterwards sprang up, drawing from the eastward, the direction in which the Rubis had been last seen?

1813. In addition to all this, the *Amelia* had on board a considerable quantity of gold dust, belonging to merchants in England. Upon the whole, therefore, both frigates behaved most bravely; and, although he had no trophy to show, each captain did more to support the character of his nation, than many an officer who has been decorated with the chaplet of victory.

A hint
to the
Ameri-
cans.

Previously to quitting the action of the *Amelia* and *Aréthuse*, we would request the boasters in the United States of America to compare the execution here done by an 18-pounder french frigate, with the best performance of one of their huge 24-pounder frigates; bearing in mind, that it was done against an opponent, not only equal to herself in force, but equally able to manœuvre by the possession of her masts; that it was done in a fair side-to-side action, neither frigate, during the three hours and a half's engagement, having had an opportunity to give one raking fire. It will, no doubt, also strike commodores Decatur and Bainbridge, that, so far from constantly evading the close assaults of his antagonist, captain Bouvet remained nearly in the same position from the commencement of the battle to its termination.

Amelia
sails
for
Eng-
land.

Both frigates found ample employment, during the remainder of the night, in clearing their decks of dead and wounded, and in securing their damaged masts. At daylight on the 8th they were about five miles apart, the *Aréthuse* to the eastward of the *Amelia*, and both nearly becalmed. On a light breeze springing up, the *Amelia*, having bent a new foresail and fore topsail, made sail before it to the southward, on her way to Madeira and England; and the *Aréthuse* stood back to Isle de Los, to see what had become of captain Ollivier and his people. On the morning of the 10th the *Aréthuse* was joined by the *Serra*, with the late crew of the *Rubis*, stated then to consist of 300 men.

Taking half the number on board his frigate, captain Bouvet, with the *Serra* in tow, steered for

France. On reaching the latitude of Madeira, however, captain Bouvet removed every man out of the *Serra*, and destroyed her, as she retarded the *Aréthuse* in her voyage. On the 18th of March, in latitude 33° 30' north, longitude 40° west, the french frigate fell in with and boarded the *Mercury* and another cartel, having on board the surviving officers and crew of the late british frigate *Java*; and on the 19th of April, after having made in the whole about 15 prizes, the *Aréthuse* anchored in Saint-Malo; as on the 22d of the preceding month had the *Amelia* at Spithead.

1813.

Aréthuse sails for France and arrives at St.-Malo.

Another pair of french 40-gun frigates had been nearly the same route as the *Aréthuse* and *Rubis*, but, during a two months and a half's cruise, had not encountered a single hostile vessel of war. The *Hortense* and *Elbe*, captains Pierre-Nicolas Lahalle and Jules Desrostours, sailed from Bordeaux on the 7th of December, 1812; and, steering for the coast of Africa, anchored on the 4th of January between the *Bissagot* islands, a little to the northward of *Sierra-Leone*. They sailed soon afterwards, cruised a short time off the *Azores*, and on the 15th of February succeeded in entering *Brest*.

Cruise of *Hortense* and *Elbe*.

While, in the early part of December, 1812, the United States' frigate *Constitution*, commodore Bainbridge, and ship-sloop *Hornet*, of eighteen 32-pounder carronades and two long 12-pounders, captain James Lawrence, were waiting at *St.-Salvador* to be joined by the *Essex*,* an occurrence happened, which the characteristic cunning of Americans turned greatly to their advantage. In the middle of November the british 20-gun ship *Bonne-Citoyenne*, of eighteen 32-pounder carronades and two long 9-pounders, captain Pitt Barnaby Greene, having, while coming from *Rio-de-la-Plata*, with half a million sterling on board, damaged herself greatly by running on shore, entered the port of *St.-Salvador*, to land her cargo and be hove down.

Bonne-Citoyenne arrives at *St.-Salvador* and is hove down.

* See p. 199.

1813. When the ship was keel-out, the two american
 March. ships arrived in the port. The american consul and
 Chal- the two american commanders now laid their heads
 lenge together, to contrive something which, without per-
 from sonal risk to any one of the three, should contribute
 captain to the renown of their common country. What so
 Law- likely as a challenge to captain Greene? It could
 rence not be accepted; and then the refusal would be as
 to cap- good as a victory to captain Lawrence. Accordingly,
 tain a challenge for the Hornet to meet the Bonne-Citoy-
 Greene enne was offered by captain Lawrence, through the
 american consul, to the british consul, Mr. Frederick
 Landeman; commodore Bainbridge pledging his
 honour to be out of the way, or not to interfere.

Capt. Without making the unpleasant avowal, that his
 Greene government, upon this occasion, had reduced the ves-
 refuses sel he commanded from a king's cruiser to a merchant
 the ship, captain Greene transmitted, through the con-
 terms. sular channel, an animated reply; refusing a meeting,
 "upon terms so manifestly disadvantageous as those
 proposed by commodore Bainbridge." Indeed, it
 would appear, as if the commodore had purposely
 inserted the words, "or not interfering," lest cap-
 tain Greene, contrary to his expectation, should
 accept the challenge. For, had the two ships met
 by agreement, engaged, the Constitution looked
 on without interfering, and the british ship been
 the conqueror, the pledge of honour, on the part
 of both american commanders, would have been
 fulfilled; and can any one for a moment imagine,
 that commodore Bainbridge would have seen the
 Bonne-Citoyenne carry off a United States' ship of
 war, without attempting her rescue? It was more
 than his head was worth. Where was the guarantee
 against recapture, which always accompanies a
 serious proposal of this sort, when a stronger force
 belonging to either party, is to preserve a temporary
 neutrality? The bait, therefore, did not take: the
 specie remained safe; and the american officer
 were obliged to content themselves with all th

Their
 absur-
 dity
 shown.

benefit they could reap from making a boast of the circumstance. This they did; and, to the present hour, the refusal of the Bonne-Citoyenne to meet the Hornet stands recorded in the american naval archives, as a proof of the former's dread, although the "superior in force," of engaging the latter. The two ships, as has just been seen, were equal in guns, and not very unequal in crews; the Hornet having 171 men and two boys, the Bonne-Citoyenne, including 21 supernumeraries, 141 men and nine boys. But this inferiority was in a great degree compensated, by the pains which captain Greene had taken, to teach his men the use of their guns.

1813.
Feb.

After the Constitution had sailed for Boston as already stated,* the Hornet continued blockading the Bonne-Citoyenne and her dollars, until the arrival, on the 24th of January, of the british 74-gun ship Montagu, captain Manley Hall Dixon, bearing the flag of rear-admiral Manley Dixon. The american sloop, on being chased, ran for the harbour; but, night coming on, the Hornet wore, and, by standing to the southward, dexterously evaded her pursuer. Escorted by the Montagu, the Bonne-Citoyenne, with her valuable cargo on board, put to sea on the 26th of January; and on the 22d of February, in latitude 5° 20' south, longitude 40° west, the rear-admiral left captain Greene to pursue his voyage alone. Sometime in the month of April, having stopped at Madeira by the way, the Bonne-Citoyenne arrived in safety at Portsmouth.

Hornet is chased from St. Salvador by Montagu 74

Bonne-Citoyenne arrives in England.

After escaping from the Montagu, the Hornet hauled her wind to the westward, and on the 14th of February, when cruising off Pernambuco, captured an english brig, with about 23000 dollars in specie on board. Having removed the money and destroyed the prize, captain Lawrence cruised off Surinam until the 22d; then stood for Demerara, and on the 24th chased a brig, but was obliged to haul off on account of the shoals at the entrance of Demarara

Hornet discovered Es- piègle at anchor, refitting.

At 3 h. 30 m. p. m., while beating round Caroband bank to get at the *Espiègle*, the *Hornet* discovered a sail on her weather quarter bearing down for her. This was the british brig-sloop *Peacock*, of sixteen 24-pounder carronades and two sixes, captain William Peake; who had only sailed from the *Espiègle*'s anchorage the same day at 10 a. m. At 4 h. 20 m. p. m. the *Peacock* hoisted her colours; and at 5 h. 10 m., having kept close to the wind to weather the *Peacock*, the *Hornet* tacked for that purpose and hoisted her colours. At 5 h. 25 m., in passing each other on opposite tacks, within half pistol-shot, the ship and brig exchanged broadsides. After this, the *Peacock* wore to renew the action on the other tack; when the *Hornet*, quickly bearing up, received the *Peacock*'s starboard broadside; then, at about 5 h. 35 m., ran the latter close on board on the starboard quarter. In this position, the *Hornet* poured in so heavy and well-directed a fire, that at 5 h. 50 m., having had her commander killed, and being with six feet water in the hold and cut to pieces in hull and masts, the *Peacock* hoisted from her fore rigging an ensign, union down, as a signal of distress. Shortly afterwards her mainmast went by the board.

Both the *Hornet* and *Peacock* were immediately anchored; and every attempt was made to save the latter, by throwing her guns overboard, by pumping and bailing her, and stopping such shot-holes as could be got at; but all would not do, and in a very few minutes after she had anchored, the *Peacock* went down in five and a half fathoms' water, with 13 of her men, four of whom afterwards got to the fore top and escaped, as well as three men belonging to the *Hornet*. An american lieutenant and midshipman, and the remainder of the *Hornet*'s men on board the *Peacock*, with difficulty saved themselves by

jumping, as the brig went down, into a boat which was lying on her booms. Four of the Peacock's seamen had just before taken to her stern boat; in which, notwithstanding it was much damaged by shot, they arrived in safety at Demerara. 1813.
Feb.

Of her 110 men and 12 boys, the Peacock lost, about the middle of the action, her young and gallant commander and four seamen killed, her master, one midshipman, the carpenter, captain's clerk, and 29 seamen and marines wounded; three of the latter mortally, but the greater part slightly. The principal damages of the Hornet are represented to have been one shot through the foremast, and her bowsprit slightly wounded by another: her loss, out of a crew of 163 men and two boys, the Americans state at one seaman killed, and two slightly wounded; also one mortally, and another severely burnt by the explosion of a cartridge. Loss,
&c. on
each
side.

The Hornet had three lieutenants, a lieutenant of marines, and a great show of full grown young midshipmen; and her men were all of the usual class of "american" seamen. Her established complement was 170, but she had on board, as was frequently the case in american ships of war, three supernumeraries. On the other hand, eight men were absent in a prize. This reduced the Hornet's crew to 165; among whom we will suppose, although none were discoverable, there were three boys. The Hornet, it will be observed, mounted one gun more of a side than the Wasp, and the latter was 434 tons: the former, therefore, could not well have been less than 460 or 470 tons. Hornet's

This is what the Americans, now for the first time pretending to believe, that "24-pounders are as

1813, Feb², good as 32s," call an equal match; or rather, as a brass swivel or two were stuck upon the capstan, or somewhere about the quarterdeck, of the Peacock, by way of ornament, these and the boat-carronade were reckoned in, and the Hornet was declared to have gained a victory over a superior british force.

If, in their encounter of british frigates, the Americans were so lucky as to meet them with crippled masts, deteriorated powder, unskillful gunners, or worthless crews, they were not less fortunate in the brigs they fell in with. There was the Frolic, with her main yard gone and topmasts sprung; and here is the Peacock, with 24 instead of 32 pounder carronades, the establishment of her class, and with a crew that, owing to the nature of their employment ever since the brig had been commissioned, in August, 1807, must have almost forgotten that they belonged to a man of war.

The Peacock had long been the admiration of her numerous visitors, for the tasteful arrangement of her deck, and had obtained, in consequence, the name of the yacht. The breechings of the carronades were lined with white canvass, the shot-lockers shifted from their usual places, and nothing could exceed in brilliancy the polish upon the traversing bars and elevating screws. If carronades, in general, as mounted in the british service, are liable to turn in-board or upset, what must have been the state of the Peacock's carronades after the first broadside? A single discharge from them, in exercise, would have betrayed the very defective state of their fastenings; and the feelings of Englishmen might then have found some relief in the skill, as well as gallantry, evinced in the Peacock's defence. The firing of the Hornet was admirable, and proved that her men, to the credit of captain Lawrence and his officers, had been well taught what use to make of their guns: at the same time, it must be admitted, that the Peacock, Frolic, and all the brigs of their class were mere shells; especially, when compared with such a ship as the Hornet,

ry of
Hornet.

whose scantling was nearly as stout as that of a ^{1813.} british 12-pounder frigate.

The wreck of the Peacock was visible for a long time after the action, and bore from Point Spirit, which is about six miles to the eastward of the entrance to Demerara river, north-east by east distant six leagues; making the distance between the Espiègle and Peacock, during the action, nearly 24 miles. This confirms the statement of lieutenant Frederick Augustus Wright, the late senior lieutenant of the Peacock, that the Espiègle "was not visible from the look-outs stationed at the Peacock's mast-heads for some time previous to the commencement of the action, and gives rather an awkward appearance to captain Lawrence's statement, that the Espiègle lay about six miles in-shore of him, and "could plainly see the whole of the action." If another confirmation were wanted, it is to be found in the log of the Espiègle; by which it appears that, although pieces of wreck passed her on the morning of the 25th, captain Taylor did not know that an action had taken place, until informed, the same afternoon, by the governor of Demerara, of the Peacock's destruction.

It was fortunate, perhaps, for the character of the british navy, that the disordered state of her rigging prevented the Espiègle from sailing out to engage the ship, which, at noon on the day of action, she plainly saw, and continued to see for nearly an hour, until the Hornet tacked and stood to the south-east; as, at the court-martial subsequently held upon him, captain Taylor was found guilty of having "neglected to exercise the ship's company at the great guns." It seemed hard, however, to punish the Espiègle's commander for a piece of neglect, which prevailed over two thirds of the british navy; and to which the admiralty, by their sparing allowance of powder and shot for practice at the guns, were in some degree instrumental.

Capt.
Bren-
ton's
error
re-
spect-
ing Pea-
cock's
force.

Much good as, we flatter ourselves, we have done to the cause of truth, by analyzing the american accounts of their naval actions with the English, the inattention of a contemporary may throw some doubt upon the accuracy of our statement respecting the relative force of the parties in the case that has just been detailed. Captain Brenton, with a particularity not common with him, states that "the force of the Peacock was sixteen 32-pound carronades and two long sixes."* Admitting that neither our former work on the subject published nine years ago, nor the first edition of the present work, and into which, we know, our contemporary has occasionally dipped, was deemed of sufficient authority, what has captain Brenton to say to lieutenant Wright's letter, published in all the London papers? Nay, what objection has he to offer to the official statement of captain Lawrence himself, "She (the Peacock) mounted sixteen 24-pound carronades and two long nines?"

Its pro-
bable
effect
in Ame-
rica.

The counter statement of our contemporary, it is true, may have little weight in this country; but not so in the United States, not so among a people whom we are, and long have been, labouring so hard to convince of the inutility, even in a profit-and-loss point of view, of telling a falsehood. There the high rank and presumed practical experience of the author, and his long list of kings, princes, *princesses*, dukes, and officers of the navy, for subscribers, will produce their full effect: the Americans will be convinced that, in the hurry of the moment, captain Lawrence made a mistake respecting the force of his prize. By the by, captain Brenton is not the only british officer, who has given the Peacock 32-pounder carronades: a post-captain, who, about 18 months ago, volunteered to correct the mistatements of a very captivating writer, both for and against the Ame-

* Brenton, vol. v. p. 111.

ricans, did the same. That the established armament of the Peacock's class was 32-pounders, there cannot be a doubt; any more than that the brig, being new and built of oak, was well able to bear them. But captain Peake probably considered that 24-pounders gave a lighter appearance to his deck, and took up less room. We know not what other reason to assign for the change.

We left in the port of Boston the three american frigates Constitution,* President, and Congress,† A fourth, the 36-gun frigate Chesapeake, captain Samuel Evans, sailed from Boston on the 17th of December, 1812; ran down past Madeira, the Canaries, and Cape-de-Verds; thence on the equator between longitudes 16° and 25°, where the american frigate cruised six weeks. The Chesapeake afterwards steered for the coast of South America, and, passing within 15 leagues of Surinam, was on the same spot on which the Hornet had, the day previous, sunk the Peacock. The frigate then cruised off Barbadoes and Antigua, and, steering homewards, passed between Bermuda and the Capes of Virginia. Standing to the northward, the Chesapeake passed within 12 leagues of the Capes of Delaware and 20 of New-York, and on the 18th of April, 1813, re-entered Boston by the eastern channel; having, during her 115 days' cruise, recaptured one merchant vessel and captured four, been chased by a british 74 and frigate, and chased on her part, for two days, a british brig-sloop.

Among the captains of british 38-gun frigates who longed, ardently longed, for a meeting with one of the american 44s, was captain Philip Bowes Vere Broke, of the Shannon. This desire was not founded on any wish for a display of personal valour, but in order to show to the world, what apparent wonders could be effected, where the ship and the crew were in all respects fitted for battle. It was not since the

1813. late american war, that captain Broke had begun to
 March. put his frigate in fighting order, and to teach his men
 the art of attack and defence. From the day on which
 captain Broke had joined her, the 14th of September,
 1806, the Shannon began to feel the influence of her
 captain's proficiency as a gunner and zeal for the
 service.

Capt. The laying of a ship's ordnance, so that it may be
 Broke's correctly fired in a horizontal direction, is justly deemed
 atten- a most important operation; as upon it depends, in a
 tion to great measure, the true aim and destructive effect of
 laying his ord- every future shot she may fire. On board the Shannon,
 nance, at her first outfit, this was attended to by captain
 Broke in person; and his ingenious mode of laying
 ships' ordnance has since received the highest com-
 mendation. By draughts from other ships, and the
 usual means to which a british man of war is obliged
 to resort, the Shannon got together a crew; and, in
 State the course of a year or two, by the paternal care
 of his and excellent regulations of captain Broke, an under-
 crew. sized, not very well disposed, and, in point of age,
 rather motley, ship's company became as pleasant
 to command, as they would have been dangerous to
 meet. In August, 1811, the Shannon sailed for the
 coast of North America; and, had this frigate, in the
 excellent order in which she was kept, met the
 Constitution in August, 1812, we verily believe —
 But the Shannon and Constitution did not meet;
 therefore the thing was not tried.

Shan- On the 21st of March, 1813, accompanied by the
 non Tenedos, of the same force, and kept in nearly the
 and same order, captain Hyde Parker, the Shannon
 Tene- sailed from Halifax on a cruise in Boston bay. On
 dos the 2d of April the two frigates reconnoitred the
 cruise in harbour of Boston, and saw the President and
 in Congress, the latter quite, and the former nearly,
 Boston ready for sea. The Constitution was at this time
 bay to undergoing a large repair; and her decks were being
 intercept lowered, to render her more snug, and give her a
 Presi- smaller and more inviting appearance. Captains
 dent and
 Con-
 gress.

Broke and Parker having resolved, if in their power, ^{1813.} to bring the President and Congress to action, the ^{May} Shannon and Tenedos took a station to intercept them. It was in this interval that the Chesapeake escaped into the port in the manner related; and on the 1st of May foggy weather, and a sudden favourable shift of wind, enabled the President and Congress to elude the vigilance of the two british frigates and put to sea. ^{The latter escape to sea.}

Captains Broke and Parker very soon discovered the chance they had missed, and sadly disappointed they were. There now remained in Boston only the Constitution and Chesapeake. The first, as has been stated, was undergoing a serious repair; but the Chesapeake had only to get in new main and mizen masts, and would be ready for sea in a week or two. Having obtained a furlough to enjoy his share of prize-money, captain Evans was succeeded in the command of the Chesapeake by captain James Lawrence, the late fortunate, highly applauded, and, we readily admit, truly gallant, commander of the Hornet. ^{Capt. Lawrence appointed to Chesapeake.}

As two frigates were not required to attack one, and as the appearance of such a superiority would naturally prevent the Chesapeake from putting to sea, captain Broke, on the 25th of May, took a supply of water and provisions from the Tenedos, and detached her, with orders to captain Parker not to rejoin him before the 14th of June; by which time, it was hoped, the business would be over. On the 26th the Shannon recaptured the brig Lucy, and on the 29th the brig William, both of Halifax. Aware of the state of incapacity to which some of the british frigates on the station had reduced themselves, by manning and sending in their prizes, captain Broke destroyed all he captured. We believe he had sacrificed not fewer than 25 sail of prizes, to keep the Shannon in a state to meet one or the other of the american frigates. Being resolved to have a meeting with the Chesapeake, nothing but the ^{Capt. Broke detached Tenedos and cruises alone off Boston.}

1813. circumstance of the two recaptures belonging to
 May. Halifax could induce captain Broke to weaken the Shannon's crew by sending them in. The master of the Lucy, assisted by five recaptured seamen belonging to some ship on the station, carried in that vessel; and a midshipman and four of the Shannon's men took charge of the William. On the 29th, in the afternoon, the Shannon boarded the Nova-Scotia privateer brig Sir-John-Sherbrooke, and took from her 22 irish labourers, whom the brig, three days before, along with 30 more, (then volunteers on board herself,) had recaptured in a prize belonging to the american privateer Governor-Plumer; bound, when the latter fell in with her, from Waterford to Burin, Newfoundland.

Guns mounted by the Shannon. Before we proceed further, let us show what guns were mounted by the two frigates, whose mutual animosity was on the eve of being quenched by the capture of one of them. On her main deck, the Shannon was armed the same as every other british frigate of her class, and her established guns on the quarterdeck and forecastle were 16 carronades, 32-pounders, and four long 9-pounders, total 48 guns. But captain Broke had since had mounted a 12-pounder boat-carronade through a port purposely made on the starboard side of the quarterdeck, and a brass long 6-pounder, used generally as an exercise gun, through a similar port on the larboard side; besides which there were two 12-pounder carronades, mounted as standing stern-chasers through the quarterdeck stern-ports. For these last four guns, one 32-pounder carronade would have been more than an equivalent. However, as a 6-pounder counts as well as a 32-pounder, the Shannon certainly mounted 52 carriage-guns. The ship had also, to be in that respect upon a par with the american frigates, one swivel in the fore, and another in the main top.

Guns mounted by Chesapeake. The armament of the Chesapeake, we have already on more than one occasion described: she had at this time, as afterwards found on board of her, 28

long 18-pounders on the main deck, and 20 carronades, 32-pounders, and one long shifting 18-pounder, on the quarterdeck and forecastle, total 49 guns; exclusively of a 12-pounder boat-carronade, belonging to which there was a very simple and well-contrived elevating carriage for firing at the tops, but it is doubtful if the gun was used. Five guns, four 32-pounder carronades and one long 18-pounder, had, it was understood, been landed at Boston. Some have alleged, that this was done by captain Lawrence, that he might not have a numerical superiority over his antagonists of the british 38-gun class: others say, and we incline to be of that opinion, that the reduction was ordered by the american government, to ease the ship, whose hull had already begun to hog, or to arch in the centre.

On the 1st of June, early in the morning, having received no answer to several verbal messages sent in, and being doubtful if any of them had even been delivered, captain Broke addressed to the commanding officer of the Chesapeake a letter of challenge, which, for candour, manly spirit, and gentlemanly style, stands unparalleled. The letter begins: "As the Chesapeake appears now ready for sea, I request you will do me the favour to meet the Shannon with her, ship to ship, to try the fortune of our respective flags." The Shannon's force is thus described: "The Shannon mounts 24 guns upon her broadside, and one light boat-gun, 18-pounders upon her main deck, and 32-pound carronades on her quarterdeck and forecastle, and is manned with a complement of 300 men and boys, (a large proportion of the latter,) besides 30 seamen, boys, and passengers, who were taken out of recaptured vessels lately." After fixing the place of meeting, and providing against all interruption, captain Broke concludes thus: "I entreat you, sir, not to imagine that I am urged by mere personal vanity to the wish of meeting the Chesapeake; or that I depend only upon your personal ambition for your acceding to

1813.
June.

Capt.
Broke
chal-

 soner.

Chesa-
 peake
 sails
 before
 it is de-
 livered.

This letter captain Broke intrusted to a captain
 Slocum, a discharged prisoner, then about to pro-
 ceed, in his own boat, to Marblehead, a port a
 few miles north of Boston. Shortly afterwards
 the Shannon, with colours flying, stood in close
 to Boston lighthouse, and lay to. The Ches-
 apeake was now seen at anchor in President roads,
 with royal yards across and apparently ready for
 sea. The american frigate presently loosed her
 fore topsail, and, shortly afterwards, all her topsails,
 and sheeted them home. The wind, blowing a light
 breeze from west by north, was perfectly fair. At
 about 30 minutes past noon, while the men of the
 Shannon were at dinner, captain Broke went himself
 to the mast-head, and there observed the Chesapeake
 fire a gun, and loose and set topgallantsails.
 The american frigate was soon under way, and
 made more sail as she came down, having in her
 company numerous sailing pleasure-boats, besides
 a large schooner gun-boat, with, we believe, com-
 modores Bainbridge and Hull, and several other
 american naval officers on board. While at the
 Shannon's mast-head, captain Broke saw that captain
 Slocum's boat had not reached the shore in time for
 the delivery of his letter of challenge to the com-
 mander of the Chesapeake. Notwithstanding this,
 there cannot be a doubt, that captain Lawrence had
 obtained the consent of commodore Bainbridge, (whose
 orders from the government at Washington were to

despatch the Chesapeake to sea as soon as she was ready,) to sail and attack the Shannon, in compliance with one or more of the verbal challenges which had been sent in. It was natural for the conqueror of the Peacock to wish for an opportunity to capture or drive away a british ship, that had repeatedly lay to off the port, and, in view of all the citizens, had used every endeavour to provoke the Chesapeake to come out and engage her.

1813.
June.

At 0 55 m. P. M., Cape Ann bearing north-north-east half-east distant 10 or 12 miles, the Shannon filled, and stood out from the land under easy sail. At 1 P. M. the Chesapeake rounded the lighthouse under all sail; and at 3 h. 40 m. P. M. hauled up, and fired a gun, as if in defiance; or, perhaps, to induce the Shannon to stop, and allow the gun-vessel and pleasure-boat spectators an opportunity of witnessing how speedily an american, could "whip" a british frigate. Presently afterwards the Shannon did haul up, and reefed topsails. At 4 P. M. both ships, now about seven miles apart, again bore away; the Shannon with her foresail brailed up, and her main top-sail braced flat and shivering, that the Chesapeake might overtake her. At 4 h. 50 m. the Chesapeake took in her studding-sails, topgallantsails, and royals, and got her royal yards on deck. At 5 h. 10 m. P. M., Boston lighthouse bearing west distant about six leagues, the Shannon again hauled up, with her head to the southward and eastward, and lay to, under topsails, topgallantsails, jib, and spanker.

Chesapeake steers for Shannon; who waits for her.

At 5 h. 25 m. the Chesapeake hauled up her foresail; and, with three ensigns flying, one at the mizen royal-mast-head, one at the peak, and one, the largest of all, in the starboard main rigging, steered straight for the Shannon's starboard quarter. The Chesapeake had also, flying at the fore, a large white flag, inscribed with the words: "SAILORS' RIGHTS AND FREE TRADE;" upon a supposition, perhaps, that this favourite american motto would

Each frigate hoists her colours.

1813. June. paralyse the efforts, or damp the energy, of the Shannon's men. The Shannon had a union jack at the fore, an old rusty blue ensign at the mizen peak, and, rolled up and stopped, ready to be cast loose if either of these should be shot away, one ensign on the main stay and another in the main rigging. Nor, standing much in need of paint, was her outside appearance at all calculated to inspire a belief, of the order and discipline which reigned within.

Chesapeake hauls upon Shannon's starboard quarter. At 5 h. 30 m. P. M., to be under command, and ready to wear if necessary, in the prevailing light breeze, the Shannon filled her main topsail and kept a close luff; but, at the end of a few minutes, having gathered way enough, she again shook the wind out of the sail, and kept it shivering, and also brailed up her driver. Thinking it not unlikely that the Chesapeake would pass under the Shannon's stern, and engage her on the larboard side, captain Broke divided his men, and directed such as could not fire with effect to be prepared to lie down as the enemy's ship passed. But, either overlooking or waving this advantage, captain Lawrence, at 5 h. 40 m., gallantly luffed up, within about 50 yards, upon the Shannon's starboard quarter, and, squaring his main yard, gave three cheers.

Action commences. The Shannon's guns were loaded thus: the aftermost maindeck gun with two round shot and a keg containing 150 musket-balls, the next gun with one round and one double-headed shot, and so alternately along the broadside. The captain of the 14th gun, William Mindham, had been ordered to fire, the moment his gun would bear into the Chesapeake's second maindeck port from forward. At 5 h. 50 m. P. M. the Shannon's aftermost maindeck gun was fired, and the shot was seen to strike close to the port at which it had been aimed.* In a second or so the 13th gun was fired: then the Chesapeake's bow gun went off; and then the remaining guns on the

* See diagram at p. 296.

broadside of each ship as fast as they could be discharged. 1813.

June.

At 5 h. 53 m. p. m., finding that, owing to the quantity of way in the Chesapeake and the calm she had produced in the Shannon's sails, he was ranging too far ahead; and, being desirous to preserve the weathergage in order to have an opportunity of crippling the Shannon by his dismantling shot, captain Lawrence hauled up a little.* At 5 h. 56 m., having had her jib-sheet and fore topsail-tie shot away, and her helm, probably from the death of the men stationed at it, being for the moment unattended to, the Chesapeake came so sharp to the wind as completely to deaden her way; and the ship lay, in consequence, with her stern and quarter exposed to her opponent's broadside. The shot from the Shannon's aftermost guns now took a diagonal direction along the decks of the Chesapeake; beating in her stern-ports, and sweeping the men from their quarters. The shot from the Shannon's foremost guns, at the same time, entering the Chesapeake's ports from the mainmast aft, did considerable execution.† At 5 h. 58 m. an open cask of musket-cartridges, standing upon the Chesapeake's cabin-skylight for the use of the marines, caught fire and blew up, but did no injury whatever. Even the spanker-boom, directly in the way of the explosion, was barely singed.

Chesapeake gets in the wind and is raked by Shannon.

As the Shannon had by this time fallen off a little, and the manœuvres of the Chesapeake indicated an intention to haul away, captain Broke ordered the helm to be put a-lee; but, scarcely had the Shannon luffed up in obedience to her helm, than the Chesapeake was observed to have stern way, and to be paying round off. The Shannon immediately shifted her helm a-starboard, and shivered her mizen topsail, to keep off the wind again, and delay the boarding,

Falls on board of her.

† Ibid. But, in this position, the engraver has not copied the drawing quite so faithfully as he might have done.

1813. probably until her guns had done a little more
June. execution among a crew, supposed to be at least
a fourth superior in number. At that moment, however, the Shannon had her jib-stay shot away; and, her head-sails being becalmed, she went off very slowly. The consequence was, that, at 6 p.m., the Chesapeake fell on board the Shannon, with her quarter pressing upon the latter's side, just before her starboard main-chains. The Chesapeake's fore-sail being at this moment partly loose, owing to the weather clue-garnet having been shot away from the bits, the american frigate forged a little ahead, but was presently stopped, by hooking, with her quarter port, the flook of the Shannon's anchor stowed over the chess-tree.

Capt.
Broke
boards
Chesapeake.

Captain Broke now ran forward; and, observing the Chesapeake's men deserting the quarterdeck guns, he ordered the two ships to be lashed together, the great guns to cease firing, the maindeck boarders to be called, and lieutenant George Thomas L. Watt, the first lieutenant, to bring up the quarterdeck men, who were all boarders. While zealously employed outside the bulwark of the Shannon, making the Chesapeake fast to her, the veteran boatswain, Mr. Stevens, (he had fought in Rodney's action,) had his left arm hacked off with repeated sabre-cuts, and was mortally wounded by musketry. The midshipman commanding on the forecastle, Mr. Samwell, was also mortally wounded. Accompanied by the remaining forecastle party, about 20 in number, captain Broke, at 6 h. 2 m. p. m., stepped from the Shannon's gangway-rail, just abaft the fore rigging, on to the muzzle of the Chesapeake's aftermost carronade, and thence, over the bulwark, upon her quarterdeck. Here not an officer or man was to be seen. Upon the Chesapeake's gangways, about 25 or 30 Americans made a slight resistance. These were quickly driven towards the forecastle; where a few endeavoured to get down the fore hatchway, but, in their eagerness,

prevented each other. Several fled over the bows ; and, while part, as it is believed, plunged into the sea, another part reached the main deck through the bridle-ports. The remainder laid down their arms and submitted. Lieutenant Watt, with several quarterdeck men, and sergeant Richard Molyneux, corporal George Osborne, and the first division of marines ; also lieutenant Charles Leslie Falkiner, third of the Shannon, with a division of the main-deck boarders, quickly followed captain Broke and his small party. Lieutenant Watt, just as he had stepped on the Chesapeake's taffrail, was shot through the foot by a musket-ball fired from the mizen top, and dropped on his knee upon the quarterdeck ; but, quickly rising up, he ordered lieutenant of marines James Johns to point one of the Shannon's 9-pounders at the enemy's top. In the mean time lieutenant Falkiner and the marines, with the second division of which lieutenant John Law had now arrived, rushed forward ; and, while one party kept down the men who were ascending the main hatchway, another party answered a destructive fire still continued from the main and mizen tops. The Chesapeake's main top was presently stormed by midshipman William Smith (now lieutenant e) and his top-men, about five in number ; who either destroyed or drove on deck all the Americans there stationed. This gallant young man had deliberately passed along the Shannon's fore yard, which was braced up, to the Chesapeake's main yard, which was nearly square ; and thence into her top. All further annoyance from the Chesapeake's mizen top had also been put a stop to by another of the Shannon's midshipmen, Mr. Cosnahan, who, from the starboard main yard-arm, had fired at the Americans, as fast as his men in the top could load the muskets and hand them to him.

After the Americans upon the fore-castle had submitted, captain Broke ordered one of his men to stand sentry over them, and then sent most of the

 June. was in the act of giving them orders to answer the
 wound- fire from the Chesapeake's main top, (this was just
 ed by before Mr. Smith's gallant and successful exploit,)
 an when the sentry called lustily out to him. On turning
 Ameri- round, the captain found himself opposed by three
 can whose of the Americans; who, seeing they were superior
 life to the British then near them, had armed themselves
 he had afresh. Captain Broke parried the middle fellow's
 saved. pike, and wounded him in the face; but instantly
 received, from the man on the pikeman's right, a
 blow with the but-end of a musket, which bared his
 scull, and nearly stunned him. Determined to
 finish the british commander, the third man cut him
 down with his broadsword, but, at that very instant,
 was himself cut down by Mindham, the Shannon's
 seaman, already known to us. Captain Broke was
 not the only sufferer upon this occasion: one of
 his men was killed, and two or three were badly
 wounded. Can it be wondered, if all that were
 concerned in this breach of faith fell victims to the
 indignation of the Shannon's men? It was as much
 as captain Broke could do, to save from their fury
 a young midshipman, who, having slid down a rope
 from the Chesapeake's fore top, begged his pro-
 tection. Mr. Smith, who had just at that moment
 descended from the main top, assisted Mindham and
 another of the Shannon's men in helping the captain
 on his legs. While in the act of tying a handker-
 chief round his commander's head, Mindham, point-
 ing aft, called out, "There, sir, there goes up the
 old ensign over the yankee colours." Captain Broke
 saw it hoisting, (with what feelings may well be
 imagined,) and was instantly led to the Chesapeake's
 quarterdeck, where he seated himself upon one of
 the carronade-slides.

Death
 of lieut.
 Watt
 by a
 fire

The act of changing the Chesapeake's colours had
 proved fatal to a gallant british officer, and to four
 or five fine fellows of the Shannon's crew. We left
 lieutenant Watt, just as, having raised himself on

his legs after his wound, he was hailing the Shannon, 1813. to fire at the Chesapeake's mizen top. He then called for an english ensign; and, hauling down the american ensign, bent, owing to the halliards being tangled, the english flag below instead of above it. A few seconds before this, the Chesapeake's quarter gallery had given way, and the two ships were gradually separating. Observing the american stripes going up first, the Shannon's people reopened their fire; and, directing their guns with their accustomed precision at the lower part of the Chesapeake's mizenmast, killed their own first lieutenant (a grape-shot took off the upper part of his head) and four or five of their comrades. Before the flags had got half-way to the mizen peak, they were lowered down and hoisted properly; and the aggrieved and mortified men of the Shannon ceased their fire.

An unexpected fire of musketry, opened by the Americans who had fled to the hold, killed a fine young marine, William Young. On this, lieutenant Falkiner, who was sitting on the booms, very properly directed three or four muskets, that were ready, to be fired down. Captain Broke, from his seat upon the carronade-slide, told lieutenant Falkiner to summon the Americans in the hold to surrender, if they desired quarter. The lieutenant did so. The Americans replied, "We surrender;" and all hostility ceased. The Shannon was now about 100 yards astern of the Chesapeake, or rather upon her larboard quarter. To enable the Shannon to close, captain Broke ordered the Chesapeake's main yard to be braced flat aback, and her foresail to be hauled close up. Almost immediately afterwards captain Broke's senses failed him from loss of blood; and, the Shannon's jollyboat just then arriving with a fresh supply of men, he was conveyed on board his own ship.

Between the discharge of the first gun, and the period of captain Broke's boarding, 11 minutes only elapsed; and, in four minutes more, the Ches-

Da-
mage
to the
Shan-
non.

Now for the damage and loss of men sustained by the respective combatants. Five shot passed through the Shannon; one only below the main deck. Of several round shot that struck her, the greater part lodged in the side, ranged in a line just above the copper. A bar-shot entered a little below the water-mark, leaving a foot or 18 inches of one end sticking out. Until her shot-holes were stopped, the Shannon made a good deal of water upon the larboard tack; but, upon the other, not more than usual. Her fore and main masts were slightly injured by shot; and her bowsprit (previously sprung) and mizenmast were badly wounded. No other spar was damaged. Her shrouds on the starboard side were cut almost to pieces; but, from her perfect state aloft, the Shannon, at a moderate distance, appeared to have suffered very little in the action.

Her
loss of
men.

Out of a crew, including eight recaptured seamen and 22 irish labourers two days only in the ship, of 306 men and 24 boys, the Shannon lost, besides her first lieutenant, her purser, (George Aldham,) captain's clerk, (John Dunn,) 13 seamen, four marines, three supernumeraries, and one boy killed, her captain, (severely,) boatswain, (William Stevens, mortally,) one midshipman, (John Samwell, mortally,) and 56 seamen, marines, and supernumeraries wounded; total, 24 killed and 59 wounded.

Da-
mage
to the
Chesa-
peake.

The Chesapeake was severely battered in her hull, on the larboard quarter particularly. A shot passed

through one of her transoms, equal in stoutness to a 1813. 64-gun ship's; and several shot entered the stern windows. She had two maindeck guns and one carronade entirely disabled. One 32-pounder carronade was also dismounted, and several carriages and slides broken. Her three lower masts, the main and mizen masts especially, were badly wounded. The bowsprit received no injury; nor was a spar of any kind shot away. Her lower rigging and stays were a good deal cut; but neither masts nor rigging were so damaged, that they could not have been repaired, if necessary, without the ship's going into port.

Out of a crew of at least 381 men and five boys or lads, the Chesapeake, as acknowledged by her surviving commanding officer, lost her fourth lieutenant, (Edward I. Ballard,) master, (William A. White,) one lieutenant of marines, (James Broom,) three midshipmen, and 41 petty officers, seamen, and marines killed, her gallant commander and first lieutenant, (both mortally,) her second and third lieutenants, (George Budd and William L. Cox,) acting chaplain, (Samuel Livermore,) five midshipmen, her boatswain, (mortally,) and 95 petty officers, seamen, and marines wounded; total, 47 killed and 99 wounded, 14 of the latter mortally. This is according to the american official account; but, it must be added, that the total that reported themselves, including several slightly wounded, to the Shannon's surgeon, three days after the action, were 115; and the Chesapeake's surgeon wrote from Halifax, that he estimated the whole number of killed and wounded at from 160 to 170.

Of the Chesapeake's guns we have already given a full account: it only remains to point out, that the ship had three spare ports of a side on the forecastle, through which to fight her shifting long 18-pounder and 12-pounder boat-carronade. The former is admitted to have been used in that way; but, as there is some doubt whether the carronade was used, we shall reject it from the broadside force. This

1813.
June.

Her
loss of
men.

Broad-
side
force of
each
ship.

1813. leaves 25 guns, precisely the number mounted by the
 June. Shannon on her broadside. The accuracy of captain
 Broke's statement of his ship's force is, indeed,
 worthy of remark: he even slightly overrated it,
 because he represented all his guns of a side on the
 upper deck, except the boat-gun, as 32-pounder
 carronades, when two of the number were long
 nines.

Ameri-
 can dis-
 man-
 tling
 shot,
 &c.

This will be the proper place to introduce an
 account of some of the extraordinary means of
 attack and defence, to which, in their naval actions
 with the British, the fears of the Americans had com-
 pelled them to resort. Among the Chesapeake's
 "round and grape," (the only admitted cannon-shot
 used on board an american ship,) were found double-
 headed shot in abundance; also bars of wrought iron,
 about a foot long, connected by links and folded
 together by a few rope-yarns, so as, when discharged
 from the gun, to form an extended length of six
 feet. Other bars, of twice the length, and in number
 from three to six, were connected at one end by a
 ring: these, as they flew from the gun, expanded
 in four points. The object of this novel artillery was
 to cut away the shrouds, and facilitate the fall of
 the masts; and the plan was, to commence the action
 with the bar and chain shot, so as to produce, as
 early as possible, that desirable result: after which,
 the american ship could play round her antagonist,
 and cut her to pieces with comparative impunity.

Ame-
 rican
 lan-
 gridge,
 &c.

So much for the matériel of her opponent; nor was
 his personnel forgotten. The canister-shot of the
 Chesapeake, when opened, were found to contain in
 the centre angular and jagged pieces of iron and
 copper, broken bolts, and copper and other nails.
 The musket-cartridges, as we formerly noticed, con-
 tained each three buck-shot loose in the powder;
 and several rifled-barrel pieces were found among
 the small-arms. As british seamen were well known
 to be terrible fellows for getting on board an enemy,
 something was to be done to check them in their

advance. Accordingly, a large cask of unslacked lime ^{1813.} was brought on board the Chesapeake, and placed on the forecastle with the head open, in order that the american crew might scatter the lime by handfuls over the assailants. A bag of the same was placed in the fore top. We do not, however, believe, that captain Lawrence had any hand in this contrivance. One of the Shannon's early shot struck the cask, and scattered the contents, as if in retribution, over the faces and into the eyes of the projectors. We ourselves saw the remains of the lime on and about the Chesapeake's forecastle: we recollect also observing, that the quarterdeck and forecastle barricades of the american frigate were lined with strong netting, to catch the splinters.

Lieutenant Budd, when called upon to certify as to the number of men with which the Chesapeake went into action, swore to 381; but even, admitting his own account of the killed and mortally wounded to be correct, the Chesapeake certainly had five men more. For instance, the prisoners out of the ship, mustered at Halifax, including 91 severely and slightly wounded, and four that were sick, amounted to 325; which number, added to 61, the acknowledged amount of the killed and mortally wounded, makes 386. This was three short of the number, appearing by the Chesapeake's books to have been victualled by her on the morning of the action, and as many as 54 short of the regular complement established upon the ship. Several of the Chesapeake's petty officers, indeed, after their arrival at Melville-island prison, near Halifax, confessed that 30 or 40 hands, principally from the Constitution, came on board; but whose names, in the hurry and confusion, were not entered in the purser's books. In confirmation of several men having joined the ship a very short time before the action, a number of bags and hammocks were found lying in the boats stowed over the booms; and, in direct proof that some of the Constitution's men were on board the Chesapeake's complement of men.

1613. } peake, three or four of the Guerrière's Americans, who, after that ship's capture, had enlisted on board the Constitution, were among the prisoners taken out of the Chesapeake, and were immediately recognised by their former shipmates, now, as stated before, serving on board the Shannon. But, as the american officer swore that the Chesapeake commenced action with only 381 men, we shall give her no more; and, although not above one boy, that would rate as such in a british ship, was to be seen on board the Chesapeake, we shall allow her five.

Model
of re-
cruit-
ing for
the
ame-
rican
ships of
war.

In one of the lockers of the Chesapeake's cabin, was found a letter dated in February, 1811, addressed by Robert Smith, esquire, then secretary at war, to captain Samuel Evans at Boston, directing him to open houses of rendezvous for manning the Chesapeake, and enumerating the different classes, or ratings, at a total of 443. The Chesapeake was manned in April, 1811; and as, in the american naval service, the men enlist for two years and sign articles for that period, the ship would require to be remanned in April, 1813, the very month, as we have seen, in which the Chesapeake returned to Boston. The greater part of the crew then reentered; and, as may be supposed, a very large proportion of those who accepted their discharge were, or rather had been, british men-of-war's men. In order to fill up the deficiency, four houses of rendezvous were opened. The moment a man declared himself a candidate, he received a dollar, and accompanied an officer to the ship. There he was examined as to his knowledge of seamanship, age, muscular strength, &c., by a board of officers, consisting of the master, surgeon, and others: if approved, the man signed the articles and remained where he was; if rejected, he returned to the shore with a dollar in his pocket. So fastidious was the committee of inspection, that frequently, out of five boat-loads of men that would go off to the ship in the course of the day, three would come back, not eligible. The features of the

american war would have borne a very different aspect, could british ships have been manned in a similar way. 1813.

As far as appearance went, the Chesapeake's was a remarkably fine crew; and a clear proof of the stoutness of the men was afforded, when, in the middle of the night after the action, in consequence of a strong manifestation of a desire to retake the ship, the irons, which the Americans had got ready for the wrists of the Shannon's crew, and which, to the number of 360, were stowed in a puncheon, with the head off, standing under the half-deck, came to be put upon the wrists of the Chesapeake's crew. None of the Americans found them too large, and many, when not allowed to choose such as fitted them, complained that the manacles hurt them on account of their tightness. Fine appearance of Chesapeake's men.

Among the 325 prisoners, whose names were set down in the agent's book at Halifax, about 32, including the gunner, were recognised as british seamen. This fellow was an Irishman, and went by the name of Matthew Rogers; by which name, but with, of course, a blank for his birth-place, he stands in the Washington "Register" formerly noticed by us. It is probable that, had the Chesapeake been taken when captain Evans commanded her, five times 32 traitors would have been found on board of her. Nay, the men who, when the first party from the Shannon rushed on board, leaped from the Chesapeake's bows into the water were, it is natural to conjecture, deserters from british ships of war. That they were not all Americans, the following anecdote will prove. One of the Shannon's men, when in the act of cutting down one of the Chesapeake's men, was stopped by the imploring ejaculation, "Would you, Bill?" "What, Jack!" "Ay, Bill, but it won't do; so here goes." Overboard the poor fellow sprang, and was seen no more! This man's name was John Waters, a fine young Bristolian, who had deserted from the Shannon, when at anchor in Halifax harbour, on the British seamen on board Chesapeake.

1813. 3d of the preceding October. We naturally turn to the return of loss at the foot of the american official account; but we search in vain for the name of "John Waters." It is true that he most likely went by another name; but, as it is customary to report men who fall or leap overboard, or who are not actually slain or wounded in the action, under the head of "Missing," and no such head appearing in the american returns, we conclude that all the men of the Chesapeake, whose shame-stricken consciences prompted them to commit self-destruction in the manner of poor Waters, were purposely omitted. We are therefore more than ever convinced, that, when she commenced engaging the Shannon, the Chesapeake had on board upwards of 400 men. But, as we said before, the american sworn amount only shall be introduced into the

Re-
marks
on the
action.

It is clear from this statement, that the "superiority of force," little as it may have been, was on the side of the Chesapeake. That we will not, for a moment, dwell on; nor shall the american star and chain shot, and hogshead of lime, be allowed to disturb the equality and fairness of the action. But captain Broke did something more than capture an american frigate of equal force: he sought and commenced the attack close to an american port filled with armed vessels, and beat his ship in 11, and captured her in 15 minutes; thereby proving, that the bard, who eight months before had sung,

And, as the war they did provoke,
We'll pay them with our cannon;
The first to do it will be BROKE,
In the gallant ship the SHANNON,*

was not a false prophet.

* Naval Chronicle, vol. xxviii. p. 492.

Thus was the spell broken; and we may remark, ^{1813.} that the Chesapeake was not finally subdued by a superiority in that quality which constituted the forte of the Shannon, her gunnery. No, it was by boarding; by captain Broke's quick discernment in catching, and his promptitude and valour in profiting by, the critical moment, when the Chesapeake's men were retreating from their quarters. Gallant, truly gallant, was the behaviour of captain Lawrence. His first lieutenant, Augustus Charles Ludlow, emulated his commander; and both deserved a better crew than the Chesapeake's; a crew that (oh, woful addition!) consisted, within about a twelfth part, of native Americans.

Owing to captain Broke's incapacity from his wound, lieutenant Provo William Parry Wallis, ^{Arrival of the two ships at Halifax.} second of the Shannon, took charge of her, and lieutenant Falkiner, third of the Shannon, remained in charge of the Chesapeake. Having repaired the damage done to their respective rigging, and the Shannon having fished her mizenmast, the two frigates made sail for Halifax; and on the 6th, at 3h. 30m. P.M., the prize, followed by her captor, passed along the wharfs of the town, amidst the cheers of the inhabitants, as well as of the crews of the ships of war that were lying in the harbour. Captain Lawrence had died on board the Chesapeake of his wounds two days before; and captain Broke, in a state of severe suffering from his wounds, was removed from the Shannon to the house of the commissioner, captain the honourable Philip Wodehouse.

Lieutenants Wallis and Falkiner were both deservedly made commanders. Of the acting master, Henry Gladwell Etough, captain Broke in his official letter speaks in high terms; also of lieutenants of marines James Johns and John Law, and midshipmen William Smith, Hugh Cosnahan, John Samwell, Henry Martin Leake, Douglas Clavering, George Raymond, and David Littlejohn; likewise of Mr. Aldham the purser, and Mr. Dunn the clerk, both of whom were killed at the head of the small- ^{Promotion of Shannon's officers.}

1813. arm men. Mr. Etough, and messieurs Smith and Cosnahan, were promoted to lieutenants. For his important achievement, and, in respect to its effect on the public mind, a most important achievement it was, captain Broke was created a baronet: he received, also, the formal thanks of the board of admiralty, and the warm congratulations of every wellwisher to England; and his trophy, the Chesapeake, in a name by which, coupled with that of the Shannon, she will long be remembered both in England and America, was added to the british navy.

Court
of in-
quiry
on ame-
rican
officers
&c.

As a matter of course, a court of inquiry was held, to investigate the circumstances under which the Chesapeake had been captured. Commodore Bainbridge was the president of the court; and the following is the first article of the very "lengthy" report published on the subject: "The court are unanimously of opinion, that the Chesapeake was gallantly carried into action by her late brave commander; and no doubt rests with the court, from comparison of the injury respectively sustained by the frigates, that the fire of the Chesapeake was much superior to that of the Shannon. The Shannon, being much cut in her spars and rigging, and receiving many shot in and below the water line, was reduced almost to a sinking condition, after only a few minutes cannonading from the Chesapeake; whilst the Chesapeake was comparatively uninjured. And the court have no doubt, if the Chesapeake had not accidentally fallen on board the Shannon, and the Shannon's anchor got foul in the after quarter-port of the Chesapeake, the Shannon must have very soon surrendered or sunk." Some very singular admissions of misconduct in the officers and crew follow; and then the report proceeds as follows: "From this view of the engagement and a careful examination of the evidence, the court are unanimously of opinion, that the capture of the late United States' frigate Chesapeake was occasioned by the following causes: the almost unexampled early fall of captain Lawrence, and all the principal officers; the bugleman's desertion of

his quarters, and inability to sound his horn ; for the court are of opinion, if the horn had been sounded when first ordered, the men being then at their quarters, the boarders would have promptly repaired to the spar deck, probably have prevented the enemy from boarding, certainly have repelled them, and might have returned the boarding with success ; and the failure of the boarders on both decks, to rally on the spar deck, after the enemy had boarded, which might have been done successfully, it is believed, from the cautious manner in which the enemy came on board."

It was certainly very "cautious" in captain Broke, to lead 20 men on board an enemy's ship, supposed to be manned with a complement of 400 ; and which, at the very moment, had at least 270 men without a wound about them. The court of inquiry makes, also, a fine story of the firing down the hatchway. Not a word is there of the "magnanimous conquered foe" having fired from below, in the first instance, and killed a british marine. Captain Broke will long have cause to remember the treatment he experienced from this "magnanimous conquered foe." So far, indeed, from the conduct of the British being "a most unwarrantable abuse of power after success," lieutenant Cox of the Chesapeake, in the hearing of several english gentlemen, subsequently admitted, that he owed his life to the forbearance of one of the Shannon's marines. When the american officers arrived on board the Shannon, and some of them were finding out reasons for being "taken so unaccountably," their first lieutenant, Mr. Ludlow, candidly acknowledged, that the Shannon had beaten them heartily and fairly.

Although it would not do for an official document, like that we have just been quoting, to contain an admission, that any portion, any influential portion at least, of the crew of an american ship of war consisted of british seamen, the journalists, pamphleteers,

1813:

Re-
marks
upon it.Ameri-
can ac-
counts.

1813. and historians of the United States did not scruple to attribute to the defection of the latter, the unfortunate issue of the business with the Chesapeake. "There are no better sailors in the world," says an american writer, "than our own; and it seems hard that the war should be carried on for nothing but british sailors' rights, and that those same sailors should desert us in the moment of conflict. Cowardice is a species of treason. If renegado Englishmen are permitted to fight under our flag, it becomes prudent not to mix our own people with them to be destroyed; for, at the critical moment when the boarders were called, the foreigners all ran below, while not a native American shrank from the conflict." A writer in a Boston paper, after he has insisted, that the "native Americans" on board the Chesapeake "fought like heroes," and that the british part of the crew "behaved treacherously," very naturally asks, "Can any of your correspondents inform us, whether any Americans were on board the Shannon?" We may answer, Yes, there were some, (prisoners,) in her hold; although not so many, by several scores, as were in the hold of the Chesapeake, in a very few seconds after the Shannon's boarders sprang upon her quarterdeck.

Reason
that the
ame-
rican
cap-
tains
have a
repug-
nance
to
board-
ing.

But, had the Chesapeake, instead of 32, mustered 100, british men-of-war's men in her crew, we have not a doubt that the same result would have ensued. However expert and courageous these renegades may be when sheltered behind a bulwark, they become paralysed with shame, they sink into the veriest cowards in nature, when opposed face to face to their shipmates of former days, their partners in scenes which they *can* remember with credit. The american commanders have tact enough to see this: hence arises the preference they give to a cannonade engagement; hence the repugnance they invariably show, unless with a twofold superiority, to grapple with their british antagonists.

Previously to our dismissing the action of the Shannon and Chesapeake, we shall confer a service to the profession, by stating as much as we know of the means taken by captain Broke, to endow his men with that proficiency at the guns, the effects of which were so decisive and astonishing. Every day, for about an hour and a half in the forenoon, when not prevented by chase or the state of the weather, the men were exercised at training the guns, and, for the same time in the afternoon, in the use of the broadsword, pike, musket, &c. Twice a week the crew fired at targets, both with great guns and musketry; and captain Broke, as an additional stimulus beyond the emulation excited, gave a pound of tobacco to every man that put a shot through the bull's eye. As the Shannon was always clear for action, and had on deck a sufficient quantity of ammunition for two or three broadsides, it was impossible to take her by surprise; nor could the officers well complain of the want of a few of their cabin conveniences, when the cabin of their chief was so completely stripped of every thing which was not absolutely indispensable, of every thing that could not be removed at a moment's notice.

Capt.
Broke's
method
of ex-
ercising his
men,
&c.

The Chesapeake's late captain was buried at Halifax on the 8th, with military honours such as a post-captain in the british navy of less than three years' standing would be entitled to; and, unlike poor captain Lambert at St.-Salvador,* captain Lawrence was followed to his grave by all the naval captains in port. Lieutenant Ludlow died of his wounds while at Halifax, and was also buried with military honours. On the 10th of August a cartel arrived from Boston, and applied for and carried away the remains of the late captain of the Chesapeake and his first lieutenant, to be deposited, with suitable ceremony, in their own country.

rence.

On the 1st of May, as already stated,† commodore Rodgers, with the President and Congress frigates,

* See p. 198.

† See p. 288.

1813. the latter still commanded by captain Smith, sailed
 May. from President roads, Boston, on his third cruise.

Presi- On the 2d the two american frigates fell in with and
 dent and chased the british 18-gun brig-sloop Curlew, captain
 and Con- Michael Head; but, by knocking away the wedges
 gress sail of her masts and using other means to increase her
 from sailing, the brig effected her escape. On the 8th, in
 Boston: latitude 39° 30' north, longitude 60° west, the Con-
 latter gress, whether by intention or accident is not stated,
 parts parted company.
 com-
 pany.

Presi- The commodore now proceeded alone; pleased,
 dent no doubt, at the prospect thus afforded him, of
 pro- rivalling his brother commodores in the capture,
 ceeds single-handed, of a "large-class" british frigate, and,
 after a like each of them, of being hailed on his return as
 West- one of the first of naval conquerors. The President
 India cruised along the eastern edge of the Grand Bank of
 fleet. Newfoundland, so as to cross the tracks of the West-
 India, Halifax, Quebec, and St.-John's trade. Having
 reached latitude 48° without meeting any thing, the
 commodore stood to the south-east, and cruised off
 the Azores until the 6th of June; when, learning
 from an american merchant vessel, that she had,
 four days previous, passed a homeward-bound West-
 India fleet, the President crowded sail to the north-
 east. Commodore Rodgers, however, was too late;
 and, even had the President got among the merchant
 ships, the admirable sailing of their escort, the Cum-
 berland 74, captain Thomas Baker, might have made
 the commodore regret that he had acted upon the
 information of his countryman.

Steers On the 13th of June, being then in latitude 46°
 for the north, longitude 28° west, the disappointed commo-
 North dore resolved to shape a course towards the North
 Sea. Sea, in the hope of falling in with vessels bound from
 St.-George's Channel to Newfoundland; but, to
 Puts his "astonishment," no prize fell in his way. The
 into his President subsequently made the Shetland islands,
 Bergen and on the 27th of June put into North-Bergen for
 provisions and water. Water was all the commodore

could obtain; and, provided with a supply of that wholesome article, the President quitted North-Bergen on the 2d of July, and stretched over towards the Orkney islands; and thence towards the North-Cape, for the purpose of intercepting a convoy of 25 or 30 sail, which the commodore had understood would leave Archangel about the middle of the month, under the protection of two british brig-sloops.

1813.
July.

Sails
for the
North-
Cape.

On the 19th of July, when off the North-Cape, in company with the privateer-schooner Scourge, of New-York, and in momentary expectation of meeting the Archangel fleet, commodore Rodgers was driven from his station by, in the language of his official letter, "a line-of-battle ship and a frigate," but, in the language of truth, by the british 12-pounder 32-gun frigate Alexandria, captain Robert Cathcart, and 16-gun ship-sloop Spitfire, captain John Ellis. As the commodore is very brief in his account of this meeting, we shall take our narrative from the logs of the two british ships. On the day in question, at 2 h. 30 m. P. M., latitude at noon (the mean of the two ships' reckonings) 71° 52' north, longitude 20° 18' east, the Alexandria and Spitfire, standing south-east by south, with a light wind from the northward, discovered a frigate and a large schooner in the north-north-east. The two british ships immediately hauled up in chase, and at 5 h. 30 m. P. M. tacked to the west-north-west, making the russian as well as english private signals. At 6 h. 15 m. the President and her consort, who had hitherto been standing towards the two british ships, tacked from them to the north-west, under all sail, followed by the Alexandria and Spitfire. At 7 h. 30 m. P. M. the Spitfire was within five miles of the President, who then bore from her north-north-west. In order that there may be no doubt of identity in this case, we subjoin a brief extract or two from the letter of commodore Rodgers. "At the time of meeting with

Alex-
andria
and
Spitfire

1813. the enemy's two ships, the privateer-schooner
 July. Scourge, of New-York, had fallen in company."—
 "I stood towards them until, making out what they
 were, I hauled by the wind upon the opposite tack to
 avoid them."

Scourge parts company and british ships continue in chase of President. The lightness of the night in these latitudes enabling the british frigate and sloop to keep sight of their enemy, no interruption occurred in the chase. On the 20th, at 4 h. 30 m. p. m., finding that the Spitfire, as well as the President, was gaining upon her, the Alexandria cut away her bower-anchor. At 4 h. 40 m. the Scourge parted company from the President, who was now nearly hull-down from the leading british ship. A schooner being unworthy game when a frigate was in sight, the Alexandria and Spitfire continued in pursuit of the President. "Their attention," says the commodore, "was so much engrossed by the President, that they permitted her (the Scourge) to escape, without appearing to take any notice of her."

Spitfire out-sails her consort and gets very near to President. At 6 p. m., when the Alexandria bore from the Spitfire full two miles south-south-east, the President bore north distant only six miles. From this time the american frigate continued gaining upon the Spitfire until 1 h. 10 m. p. m. on the 21st; when, thick weather coming on, the latter lost sight both of her consort and her chase. The discharge of four guns, however, by the Alexandria, enabled the Spitfire to close. The two british ships again making sail, the sloop, at 2 h. 15 m. p. m., again got sight of the President, in the west-south-west, and at 4 p. m. was once more within six miles of her; which, says the commodore, "was quite as near as was desirable." The chase continued, during the remainder of the 21st, to the advantage of the american frigate, until 8 a. m. on the 22d, when the Spitfire, a fourth time, got within six miles of the President; who again, by the most strenuous efforts, began increasing her distance.

At 6 p. m., when nearly hull-down from the little

persevering sloop, and quite out of sight from the Alexandria, the President fired a gun, hoisted an american ensign at her peak and a commodore's broad pendant at her main, and hauled upon a wind to the westward. Captain Ellis continued gallantly to stand on, until, at 6 h. 40 m. P. M., captain Cathcart, who was then eight miles in the east-north-east of his consort, considerably signalled the Spitfire to close. As soon as the latter had done so, sail was again made; and the chase continued throughout that night, and until 10 A. M. on the 23d; when the President had run completely out of sight of both "the line-of-battle ship and the frigate," or, as an american historian says, of the "two line-of-battle ships,"* which had so long been pursuing her.

her
pursu-
ers out
of
sight.

Among the prisoners on board the President at the time of the chase, were the master and mate of the british snow Daphne, of Whitby. According to the journal of these men, published in the newspapers, they, as well as many of the President's officers and men, were convinced that the chasing ships were a small frigate and a sloop of war. They describe, in a ludicrous manner, the preparations on board the President, to resist the attack of this formidable squadron. During each of the three days, a treble allowance of grog was served out to the crew, and an immense quantity of star, chain, and other kinds of dismantling shot got upon deck, in readiness for the action. It appears also that, when the Eliza-Swan whaler hove in sight a few days afterwards, she was supposed to be a large ship of war, and the ceremony with the grog and dismantling shot was repeated. After a very cautious approach on the part of the President, the chase was discovered to be a clump of a merchantman, and made prize of accordingly.

1813. of the other. Will any one pretend, that the flight
 July. of commodore Rodgers was all the effect of delusion?
 of the What! mistake a ship of 422 tons for a "frigate,"
 ameri- and a frigate of 662 tons for a "line-of-battle ship"?
 can Well was it for the commodore that he did not
 and belong to the british navy. Well was it, too, for cap-
 british tains Cathcart and Ellis, that the Alexandria sailed so
 cap- ill; for it was physically impossible that she and the
 tains. Spitfire should have come off victorious. Yet, that
 gallantry, which had urged their captains to the
 pursuit of so formidable a ship, a ship known by her
 ensign and broad pendant to be a similar frigate to
 those that had captured, in succession, the Guerrière,
 Macedonian, and Java, would have impelled them to
 stand by each other, until both ships had either been
 buried in the deep, or become the trophies of the
 american commodore.

Presi- Overjoyed at his escape, commodore Rodgers
 dent sails on determined to quit a region where constant daylight
 her return, afforded an enemy so many advantages over him:
 he therefore crowded sail to the westward. On the
 2d of August, after the President had been four or
 five days in a good position for intercepting the
 trade passing in and out of the Irish Channel, a
 rumour of "superior force in that vicinity," another
 "line-of-battle ship and frigate" probably, rendered
 it expedient for the commodore to shift his cruising
 ground. He then made the circuit of Ireland; and,
 getting into the latitude of Cape Clear, steered
 for the banks of Newfoundland. Here commodore
 Rodgers was near being gratified with the sight of
 a real line-of-battle ship and frigate, the Bellerophon
 74, captain Edward Hawker, bearing the flag of
 vice-admiral sir Richard Goodwin Keats, and the
 Hyperion 36, captain William Pryce Cumby.

Capt- With this intelligence, the President bent her
 tures High- course towards the United States; and on the 23d
 flyer and of September, when a little to the southward of
 arrives at Nantucket, succeeded in decoying and capturing the
 at Rhode- british 5-gun schooner Highflyer, tender to the San-
 island.

Domingo 74, and commanded by her second lieutenant, William Hutchinson. That was not all. ^{1813.}
 Owing to a great deal of cunning on one side, and a tolerable share of imbecility on the other, commodore Rodgers ^{Aug.} obtained the stations of the different british men of war on the american coast; and, taking his measures accordingly, was enabled, on the same day, to enter unobserved the harbour of Newport, Rhode-island.

The Congress frigate continued cruising, without effecting any thing of consequence, until the middle of December; when captain Smith succeeded in reaching, unobserved as it also appears, the harbour of Portsmouth, New-Hampshire. One of her officers, when writing to a friend announcing his return, says: ^{Return of the Congress to Portsmouth N. H. where she is blockaded by the Tenedos.} "The Congress has 410 of her crew on board, all in good health: she lost four men by sickness, and has manned a prize with a few others." The officer's friend carried this letter to a newspaper editor, and he gave it immediate insertion. There cannot therefore be a doubt, that the Congress had quitted port with at least 425 men; and the Congress and Chesapeake were of the same class. Some months after the arrival of the Congress at Portsmouth, the Tenedos cruised off the port; and, during a long blockade, captain Parker used every means in his power to induce the Congress to come out and engage him. But the fate of the Chesapeake had put a stop to the future cruises of the american 18-pounder frigates, and the Congress, after a while, was disarmed and laid up.

On the 5th of August, off the southern coast of the United States, the british schooner Dominica, of 12 carronades, 12-pounders, and two sixes, with, as an extra gun, a 32-pounder carronade upon a traversing carriage, lieutenant George Wilmot Barretté, having under her convoy the king's packet Princess-Charlotte, bound from St.-Thomas's to England, fell in with the french, or rather, the franco-american, privateer-schooner Decatur, of six 12-pounder car- ^{Decatur privateer falls in with Dominica and a king's packet.}

1813. ronades and one long 18-pounder on a traversing
 Aug. carriage, commanded by the celebrated captain
 Dominique Diron.* We have no other details than
 those furnished by the american papers; but we
 suppose that lieutenant Barretté, the moment he dis-
 covered the privateer approaching, hauled off from
 the packet to meet her.

 side.

Commencing the attack from to-windward, at a distance that best suited her long 18-pounder, the Decatur gradually closed with the Dominica, and made an attempt to board, but was repulsed. A second attempt met the same fate; but, after the contest had lasted three quarters of an hour, the Decatur ran her jib-boom through the Dominica's mainsail, when a third attempt, made by the whole of the french crew, succeeded; that is, the privateer's men gained a footing upon the Dominica's deck. Here a sanguinary conflict ensued; in which lieutenant Barretté, although he had been wounded early in the action by two musket-balls in the left arm, fought in the most gallant manner, and, refusing to surrender, was killed. Emulating the example of their youthful commander, (he was not 26,) the remaining officers and men made a noble resistance against double their numbers. Owing to the crowded state of the Dominica's deck from the presence of the boarders, and the valour of the british crew in persisting to struggle with the latter, fire-arms became useless, and cutlasses and cold shot were the chief weapons used. At length, the Dominica's brave crew became diminished to about a dozen effective men and boys; and the Decatur's, then six times more numerous, hauled down the british colours.

Of her 57 men and nine boys, the Dominica had her commander, master, (Isaac Sacker,) purser, (David Brown,) two midshipmen, (William Archer and William Parry,) and 13 seamen and boys killed and mortally wounded, and 47 severely and slightly wounded,

* See vol. iv. p. 388.

including every other officer (her sub-lieutenant was absent) except the surgeon and one midshipman. One of her boys, not 11 years old, was wounded in two places. Poor child! it would have suited thee better to be throwing dumps than "cold shot;" to be gamboling in the nursery, rather than "contending for victory" upon a man of war's deck. Out of a crew of at least 120 men, the Decatur had four killed and 15 wounded.

1813.
Sept.

It appears that captain Diron, by his masterly manœuvres, prevented the Dominica from making any effectual use of her guns, relying for success upon the arm in which he knew he was almost doubly superior. The Dominica was captured by a privateer, certainly, but under circumstances, that reflected an honour rather than a disgrace upon the british character. The following paragraph forms a part of captain Diron's account in the Charleston papers; nor have we been able to discover a contradiction to the serious charge it contains: "During the combat, which lasted an hour, the king's packet Princess-Charlotte remained a silent spectator of the scene; and, as soon as the vessels were disengaged from each other, she tacked and stood to the southward."

Re-
marks
on the
action.

On the 5th of September, at daylight, as the british brig-sloop (late gun-brig) Boxer, of 12 carronades, 18-pounders, and two sixes, captain Samuel Blyth, was lying at anchor near Penguin Point, a few miles to the eastward of Portland in the United States, the american gun-brig Enterprise, of 14 carronades, 18-pounders, and two nines, lieutenant-commandant William Burrows, was seen in the south-south-east. At 7 h. 30 m. P.M., leaving her surgeon, two of her midshipmen, and an army officer, a passenger, on shore at Manhagan, "shooting pigeons," the Boxer got under way; and, at 8 h. 30 m., hoisting three english ensigns, bore up for the Enterprise, then standing on the larboard tack. At 9 A.M.,

1813. the latter tacked and stood to the southward. At
 Sept. 9 h. 30 m., when the two brigs were about four miles apart, it fell calm; and at 11 h. 30 m. a breeze sprang up from the southward, which placed the american brig to-windward. At 2 p. m. the Enterprise made sail on a wind, to try her rate of sailing with the Boxer; and, in half an hour, having clearly ascertained his advantage in this respect, as well as that the Boxer was inferior in size and force, lieutenant Burrows hoisted three american ensigns, and, firing a shot of defiance, bore up to engage.

Action

 ders.

Da-
 mage
 and
 loss on
 each
 side.

At 3 h. 15 m. p. m. the Boxer, being on the starboard tack, fired her starboard broadside, and immediately received the larboard broadside of the Enterprise in return; the two brigs then not more than half pistol-shot apart. In the very first broadside, an 18-pound shot passed through captain Blyth's body, and shattered his left arm. The command of the Boxer then devolved upon her only lieutenant, David McCreery. At about the same time a musket-ball fired from the Boxer mortally wounded captain Burrows. At 3 h. 30 m. p. m. the Enterprise, now commanded by lieutenant Edward R. McCall, ranged ahead, and, rounding to on the starboard tack, raked the Boxer with her starboard guns, and shot away her main topmast and foretopsail yard. The american brig then set her foresail, and, taking a position on the starboard bow of her now wholly unmanageable antagonist, continued pouring in successive raking fires until 3 h. 45 m., when the Boxer surrendered.

The Boxer was much cut up in hull and spars, and, out of her 60 men (12 absent) and six boys, lost, besides her commander, three men killed, and 17 men wounded, four of them mortally. The Enterprise suffered very little injury in her hull and spars; but her rigging and sails were a good deal cut. Out of her 120 men and three boys, the american brig lost one man killed, her commander, one

midshipman, (both mortally,) and 11 men wounded, ^{1813.}
 one of the latter mortally. ^{Sept.}

The established armament of the Boxer was 10 ^{Guns} carronades; and that number, with her two 6-pound- ^{mount-}
 ers, was as many as the brig could mount with effect ^{ed by}
 or carry with ease. But, when the Boxer was refitting ^{Boxer.}
 at Halifax, captain Blyth obtained two additional
 carronades: had he taken on board, instead of them,
 20 additional seamen, the Boxer would have been a
 much more effective vessel. Against the english
 18-pounder carronade, complaints have always been
 made, for its lightness and unsteadiness in action;
 but the american carronade of that caliber is much
 shorter in the breech, and longer in the muzzle:
 therefore it heats more slowly, recoils less, and
 carries farther. The same is the case, indeed, with ^{British}
 all the varieties of the carronade used by the Ameri- ^{and}
 cans; and they, in consequence, derive advantages ^{ame-}
 in the employment of that piece of ordnance, not ^{rican}
 possessed by the English; whose carronades are ^{carron-}
 notoriously the lightest and most inefficient of any in ^{ades.}
 use. If the english carronade, especially of the
 smaller calibers, had displayed its imperfections,
 as these pages have frequently shown that the english
 13-inch mortar was in the habit of doing, by burst-
 ing after an hour or two's firing, the gun must either
 have been improved in form, or thrown out of the
 service. While on the subject of carronades, we
 may remark, that even the few disadvantages in the
 carronade, which the Americans have not been able
 entirely to obviate, they have managed to lessen,
 by using, not only stouter, but double, breechings;
 one of which, in case the ring-bolt should draw,
 is made to pass through the timber-head.

Although it was clearly shown, by the number of ^{No. of}
 prisoners received out of her, that the Boxer com- ^{men on}
 menced the action with only 66 men and boys, ^{board}
 captain Isaac Hull was so officious as to address a ^{of}
 letter to commodore Bainbridge at Boston, purposely ^{Boxer.}
 to express his opinion, that the british brig had

1813. upwards of "100 men on board; for," says captain
 Sept. Hull, "I counted upwards of 90 hammocks." As the
 american public did not know that, in the british
 service, every seaman and marine has two hammocks
 allowed him, this statement from one of their
 favourite naval officers produced the desired effect
 all over the republic, Washington not excepted.

Rela- The Boxer measured 181 tons and a fraction,
 tive size and scant- the Enterprise at least 245 tons; and, while the
 ling of bulwarks of the latter were built of solid oak, those
 the two of the former consisted, with the exception of one
 brigs. plank between each port, of an outer and an inner
 plank, pervious to every grape-shot that was fired. As
 a proof of the difference in the size of the two vessels,
 the mainmast of the Enterprise was 15 inches more
 in circumference than that of the Boxer, and her
 main yard upwards of 10 feet longer.

Re- We will, however, admit that, but for the two-
 marks fold disparity in their crews, these two vessels would
 on the have been a tolerably fair match. It was not in
 action. number of men only, that the disparity existed; an
 acting master's mate, Hugh James, and three seamen,
 as proved at the court-martial assembled to try the
 surviving officers and crew for the loss of the Boxer,
 deserted their quarters in the action. So that, as
 the two midshipmen were absent, lieutenant M'Creery
 was the only officer left after the death of the captain,
 and the latter, it will be recollected, was killed in
 the first broadside; whereas the Enterprise, after
 her gallant commander fell, had still remaining two
 lieutenants, one or two master's mates, and four
 midshipmen. Her crew, also, had evidently been
 well practised at the guns; but the Boxer's men
 appear to have known very little what use to make of
 their guns. The sentence of the court-martial refers
 particularly to this disgraceful circumstance. Upon
 the whole, the action of the Boxer and Enterprise
 was a very creditable affair to the Americans; but,
 excepting the Frolic's action, and that was a case
sui generis, it was the first engagement in which

an american vessel had succeeded against a british vessel nearly equal to her in guns; and, even in this case, the american vessel was doubly superior in crew, better found in every respect, nearly a third larger, and constructed, as we have already stated, of much stouter scantling.

1813.
Aug.

On the 7th of September the gallant commanders of the two brigs were buried at Portland with military and civic honours; and the few surviving officers of the Boxer, to testify their regard for their late commander, caused a tombstone, with a suitable inscription, to be placed over his grave. None of the praises lavished upon the "fine brig of war Boxer" could gain her a place among the national vessels of the United States. She was put up to auction, and sold as a merchant brig; for which service only, and that in peaceable times, she was ever calculated.

Burial
of the
two
com-
mand-
ers.

On the 12th of August, at 6 h. 30 m. A. M., the british 18-gun brig-sloop Pelican, captain John Fordyce Maples, anchored in Cork from a cruise. Before the sails were furled, captain Maples received orders to put to sea again, in quest of an american sloop of war, which had been committing serious depredations in St.-George's Channel, and of which the Pelican herself had gained some information on the preceding day. At 8 A. M., having supplied herself with a few necessary stores, the Pelican got under way, and beat out of the harbour against a very strong breeze and heavy sea; a proof of the earnestness of her officers and crew.

Peli-
can
sails in

1813. in the south-east. This active cruiser was the United States' brig-sloop Argus, captain William Henry Allen, standing close hauled on the starboard tack, with the wind a moderate breeze from the southward. The Pelican was on the weather quarter of the Argus, bearing down under a press of sail to close her; nor did the latter make any attempt to escape, her commander, who had been first lieutenant of the United-States in her action with the Macedonian, being confident, as it afterwards appeared, that he could "whip any english 22-gun" (as all the british 18-gun brigs were called in America) sloop of war in 10 minutes. Let us now show the force of each of these anxious candidates for the laurel crown.

Guns,
&c.
mount-
ed by
each
brig.

The Pelican mounted the usual establishment of her class, 16 carronades, 32-pounders, and two long sixes, with a 12-pounder boat-carronade. But, unfortunately, captain Maples, when recently at Jamaica, had taken on board two brass 6-pounders. As there were no broadside ports for them, these surplusage guns were not thrown into the hold along with the ballast, but were mounted through the stern-ports, to the perpetual annoyance of the man at the helm, without a redeeming benefit in contributing, in the slightest degree, to the brig's actual force. Of her established complement of 120 men and boys, the Pelican had on board 101 men and 12 boys; and, among her absentees, was her second lieutenant. The Argus mounted 18 carronades, 24-pounders, and two long english 12-pounders, the same, we believe, that had belonged to the Macedonian. On quitting the United States upon this cruise, the Argus mustered 157 men and boys; but she had since manned so many prizes as to reduce her crew to 127, or, as acknowledged by her officers, 125, a number that included about three lads or boys.

Argus
short-
ens
sail and
action
com-
mences

At 4 h. 30 m. A. M., being unable to get the weather-gage, the Argus shortened sail, to give the Pelican the opportunity of closing. At 5 h. 55 m. A. M., St. David's Head bearing east distant about five leagues,

the Pelican hoisted her colours. The Argus immediately did the same, and at 6 A. M., having wore round, opened her larboard guns within grape-distance; receiving in return the starboard broadside of the Pelican. In about four minutes captain Allen was severely wounded, and the main braces, main springstay, gaff, and trysail-mast of the Argus were shot away. At 6 h. 14 m. the Pelican bore up, to pass astern of the Argus; but the latter, now commanded by lieutenant William Henry Watson, adroitly threw all aback, and frustrated the attempt, bestowing at the same time a well intended, but ineffective raking fire. At 6 h. 18 m., having shot away her opponent's preventer-brace and main top-sail-tie, and thus deprived her of the use of her after-sails, the Pelican passed astern of and raked the Argus, and then ranged up on her starboard quarter, pouring in her fire with destructive effect. In a short time, having by this vigorous attack had her wheel-ropes and running rigging of every description shot away, the Argus became entirely unmanageable, and again exposed her stern to the broadside of the Pelican; who, shortly afterwards, passing the broadside of the Argus, placed herself on the latter's starboard bow. In this position the british brig, at 6 h. 45 m. A. M., boarded the american brig, and instantly carried her, although the master's mate of the Pelican, Mr. William Young, who led the party, received his death-wound from the fore top of the Argus, just as he had stepped upon her gunwale. Even this did not encourage the american crew to rally; and two or three, among those who had not run below, hauled down the colours.

On board the Pelican, one shot had passed through the boatswain's and another through the carpenter's cabin. Her sides were filled with grape-shot, and her rigging and sails much injured: her foremast and main topmast were slightly wounded, and so were her royal-masts; but no spar was seriously hurt. Two of her carronades were dismounted. Out of

Pelican

1813. her 101 men and 12 boys, the Pelican lost, besides
 Aug. the master's mate, Mr. Young, slain in the moment
 of victory, one seaman killed, and five slightly
 wounded, chiefly by the american musketry and
 langridge; the latter to the torture of the wounded.
 Captain Maples had a narrow escape: a spent
 canister-shot struck, with some degree of force, one
 of his waistcoat buttons, and then fell on the deck.

Same The Argus was tolerably cut up in her hull.
 on Both her lower masts were wounded, although not
 board badly, and her fore shrouds on one side were nearly
 Argus. all destroyed; but, like the Chesapeake, the Argus
 had no spar shot away. Several of her carronades
 were disabled. Out of her 122 men and three boys,
 to appearance a remarkably fine ship's company, the
 Argus had six seamen killed, her commander, two
 midshipmen, the carpenter, and three seamen mort-
 tally, her first lieutenant and five seamen severely,
 and eight others slightly, wounded; total, six killed
 and 18 wounded.

Broad- We shall not, of course, reckon as a part of the
 side Pelican's broadside force the two 6-pounders in
 guns of her stern-ports, nor, for the reason formerly stated,
 each the 12-pounder boat-carronade. Although a trifle
 brig. shorter on deck than the Pelican, the Argus carried
 her 10 guns of a side with ease; first, because, being
 of a smaller caliber, they took up rather less room,
 and next, because her tiller worked on the 'tween
 decks, and admitted her aftermost port to be carried
 nearer to her stern by several feet. The american
 writers dwelt upon the number of prizes which the
 Argus had previously made, partly with the view of
 raising an inference, that she had reduced her ammu-
 nition to an inadequate amount. The fact is that,
 after her action with the Pelican, the Argus had
 more powder left than was supplied to the Pelican at
 her first outfit; and the american brig's round,
 grape, and canister shot, exclusive of bars of iron,
 old iron, rusty nails, bayonets lashed together with
 rope-yarn, and other species of american langridge,

weighed 22 cwt. With respect, also, to muskets, 1813. pistols, swords, and pikes, nearly twice as many ^{Aug.} were found on board the Argus, as were allowed to a british brig-sloop of the Pelican's class.

The Argus was built at Boston in the year 1799 ^{Size, &c. of the Argus.} or 1800: she measured 298 tons american, or 316 english; and her qualifications as a cruiser called forth the following encomium from the editor of the National Intelligencer: "She is admitted to be one of the finest vessels in the service of her class, and the model of such a vessel is certainly inestimable." But the Argus at that time had not been captured by the British. In point of length, the two brigs were the same, within about four feet in favour of the Pelican; who had also three feet more beam, and consequently was of greater measurement by nearly 70 tons. But, while the main yard of the Pelican was 54 feet 7 inches in length, that of the Argus was 55 feet 2 inches. In point of scantling, the Argus had also the advantage in a slight degree:

COMPARATIVE FORCE OF THE COMBATANTS.

		PELICAN.	ARGUS.
Broadside-guns.....	{ No.	9	10
	{ lbs.	262	228
Crew (men only).....	No.	101	122
Size	tons	385	316

We will set the Americans a good example by freely admitting, that there was here a superiority against them; but then, even after she had captured the Argus, the Pelican was in a condition to engage and make prize of another american brig just like her. The slight loss incurred on one side in this action is worth attending to, not only by the boasters in the United States, but by the croakers in Great Britain. ^{Remarks on the action.}

Despatching his prize, with half her crew, including the wounded, and a full third of his own, in charge of the Pelican's first and only lieutenant, Thomas Welsh, to Plymouth, captain Maples himself,

1813. with the remaining half of the prisoners, proceeded to
 Aug. Cork, to report his proceedings to admiral Thorn-
 Prom- borough. On the 16th the Argus arrived at Ply-
 tion of mouth; and soon afterwards, for the promptitude,
 captain skill, and gallantry which he had displayed captain
 Maples Maples was most deservedly posted. Captain
 Death Allen had his left thigh amputated by his own
 of capt. surgeon; and, notwithstanding every attention,
 Allen. died on the 18th of August, at Mill-Prison hospital.
 On the 21st he was buried with high military
 honours, and attended to his grave by all the navy,
 marine, and army officers in the port.

Court of in- A court of inquiry was of course held on the sur-
 quiry viving officers and crew of the Argus, for the loss of
 on their vessel. The court declared, "it was proved
 officers that, in the number of her crew, and in the number
 and and caliber of her guns, the Pelican was decidedly
 crew of superior to the Argus." How it was "proved" that
 Argus. the Pelican had more men than the Argus, or what
 was the number that either vessel carried, the
 court did not deem it worth while to state. Nor
 does lieutenant Watson, in his official letter, and
 which doubtless was before the court, make the
 slightest allusion to any superiority on the part of
 the Pelican in number of men. But the court was
 not aware, perhaps, that lieutenant Watson, and the
 two officers next in rank to him, had solemnly sworn,
 in a british prize-court, that the Argus went into
 action with 125 men. Lieutenant Watson officially
 enumerates the Pelican's guns, boat-carronade and
 all, at 21; and, many months before the sitting of
 the court, that officer, lieutenant William Henry
 Allen the younger, and the brig's master, had sworn
 that the Argus mounted 20 guns; a very "decided"
 superiority certainly. Upon the whole, we must
 conclude, that these american courts of inquiry are
 less scrupulous about the truth, than the expediency,
 of the decisions they pronounce; and yet some
 persons may consider it not very wise in the
 Americans, looking back on their previous boastings,

to make the "caliber of guns" a subject of investigation. 1813.
Feb.

Unfortunately, the capture of frigate after frigate by the Americans could not persuade the british government, that the United States were in earnest about going to war. Hence, instead of one of the 10 or 12 dashing flag-officers, whose names have recently figured in these pages, being sent out to fight the Americans into compliance, a superannuated admiral, whose services, such as they were, bore a very old date, arrived, early in March, 1813, in Chesapeake bay, to try the effect of diplomacy and procrastination. Had not sir John Warren's second in command, rear-admiral Cockburn, been of a more active turn, the inhabitants of that very exposed part of the american sea-frontier, the coast around the bay in which the two admirals had cast anchor, would scarcely have known, except by hearsay, that war existed. But, before we proceed to give an account of the proceedings of rear-admiral Cockburn in the rivers at the head of the Chesapeake, we have to relate a boat-attack that took place a few weeks previous to his arrival on the american coast.

On the 8th of February, at 9 A. M., while a british British
boats
chase
Lottery
schoo-
ner. squadron, consisting of the 18-pounder 36-gun frigates Maidstone and Belvidera, captains George Burdett and Richard Byron, and 38-gun frigates Junon and Statira, captains James Sanders and Hassard Stackpoole, was at anchor in Lynhaven bay, a schooner was observed in the north-west, standing down Chesapeake bay. Immediately the boats of the Belvidera and Statira were detached in chase. Shortly afterwards, on captain Byron's making the signal, that the chase was superior to the boats, a fresh force of boats was sent, making nine in all, under the command of lieutenant Kelly Nazer.

On seeing the boats approaching her, the schooner, which was the Lottery, of six 12-pounder carronades and 28 men, captain John Southcomb, from Baltimore bound to Bordeaux, made all sail to escape ;

1813. but soon found herself becalmed. At 1 P. M. she
 Feb. opened from her stern-chasers a well-directed fire
 upon the headmost boats, or those first detached.
 These rested on their oars until their comrades
 came up; when the whole rushed forward, and,
 through a very animated fire of round and grape,
 boarded the schooner, but did not carry her until
 after a most obstinate resistance, in which captain
 Southcomb was mortally wounded, and 18 of his
 men also wounded, many of them dangerously.
 The British sustained a loss comparatively slight,
 having had only one man killed and five wounded.

Capt-
 ture
 her
 after a
 brave
 resist-
 ance.

Gallant
 beha-
 viour
 and
 death
 of capt.
 South-
 comb.
 This was a very gallant resistance on the part of
 the Lottery; and captain Southcomb, until he
 died, was treated with the greatest attention by
 captain Byron, on board of whose frigate he had
 been brought. Captain Byron then sent the body of
 the Lottery's late commander on shore, with every
 mark of respect due to the memory of a brave officer;
 and he afterwards received a letter of thanks from
 captain Charles Stewart of the american 18-pounder
 36-gun frigate Constellation, at an anchor in
 St.-James river leading to Norfolk, watching an
 opportunity to put to sea. The Lottery was a fine
 schooner of 225 tons, pierced for 16 guns, and after-
 wards became the Canso in the british service.

Boats

 detach-
 ed up
 Rappa-
 han-
 nock.
 Just as sir John Warren, with the 74-gun ships San-
 Domingo, bearing his flag, captain Charles Gill, and
 Marlborough, bearing rear-admiral Cockburn's flag,
 captain Charles Bayne Hodgson Ross, accompanied
 by the Maidstone and Statira frigates and Fantome
 and Mohawk brig-sloops, had arrived abreast of the
 river Rappahannock, in their way up the Ches-
 apeake, five large armed schooners were discovered,
 and were immediately chased into the river by the
 frigates and smaller vessels. It now falling calm,
 the boats of the two line-of-battle ships and frigates,
 consisting of the San-Domingo's pinnace, with 23
 officers and men and a 12-pounder carronade, under
 lieutenant James Polkinghorne, Maidstone's launch,

with 21 officers and men and a 12-pounder carronade, under lieutenant Matthew Liddon, Marlborough's barge and cutter, with 40 officers and men, under lieutenants George Constantine Urmston and James Scott, and Statira's cutter with 21 officers and men, under lieutenant George Bishop, total 105 officers and men, were immediately detached in pursuit.

1818.
Feb.

After rowing 15 miles, lieutenant Polkinghorne found the four schooners, which were the Arab, of seven guns and 45 men, Lynx, of six guns and 40 men, Racer, of six guns and 36 men, and Dolphin, of 12 guns and 98 men, drawn up in line ahead, and fully prepared to give him a warm reception. He, notwithstanding, dashed at them. The Arab was boarded and carried by the Marlborough's two boats; the Lynx hauled down her colours just as the San-Domingo's pinnace arrived alongside; and the Racer was carried by lieutenant Polkinghorne, after a sharp resistance. The guns of the Racer were then turned upon the Dolphin; and the latter was gallantly boarded and carried by the Statira's cutter and Maidstone's launch.

Capture
of four
armed
schooners.

The loss sustained by the British in this very gallant boat-attack amounted to one seaman and one marine killed, lieutenant Polkinghorne, another lieutenant, (William Alexander Brand,) one lieutenant of marines, (William Richard Flint,) one midshipman, (John Sleigh,) and seven seamen and marines wounded. The loss sustained by the Americans was six men killed and 10 wounded. The captured schooners were very fine vessels and of large dimensions for schooners, each measuring from 200 to 225 tons. The Racer and Lynx, under the names of Shelburne and Musquedobit, were afterwards 14-gun schooners in the British service. Because, probably, these four formidable schooners were only privateers, the gallantry of lieutenant Polkinghorne in capturing them, with a force so decidedly inferior, did not obtain him a commander's rank until upwards of 14 months afterwards.

Rear-
adm.
Cock-
burn
pro-
ceeds
on his
expedi-
tion
up the
rivers
of the
Chesa-
peake.

Rear-admiral Cockburn was now directed, with a squadron of small vessels, to penetrate the rivers at the head of the bay, and endeavour to cut off the enemy's supplies, as well as to destroy his foundries, stores, and public works; particularly a dépôt of flour, military and other stores, ascertained, by the information of some Americans, to be at a place called French-town, situated a considerable distance up the river Elk. Accordingly, on the evening of the 28th of April, taking with him the brigs Fantome and Mohawk, and the Dolphin, Racer, and Highflyer tenders, the rear-admiral moved towards the river. Having anchored the brigs and schooners as far within the entrance as could be effected after dark, the rear-admiral took with him, in the boats of his little squadron, commanded by lieutenant George Augustus Westphal, first of the Marlborough, 150 marines, under captains Marmaduke Wybourn and Thomas Carter, and five artillerymen, under lieutenant Robertson, of that corps, and proceeded to execute his orders.

At-
tacks
French
town,
de-
stroys
batter-
ry, ves-
sels,
&c.

Having, owing to ignorance of the way, entered the Bohemia, instead of keeping in the Elk river, the boats did not reach the destined place till late on the following morning. This delay enabled the inhabitants of French-town, to make arrangements for the defence of the stores and town; for the security of which a six-gun battery had lately been erected. As soon as the boats approached within gun-shot of it, a heavy fire was opened upon them. Disregarding this, however, the marines quickly landed; and the american militia fled from the battery to the adjoining woods. The inhabitants of the town, which was situated at about a mile distant, having, as far as could be ascertained, taken no part in the contest, were not in the slightest degree molested; but a considerable quantity of flour, of army-clothing, saddles, bridles, and other equipments for cavalry; also various articles of merchandise, and the two stores in which they had been

contained, together with five vessels lying near the place, were entirely consumed. The guns of the battery, being too heavy to be carried away, were disabled; and the boats departed, with no other loss than one seaman wounded in the arm by a grape-shot. The Americans lost one man killed by a rocket, but none wounded.

The rear-admiral's system, and which he had taken care to impart to all the Americans captured by, or voluntarily coming on board, the squadron, was, to land without offering molestation to the unopposing inhabitants, either in their persons or properties; to capture or destroy all articles of merchandise and munitions of war; to be allowed to take off, upon paying the full market price, all such cattle and supplies as the british squadron might require; but, should resistance be offered, or menaces held out, to consider the town as a fortified post, and the male inhabitants as soldiers; the one to be destroyed, the other, with their cattle and stock, to be captured.

As the boats, in their way down the Elk, were rounding Turkey point, they came in sight of a large estate, surrounded by cattle. The rear-admiral landed; and, directing the bailiff, or overseer, to pick out as many oxen, sheep, and other stock, as were deemed sufficient for the present use of the squadron, paid for them to the full amount of what the bailiff alleged was the market price. Not the slightest injury was done; or, doubtless, one of the industrious american historians would have recorded the fact. Having learnt that cattle and provisions, in considerable quantity, were at Specucie Island, the rear-admiral, with the brigs and tenders, proceeded to that place. In his way thither, it became necessary to pass in sight of Havre de Grace, a village of about 60 houses, situated on the west side of the Susquehanna, a short distance above the confluence of that river with the Chesapeake. Although the British were a long way out of gun-

April.

The rear-admiral's system of treating the Americans explained

Boats landed at Turkey point.

1813. shot, the Americans at Havre de Grace, as if inspired by the heroism of their townsman, commodore May. Rodgers, fired at them from a six-gun battery, and Are fired at from Havre de Grace. displayed to their view, as a further mark of defiance, a large american ensign. This determined the rear-admiral to make that battery and town the next object of attack. In the mean while, he anchored off Specucie Island. Here a part of the boats landed, and obtained cattle upon the same terms as before. Anchor off Specucie island. A complaint having been made, that some of the subordinate officers had destroyed a number of turkies, the rear-admiral paid the value of them out of his own pocket. The Americans as they were driving the cattle to the boats, jeered the men, saying, "Why do you come here? Why don't you go to Havre de Grace? There you'll have something to do." About this time a deserter gave the people at Havre de Grace, who had already been preparing, notice of the intended attack.

Attack Havre de Grace and carry battery. After quitting Specucie Island, the rear-admiral bent his course towards Havre de Grace; but the shallowness of the water admitting the passage of boats only, the 150 marines and the five artillery-men embarked at midnight on the 2d of May, and proceeded up the river. The Dolphin and Highflyer tenders attempted to follow in support of the boats, but shoal water compelled them to anchor at the distance of six miles from the point of attack. By daylight, the boats succeeded in getting opposite to the battery; which mounted six guns, 12 and 6 pounders, and opened a smart fire upon the British. The marines instantly landed to the left; which was a signal to the Americans to withdraw from their battery. Lieutenant Westphal, having in the mean time stationed his rocket-boat close to the battery, now landed with his boat's crew, turned the guns upon the american militia, and drove them to the extremity of the town. The inhabitants still keeping up a fire from behind the houses, walls, and trees, lieutenant Westphal, by the admiral's orders, held

out a flag of truce, and called upon them to desist. 1813.
 Instead of so doing, these "unoffending citizens" ^{May.}
 fired at the british lieutenant, and actually shot him ^{Lieut.}
 through the very hand that was bearing the flag of ^{West-}
 truce. After this, who could wonder if the british ^{phal}
 seamen and marines turned to the right and to the ^{wound-}
 left, and demolished every thing in their way? The ^{ed}
 towns-people themselves had constructed the battery; ^{while}
 and yet not a house in which an inhabitant remained ^{carry-}
 was injured. Several of the inhabitants, principally ^{ing a}
 women, who had fled at first, came again into the ^{flag of}
 town, and got back such articles as had been taken. ^{truce.}
 Some of the women actually proceeded to the boats;
 and, upon identifying their property, obtained its
 restoration.

Many of the inhabitants who had remained peace- ^{Good}
 ably in their houses, as a proof that they were well ^{behaviour}
 informed of the principle upon which sir George ^{of some}
 Cockburn acted, frequently exclaimed to him: "Ah, ^{of the}
 sir, I told them what would be the consequence of ^{inhab-}
 their conduct. It is a great pity so many should ^{itants.}
 suffer for a headstrong few. Those who were the
 most determined to fire upon you the other day,
 saying it was impossible you could take the place,
 were now the first to run away." Several of the
 houses that were not burnt did, in truth, belong to
 the chief agents in those violent measures which had
 caused such severity on the part of the British; and
 the very towns-people themselves pointed out the
 houses. Lieutenant Westphal, with his remaining
 hand, pursued and took prisoner an american captain
 of militia; and others of the party brought in an
 ensign and several privates, including an old Irish-
 man, named O'Neill. After embarking the six guns
 from the battery, and taking or destroying about
 130 stands of small-arms, the British departed from
 Havre de Grace.

One division of boats, headed by the rear-admiral, ^{British}
 then proceeded to the northward, in search of a ^{destroy}
 cannon-foundry, of which some of the inhabitants of ^{a can-}
 non

1813. Havre de Grace had given information. This was
 May. found, and quickly destroyed; together with five
 found- long 24-pounders, stationed in a battery for its pro-
 ry near tection; 28 long 32-pounders, ready for sending
 Havre away; and eight long guns, and four carronades, in
 de the boring-house and foundry. Another division of
 Grace. boats was sent up the Susquehanna; and returned,
 after destroying five vessels and a large store of flour.

Boats ascend river Sassafras.
 On the night of the 5th of May, the same party of
 british marines and artillerymen again embarked in
 the boats, and proceeded up the river Sassafras,
 separating the counties of Kent and Cecil, towards
 the villages of George-town and Frederick-town,
 situated on opposite sides of the river, nearly facing
 each other. Having intercepted a small boat with
 two of the inhabitants, rear-admiral Cockburn halted
 the detachment, about two miles from the town; and
 then sent forward the two Americans in their boat,
 to warn their countrymen against acting in the same
 rash manner as the people of Havre de Grace had
 done; assuring them that, if they did, their towns
 would inevitably experience a similar fate; but that,
 on the contrary, if they did not attempt resistance,
 no injury should be done to them or their towns; that
 vessels and public property only would be seized;
 that the strictest discipline would be maintained;
 and that whatever provision, or other property of
 individuals, the rear-admiral might require for the
 use of the squadron, would be instantly paid for in
 its fullest value. The two Americans agreed in the
 propriety of this; said there was no battery at either
 of the towns; that they would willingly deliver the
 message, and had no doubt the inhabitants would
 be peaceably disposed.

Are fired at from George town.
 After waiting a considerable time, the rear-admiral
 advanced higher up; and, when within about a mile
 from the towns, and between two projecting points
 of land which compelled the boats to proceed in close
 order, a heavy fire was opened upon them from one
 field-piece, and, as conjectured, 300 or 400 militia,

divided and intrenched on the opposite sides of the river. The fire was promptly returned, and the rear-admiral pushed on shore with the marines; but, the instant the american militia observed them fix their bayonets, they fled to the woods, and were neither seen nor heard of afterwards. All the houses, excepting those whose owners had continued peaceably in them and taken no part in the attack, were forthwith destroyed; as were four vessels lying in the river, together with some stores of sugar, of lumber, of leather, and other merchandise. On this occasion, five of the British were wounded. One of the Americans, who entreated to have his property saved, wore military gaiters; and had, no doubt, assisted at the firing upon the British. Agreeably to his request, however, his property was left untouched.

1813.
May.

British
land
and
destroy
houses,
&c.

On his way down the river, the rear-admiral visited a town situated on a branch of it. Here a part of the inhabitants actually pulled off to him; and, requesting to shake hands, declared he should experience no opposition whatever. The rear-admiral accordingly landed, with the officers, and, chiefly out of respect to his rank, a small personal guard. Among those that came to greet him on his landing, were observed two inhabitants of George-town. These men, as well as an inhabitant of the place who had been to George-town to see what was going on, had succeeded in persuading the people to adopt, as their best security, a peaceable demeanour. Having ascertained that there were no warlike stores nor public property, and obtained, upon payment of the full value, such articles as were wanted, the rear-admiral and his party reembarked. Soon afterwards a deputation was sent from Charles-town, on the north-east river, to assure the rear-admiral, that the place was considered as at his mercy; and, similar assurances coming from other places in the upper part of the Chesapeake, the rear-

militia.

Persons in England may find it difficult to consider, as soldiers, men neither embodied nor dressed in regimentals. That circumstance has not escaped the keen discernment of the american government. Hence the British are so often charged, in proclamations and other state-papers, with attacking the "inoffensive citizens of the republic." The fact is, every man in the United States, under 45 years of age, is a militiaman; and, during the war, attended in his turn, to be drilled or trained. He had always in his possession either a musket or a rifled-barrel piece; knew its use from his infancy; and with it, therefore, could do as much execution in a smock frock or plain coat, as if he wore the most splendid uniform. These soldiers in citizens' dresses were the men whom rear-admiral Cockburn so frequently attacked and routed; and who, when they had really acted up to the character of non-combatants, were invariably spared, both in their persons and properties. The rear-admiral wished them, for their own sakes only, to remain neutral; but general Hull, in his famous proclamation, prepared with so much care at Washington, invited the canadian people to become open traitors to their country; and visited, upon the heads of those that refused, all "the horrors and calamities of war."

Boats
of Nar-
cissus
capture
Sur-
veyor.

On the 12th of June the boats of the 18-pounder 32-gun frigate Narcissus, captain John Richard Lumley, containing about 40 men, under the command of lieutenant John Cririe, first of that ship, and of lieutenant of marines Patrick Savage, were despatched up York river, in the Chesapeake, to cut out the United States' schooner Surveyor, mounting six 12-pounder carronades. Captain Samuel Travis, the american commander, had furnished each of his men with two muskets; and they held their fire until the British were within pistol-shot. The Americans

then opened; but the boats pushed on, and finally carried the vessel by boarding, with the loss of three men killed, and six wounded. Captain Travis had five men wounded. His crew amounted to only 16; and so gallant was their conduct, as well as that of their commander, in the opinion of lieutenant Critie, that that officer returned captain Travis his sword, accompanied by a letter, not less complimentary to him, than creditable to the writer.

Admiral Warren, who had quitted the Chesapeake for Bermuda, returned to his command early in June, bringing with him, according to newspaper-account, a detachment of battalion-marines, 1800 strong, 300 of the 102d regiment, 250 of the Independent Foreigners, or canadian chasseurs, and 300 of the royal marine-artillery; total 2650 men. On the 18th of June the Junon frigate anchored in Hampton roads, and captain Sanders despatched his boats to capture or destroy any vessels that might be found at the entrance of James river. Commodore John Cassin, the naval commanding officer at Norfolk, observing this, directed the 15 gun-boats at that station to be manned with an additional number of seamen and marines from the Constellation frigate, then moored at the navy-yard, also with 50 infantry from Craney island, and despatched them under the command of captain Tarbell, to attempt the capture or destruction of the Junon.

It was not till about 4 P. M. on the 20th, that this formidable flotilla, armed with upwards of 30 guns, half of which were long 32 and 24 pounders, and manned with, at least, 500 men, commenced its attack upon the Junon, then lying becalmed. Captain Sanders warmly returned their fire with his long 18-pounders, hoping that they would soon venture to approach within reach of his carronades. This the gun-boats carefully avoided; and, between them and the frigate, a distant cannonade, very slightly injurious to either party, was maintained for about three quarters of an hour. A breeze now

 June. frigate, Barrosa, captain William Henry Shirreff,
 and the 24-gun ship Laurestinus, captain Thomas
 Graham, lying about five miles off, to get under way,
 in the hope to have a share in the amusement. The
 Junon, also, was at this time under sail, using her
 best efforts to give a more serious complexion to the
 contest; but commodore Cassin, who, as he assures
 us, was in his boat during the whole of the action,
 considering that the flotilla had done enough to
 entitle him to display both his fighting, and his epis-
 tolarly, qualifications, very prudently ordered the
 15 gun-boats to make the best of their way back to
 Norfolk.

Nor-
 folk
 and
 Hamp-
 ton re-
 inforc-
 ed.

The appearance of the two frigates and sloop in
 Hampton roads soon brought to Norfolk and its
 vicinity as many as 10000 militia; and the works,
 recently constructed there, were all manned, ready
 for defending that important post. At Hampton,
 also, a militia force had assembled; and batteries
 were erecting, in case that town should prove the
 object of attack. On the 20th of June 13 sail of
 british ships, consisting of three 74s, a 64 armée en
 flute, four frigates, and five sloops, transports, and
 tenders, lay at anchor, the nearest within seven, the
 furthest off within 13, miles of Craney island. An
 assemblage of boats at the sterns of several of the
 ships, on the afternoon of that day, gave no very
 unequivocal notice to the people on shore, that
 some expedition was on foot. Accordingly, Craney
 island being rather weakly manned, the commanding
 officer at Norfolk sent 150 of the Constellation's
 seamen and marines to a battery of 18-pounders on
 the north-west, and about 480 Virginia militia to
 reinforce a detachment of artillery stationed with
 two 24 and four 6 pounders on the west, side of the
 island. Captain Tarbell's 15 gun-boats were also
 moored in the best position for contributing to the
 defence of the post.

Also
 Craney
 island.

After two days' parade of boats and bustle among

the british ships, a division of 17 or 18 boats, at day-
light on the morning of the 22d, departed with about
800 men, under major-general Beckwith, round the
point of Nansemond river, and landed them at a
place called Pig's point, near to the narrow inlet
separating the main from Craney island. Owing to
some error in the arrangements, unexpected obsta-
cles presented themselves. An attack from that
quarter being therefore considered hopeless, and the
position itself not tenable, the troops, in the course
of the day, reembarked and returned to the
squadron.

1813.
June.
Unsuc-
cessful
attack
upon
Craney
island
by the
British

A second division of boats, 15 in number, contain-
ing a detachment of 500 men from the 102d regi-
ment, canadian chasseurs, and battalion-marines,
and about 200 seamen, the whole under the com-
mand of captain Samuel John Pechell, of the San-
Domingo, arrived, at about 11 A. M., off the north-
west side of the island, directly in front of the battery
manned by the Constellation's men. Great differ-
ence of opinion prevailed among the officers engaged
in the expedition, about the propriety of making the
attack at that time of tide, it being then the ebb.
Captains John Martin Hanchett, of the Diadem, the
honourable James Ashley Maude, of the Nemesis,
and Romilly of the engineers, were decidedly against
it. Captain Pechell was for it; and he, being the
senior officer, carried his point. Captain Hanchett
then volunteered to lead the boats to the attack;
which he was permitted to do. Captain Hanchett's
boat was the Diadem's launch, carrying a 24-pounder
carronade, the only boat so armed in the division.
He had taken his station about 60 yards ahead of
the other boats; and was pulling, under a very
heavy and long-continued fire from the batteries,
directly in front of them, when his boat unfortunately
took the ground, at the distance of about 100 yards
from the muzzles of the enemy's guns. At that
instant one of the seamen, having plunged his boat-
hook over the side, found three or four feet of slimy

1813. mud at the bottom. A check being thus effectually
June. given to a daring enterprise, in which all were so ready to join, captain Hanchett waved his hat for the boats astern to keep afloat. In the hurry of pulling and the ardour of the men, this warning was disregarded; and one or two of the boats grounded. Two others, owing to their having received some shot that had passed through the sails of the Diadem's launch, sank.

Capt. Hanchett wounded.
In the mean while the Americans at the battery, well aware of the shoal, had anticipated what had happened; and, feeling their own security, poured in their grape and canister with destructive effect. A 6-pound shot, which had passed through a launch on the starboard side of captain Hanchett's boat, and killed and wounded several men, struck that officer on the hip, and he instantly fell; but was quickly on his legs again. While he was assisting to save the men that were struggling in the water, in consequence of their boat having been sunk, a langridge shot entered his left thigh. While, also, the men from the sunken boats, and who consisted chiefly of the canadian chasseurs, or Independent Foreigners, were struggling for their lives in the water and mud, the Constellation's marines, and the american infantry, waded a short distance into the water, and deliberately fired at them. Huddled together, as the boats were when they struck the ground, and that within canister-range of a battery which kept upon them an incessant fire of more than two hours' duration, it required no very expert artillerists to sink three of the boats, and to kill three men and wound 16; especially when aided by the muskets of those humane individuals who waded into the water to fire at the drowning crews. Including 10 seamen, 62 were officially reported as missing. Of these, it appears, 40 gained the shore, and "deserted" to the Americans. As more than that number of missing appear to have belonged to the two foreign companies, this creates no surprise; especially, as the

only alternative left to the men was to become prisoners of war. 1813.
June.

The policy of attacking Craney island, as a means of getting at Norfolk, whither the Constellation frigate had retired for shelter on the first arrival of the British in the Chesapeake, has been much questioned; but there can be only one opinion, surely, about the wisdom of sending boats, in broad daylight, to feel their way to the shore, over shoals and mud-banks, and that in the very teeth of a formidable battery. Unlike most other nations, the Americans in particular, the British, when engaged in expeditions of this nature, always rest their hopes of success upon valour rather than numbers. But still, had the veil of darkness been allowed to screen the boats from view, and an hour of the night chosen, when the tide had covered the shoals with deep water, the same little party might have carried the batteries; and a defeat, as discreditable to those that caused, as honourable to those that suffered in it, might have been converted into a victory. As it was, the affair of Craney island, dressed up to advantage in the american official account, and properly commented upon by the government-editors, was hailed throughout the union as a glorious triumph, fit for Americans to achieve.

On the night of the 25th of June, the effective men of the 102d regiment, canadian chasseurs, and battalion-marines; also, three companies of ship's marines, the whole amounting to about 2000 men, commanded by major-general Beckwith, embarked in a division of boats, placed under the orders of rear-admiral Cockburn, and, covered by the brig-sloop Mohawk, and the launches of the squadron. About half an hour before daylight on the 26th, the advance, consisting of about 650 men, along with two 6-pounders, under lieutenant-colonel Napier, landed two miles to the westward of Hampton, a town about 18 miles from Norfolk, and separated from it by Hampton roads. Shortly afterwards, the

pton.

1813. main body, consisting of the royal marine-battalion
 June. under lieutenant-colonel Williams, landed ; and the whole moved forward. As might be expected, the town, and its seven pieces of cannon, fell into the hands of the British, after a trifling loss of five killed, 33 wounded, and 10 missing. The Americans admit a loss of seven killed, 12 wounded, 11 missing, and one prisoner.

Atroci- A subject next presents itself for relation, upon
 ties which it is painful to proceed. As soon as the
 com- Americans were defeated, and driven from Hampton,
 mitted the british troops, or rather, the foreign troops,
 by the for they were the principals, forming part of the
 the invaders at advanced force, commenced perpetrating upon the
 Hamp- defenceless inhabitants acts of rapine and violence,
 ton. which un pitying custom has, in some degree, rendered inseparable from places that have been carried by storm ; but which are as revolting to human nature, as they are disgraceful to the flag that would sanction them. The instant these circumstances of atrocity reached the ears of the british commanding officer, orders were given to search for, and bring in, all the canadian chasseurs distributed through the town ; and, when they were so brought in, a guard was set over them. The officers could do no more : they could not be at every man's elbow, as he roamed through the country in search of plunder ; and plunder the soldier claims as a right, and will have, when the enemy has compelled him to force his way at the point of the bayonet.

Great- No event of the war was so greeted by the
 ly ex- government editors, as the affair at Hampton. All
 agge- the hireling pens in the United States were put in
 rated by requisition, until tale followed tale, each outdoing
 the the last in horror. The language of the brothel was
 ameri- exhausted, and that of Billingsgate surpassed, to
 can de- invent sufferings for the american women, and terms
 mocratic of reproach for their " british " ravishers. Instances
 writers. were not only magnified, but multiplied, tenfold ; until the whole republic rang with peals of execra-

tion against the british character and nation. A few of the boldest of the anti-government party stood up to undeceive the public ; but the voice of reason was drowned in the general clamour, and it became as dangerous, as it was useless, to attempt to gain a hearing. The "George-town Federal-Republican," of July 7, a newspaper published just at the verge of Washington city, and whose editor possessed the happy privilege of remaining untainted amidst a corrupted atmosphere, contained the following account : "The statement of the women of Hampton being violated by the British, turns out to be false. A correspondence, upon that subject and the pillage said to have been committed there, has taken place between general Taylor and admiral Warren. Some plunder appears to have been committed, but it was confined to the french troops employed. Admiral Warren complains, on his part, of the Americans, having continued to fire upon the struggling crews of the barges, after they were sunk."

subject
by a
federal
editor.

On the 11th of July sir John Warren detached rear-admiral Cockburn, with the Sceptre 74, into which ship he had now shifted his flag, the Romulus, Fox, and Nemesis, frigates armed en flûte, the Conflict gun-brig, and Highflyer and Cockchafer tenders, having on board the 103d regiment, of about 500 rank and file, and a small detachment of artillery, to Ocracoke harbour, on the North-Carolina coast, for the purpose of putting an end to the commerce carried on from that port by means of inland navigation, and of destroying any vessels that might be found there. During the night of the 12th, the squadron arrived off Ocracoke bar ; and, at 2 A. M. on the 13th, the troops were embarked in their boats ; which, accompanied by the Conflict and tenders, pulled in three divisions towards the shore. Owing to the great distance and heavy swell, the advance division, commanded by lieutenant Westphal, first of the Sceptre, did not reach the shoal-point of the harbour, behind which two large armed

 vessels.

The instant the british boats doubled the point, they were fired upon by the two vessels; but lieutenant Westphal, under cover of some rockets, pulled directly for them, and had just got to the brig's bows, when her crew cut the cables and abandoned her. The schooner's colours were hauled down by her crew about the same time. The latter vessel proved to be the Atlas letter of marque, of Philadelphia, mounting 10 guns, and measuring 240 tons; the former, the Anaconda letter of marque, of New-York, mounting 18 long 9-pounders, and measuring 387 tons. In the course of the morning the troops were landed, and took possession of Ocracoke and the town of Portsmouth, without the slightest opposition. The inhabitants behaved with civility, and their property, in consequence, was not molested. After remaining on shore for two days, rear-admiral Cockburn, with the troops and seamen, reembarked without loss or molestation. Not, as it would appear, because he had performed the service intrusted to him, but, on account of his "not feeling himself competent to the attack on Newburn, now that its citizens were preparing to receive him." No sooner had the british soldiers and seamen departed, than the american militia flocked to the post; thus presenting us with a new system of military defence. Both the prizes were afterwards added to the british navy, the Anaconda, by her own name, as an 18-gun brig-sloop, and the Atlas, by the name of St.-Lawrence, as a 14-gun schooner.

Contest
 and
 Mohawk
 chase
 two
 american
 gun-boats

On the 11th of July, at 9 A.M., the two United States' gun-vessels Scorpion and Asp got under way from Yeocomico river, but soon afterwards were chased back by the british brig-sloops Contest, captain James Rattray, and Mohawk, captain the honourable Henry Dikkes Byng. The two brigs then came to anchor off the bar; and, seeing that one of

the two enemy's vessels, a schooner, was considerably in the rear of her consort, captain Rattray despatched in pursuit of her the cutter of each brig, under the orders of lieutenant Roger Carley Curry, assisted by lieutenant William Hutchinson, and by midshipmen George Morey, — Bradford, and Caleb Evans Tozer.

1813.
July.

into
Yeo-
comico
river.

Lieutenant Curry pushed up the narrow inlet of Yeocomico, and, when about four miles from the entrance, found the american schooner, which was the Asp, of one long 18-pounder, two 18-pounder carronades and swivels, hauled up close to the beach, under the protection of a large body of militia. The british boats, however, persevered in their attack, and after a smart struggle, in which they had two men killed and lieutenant Curry and five men wounded, carried the vessel. The american commanding officer, lieutenant Segourney was killed, and nine out of his 25 in crew were either killed or wounded. The British set fire to the Asp, but not effectually, as the Americans afterwards extinguished the flames and preserved the vessel.

Asp.

In the month of July captain Sanders, with his frigate the Junon, and the ship-sloop Martin, captain Humphrey Fleming Senhouse, of 16 carronades, 24-pounders, and two long nines, was stationed in Delaware bay. On the 29th, about 8 A. M., the Martin grounded on the outer ridge of Crow's shoal, within two and a half miles from the beach; and, it being a falling tide, could not be floated again before the return of flood. The water ran so shoal, that it became necessary to shore the ship up; and the same cause prevented the Junon from afterwards anchoring nearer to the Martin than a mile and three quarters. This afforded to the flotilla of american gun-boats and block-vessels then in the Delaware, a fine opportunity to destroy the british sloop. They accordingly, 10 in number, advanced, and deliberately took up an anchorage about a mile and three quarters distant, directly on

Martin
gets on
shore
in the
De-la-
ware.

1813. the Martin's beam, on the opposite side to the Junon,
 July. and so as to bring the latter in a line with the sloop.
 Thus, by anchoring at the distance of three miles
 from the frigate, which, it was well known, could not
 approach nearer on account of the shoals, the
 american gun-boats had no force but the Martin's to
 contend with.

Is at-
 tacked

 can
 gun-
 boats.
 All this while, crowds of citizens, on foot, on
 horseback, and in carriages, were hastening to the
 beach, in the hope to see verified, in the speedy
 destruction of the Martin, the wonderful accounts
 they had heard of american prowess on the ocean.
 The Martin got her topgallantmasts struck, and
 her sails furlled; and, although he despaired of
 saving his ship from so formidable a force, captain
 Senhouse resolved to defend her to the last ex-
 tremity. The gun-boats commenced the fire, and
 the Martin returned it, at first with her carronades;
 but, finding they could not reach, captain Senhouse
 had the two 9-pounders transported from their ports,
 one to the topgallant fore-castle, the other to the
 poop. Between these two guns, and all the guns of
 the american flotilla, was the fire maintained for
 nearly two hours, without the slightest injury to the
 Martin. At about 2 P. M. the sternmost gun-boat in
 the line having separated a little from the rest, cap-
 tain Sanders made the signal for the boats manned
 and armed. Accordingly, three boats were de-
 spatched from the Martin, containing 40 officers and
 men, and four from the Junon, containing 100
 officers and men, the whole under the orders of the
 Junon's first lieutenant Philip Westphal. On the
 approach of the boats, the gun-vessels turned their
 fire from the Martin against them, but at too great a
 distance to be effective. The single gun-boat, which
 was the principal object of attack, kept up a spirited
 fire, but was quickly boarded and overpowered.
 The british boats, in this affair, lost three killed and
 mortally wounded, and four slightly wounded; the
 gun-boat, seven wounded. The last discharge from

Boats

 gun-
 boats.

the gun, mounted on board the gun-boat, broke its carriage. That prevented the British from returning the fire of the remaining gun-boats, which had dropped down in line, hoping to retake the prize; but which the captors towed off in triumph. As, in their attempt to save their companion, the gun-boats passed the bow of the Martin, the sloop fired upon them with effect; and the Junon opened her fire, but her shot scarcely fell beyond the Martin.

1813.
July.

Some of the gun-boats having grounded, the remainder anchored for their mutual protection. The tide had drifted the ship's boats, as well as the captured vessel, to a considerable distance. The gun-boats that had grounded got off, and the whole, as if to renew the attack upon the change of tide, anchored within two miles and a half of the Martin, now weakened by the absence of 40 of her best hands. However, at 5 P. M., to the surprise of the Martin's officers and crew; and, as it afterwards appeared, to the extreme mortification of the spectators on shore, this formidable flotilla weighed and beat up, between the Martin and the shore, without further molesting her, and arrived in safety, soon afterwards, at their station near the mouth of the river.

Re-
main-
der of

can
flotilla
retire
from
the
action.

The force, that attacked the Martin, consisted of eight gun-boats and two block-vessels. The latter were sloops of 100 tons each, which had been coasters. Their sides had been raised, heavy beams laid across, and the whole planked in, on the top, on each side, and at the ends; leaving only loopholes for musketry, (through which pikes might be used in repelling boarders,) and three ports of a side: in these were mounted six long 18-pounders. The covering extended the whole length of the vessel, and was large enough to contain 60 men, the number stated as the complement of each. The gun-boats were sloop-rigged vessels, averaging about 95 tons, and mounted each a long 32, and a 4 pounder on traversing carriages, with a complement of 35 men, the exact number found on board the prize.

Force
that at-
tacked
the
Martin

1813. Each gun-boat and block-vessel was commanded by
 May, an experienced merchant-master; and the whole
 flotilla by master-commandant Samuel Angus, of
 the United-States' navy.

Com- On the 24th of May the frigate United-States,
 mo- still commanded by commodore Decatur, accom-
 dore panied by the 18-pounder 36-gun frigate Mace-
 Deca- donian, captain Jacob Jones, and 18-gun ship-sloop
 tur Hornet, captain James Biddle, all provisioned and
 sails stored for a cruise in the East Indies, quitted the
 from New-York. harbour of New-York through Long-island Sound,
 the Sandy-Hook passage being blockaded by a
 british force. Having found in his ship a disposition
 to *hog*, commodore Decatur had put on shore six of
 his carronades; thus reducing the force of the
 United-States from 54 to 48 guns. It was, however,
 asserted, and, we believe, stated in the New-York
 papers, that the commodore had taken on board eight
 medium or columbiad 32-pounders, and sent an equal
 number of 24-pounders from his four 'midship ports
 on each side to the Macedonian; and that, of the
 latter's eight long 18-pounders removed to make
 room for the 24s, two were mounted on board the
 Hornet in lieu of her 12-pounders.

Just as the United-States, towards evening,
 arrived abreast of Hunt's point, her mainmast was
 struck by lightning. The electric fluid tore away
 the commodore's broad pendant and cast it upon
 the deck: it then passed down the after-hatchway,
 through the wardroom into the doctor's cabin, put
 out his candle and tore up his bed, and, entering
 between the skin and ceiling of the ship, ripped off
 two or three sheets of copper just at the water's
 edge. No further trace of it could be discovered.
 The Macedonian, who was about 100 yards astern
 of the United-States, on seeing what had happened,
 hove all aback, to save herself from the justly
 dreaded explosion of the latter. Fortunately, not a
 man was hurt on the occasion. Commodore Decatur
 soon afterwards anchored under Fisher's island, near

 island.

the entrance of New-London river, to be ready for 1813.
a start the first opportunity.

On the 1st of June, very early in the morning, the
american squadron got under way and stood out to
sea; but at 9 A. M., just as they were clearing the
Sound, the ships were discovered by the british
74-gun ship Valiant, captain Robert Dudley Oliver,
and 18-pounder 40-gun frigate Acasta, captain
Alexander Robert Kerr. The two british ships
gave chase, and the three american ships put back;
both parties hauling to the wind under all sail. At
about 1 h. 30 m. P. M. the american squadron bore
up for New-London; and the United-States and
Hornet, being too deep for their trim, started their
water and threw overboard a part of their provi-
sions. At 2 h. 15 m. P. M., being far ahead of the
Valiant, and just within gun-shot of the United-
States, the Acasta fired a bow-chaser at the latter,
just as the Macedonian was rounding New-London
lighthouse. The United-States returned the shot
with one from her stern. Instead, however, of bringing
to and trying to cut off the british frigate from her
consort, as many of the spectators on shore expected
to see done, commodore Decatur stood on, and an-
chored with his squadron in the river. Having
shortened sail, the Acasta hauled to the wind, and
tacked, and soon afterwards, along with the Valiant,
anchored off Gardner's island, distant about 12 miles
from New-London.

Having no persons on board acquainted with the
navigation of the Sound, the british ships, particu-
larly the 74, chased with much less effect than they
otherwise would. It was not, of course, known to
captain Oliver, that he might even have followed
the american squadron into New-London; and that,
had the United-States and her companions ascended
the river beyond his reach, he might, with very little
risk, there being no battery of any consequence,
have placed the Valiant and Acasta against the

June.

American
version
of the
business.

For several weeks previous to this event, the New-York and Boston papers had been filled with panegyrics on their "naval heroes," whose valour they depicted as impetuous, amounting almost to rashness. Some of the papers, as if a little ashamed of what they had said, now added "a rasée" to the two british ships, and gave that as a reason that the american commodore suffered his squadron to be chased into New-London.

Two
New-
York
mer-
chants
fit out

plosion
vessel
to de-
stroy
Ra-
millies.

In a week or two afterwards two merchants of New-York, encouraged by a promise of reward from the american government, formed a plan for destroying the british 74-gun ship Ramillies, captain sir Thomas Masterman Hardy, as she lay at anchor off Fisher's island. A schooner named the Eagle was laden with several casks of gunpowder, having trains leading from a species of gunlock, which, upon the principle of clockwork, went off at a given period after it had been set. Above the casks of powder, and in full view at the hatchway, were some casks of flour, it being known at New-York that the Ramillies was short of provisions, and naturally supposed that captain Hardy would immediately order the vessel alongside, in order to get the ship's wants supplied.

Schoo-
ner
sails
and is
taken
by one
of her
boats.

Thus murderously laden, the schooner sailed from New-York and stood up the Sound. On the 25th, in the morning, the Eagle approached New-London, as if intending to enter that river. The Ramillies detached a boat, with 13 men under lieutenant John Geddes, to cut her off. At 11 A. M. lieutenant Geddes boarded the schooner, and found that the crew, after having let go her only anchor, had abandoned their vessel and fled to the shore. The lieutenant brought the fatal prize near to the Ramillies, and sir Thomas ordered him to place the vessel alongside of a trading sloop, which had been

recently captured and lay a short distance off. The lieutenant did as he was ordered; and at 2 h. 30 m. p. m., while he and his men were in the act of securing her, the schooner blew up with a tremendous explosion. The poor lieutenant, and 10 of the fine fellows who were with him, perished; and the remaining three men escaped only with being shockingly scorched.

1813.

Explodes and kills a lieutenant and 10 men.

We shall not trust ourselves to comment upon this most atrocious proceeding. In the following remarks on the subject by a contemporary, we perfectly concur: "A quantity of arsenic among the food would have been so perfectly compatible with the rest of the contrivance, that we wonder it was not resorted to. Should actions like these receive the sanction of governments, the science of war, and the laws of nations, will degenerate into the barbarity of the Algerines; and murder and pillage will take place of kindness and humanity to our enemies."*

Remarks on the subject

The northern frontier of the United States, as is almost too well known to need repetition, bounds on the british provinces of Upper and Lower Canada. The line, or barrier, as far as we need take notice of it, consists of a rapid river, the St.-Lawrence, and the navigable lakes Ontario, Erie, and Huron. From Quebec to Kingston, which stands at the entrance of Lake Ontario, the distance is about 180 miles, but the water communication is interrupted by shoals and rapids. Lake Ontario is about 180 miles long and 50 broad, and is navigable for ships of any burden. The strait of Niagara, in length about 36 miles, but interrupted at one part by its famous falls, connects Ontario with Lake Erie; which is about 220 miles in length, and about 40 broad, and is also navigable for large ships. Of Lake Huron, it will suffice to say, that it is connected with Erie by the river Detroit; on which river stands the british post of Amherstburgh, distant just 800 miles from Quebec.

Some account of the boundary between the United States and British provinces.

* Brenton, vol. v. p. 120.

1813. The regular force, scattered over the Canadas at the breaking out of the war, consisted of between 4000 and 5000 men, chiefly fencible and veteran or invalid troops. The british commander in chief was lieutenant-general sir George Prevost. Ontario was the only lake that contained any armed vessels belonging to the British. These consisted of the Royal-George, a ship of 340 tons, mounting 20 guns, a brig of 14 guns, and two or three smaller vessels; all manned by Canadians, and commanded by a provincial officer, named Earle. The force of the Americans on this lake, at the commencement of the war, consisted of only one solitary brig, the Oneida, of 16 guns, commanded by lieutenant Melancthon Thomas Woolsey, of the national navy. The principal port of the British was Kingston; that of the Americans, Sackett's-Harbour.

mander
on Lake
Ontario

On the 15th of July, 1812, commodore Earle, with his squadron, appeared off Sackett's-Harbour, with the avowed intention of taking or destroying the Oneida; but a fire from two or three guns, mounted on a point of land near the harbour's mouth, was sufficient to deter the canadian (we will not call him british) commodore from attempting that, with his five vessels, which the Royal-George alone, well manned and appointed, might easily have accomplished. Emboldened by the dastardly behaviour of his opponent, lieutenant Woolsey fitted out a captured british merchant schooner with one long 32-pounder and two sixes; and, manning her with about 30 seamen and a company of riflemen to act as marines, sent her, under the command of lieutenant Henry Wells, to Ogdensburg, on the St.-Lawrence. On her way thither, the Julia encountered, and actually beat off without losing a man, the Moira of 14, and the Gloucester of 10 guns.

Notwithstanding the glaring incompetency of Earle, sir George Prevost neither removed nor censured him. About this time the british 20-gun ship

Apathy
of sir
George
Prevost

Tartarus, captain John Pasco, arrived at Quebec ^{1813.} from Halifax; and, had the governor-general of ^{Oct.} British America but given his sanction to the measure, the captain would have laid his ship up, and, with his officers and men, have proceeded straight to Kingston, and superseded Earle in the command of the squadron. Instead of this, an attempt was made to hire sailors at Quebec, at one half of the wages which the merchants were giving; as if sailors could be of any use, without an officer capable, or willing, (for, we believe, Earle, as well as sir George, was born on the wrong side of the boundary line,) to lead them against the enemy.

In the month of October, 1812, commodore Isaac Chauncey arrived at Sackett's-Harbour, as commander in chief; and, having brought with him a number of officers, and between 400 and 500 prime <sup>Com-
mo-
dore
Chaun-
cey
takes
com-
mand
on Lake
Ontario</sup> sailors, from the atlantic frontier, was enabled, by the 6th of November, to appear on the lake with the Oneida and six fine schooners, mounting altogether 48 guns, including several long 24 and 32 pounders; and many of the guns, being mounted on pivot or traversing carriages, were as effective as double the number. With this comparatively formidable force, commodore Chauncey chased the Royal-George into Kingston, cannonaded the town and batteries, and possessed the entire command of the lake. On the 26th of November the Madison, a fine ship of 600 tons, pierced to carry 24 guns on a flush deck, was launched at Sackett's-Harbour; and, as soon as she was fitted, the commodore shifted his broad pendant to her. Soon afterwards sir George Prevost ordered two ships of war to be built, to mount 24 guns each; one at Kingston, the other at York, an unprotected port at the opposite extremity of the lake.

On Lake Erie, while the Americans possessed only one armed vessel, the Adams, a small brig mounting six 6-pounders, the british colonial authorities, by hiring or purchasing some merchant <sup>British

can
forces
on Lake
Erie.</sup> vessels and arming them, had assembled a force;

1813. consisting of one ship of 280 tons, the *Queen-Charlotte*, mounting 16 light carronades, a brig of 10 guns, a schooner of 12, and three smaller vessels, mounting between them seven guns. These six vessels were manned by 108 Canadians, and subsequently by 160 soldiers in addition. On the 16th of July, at the surrender of Detroit, the *Adams* fell into the hands of the British, and was afterwards named the *Detroit*, and sent down the lake, manned by a small canadian crew. Early in the month of October, 1812, the american government sent lieutenant Jesse D. Elliot, and between 50 and 60 petty-officers and seamen, to superintend the construction of some schooners at Black-Rock. On the 9th lieutenant Elliot, with the whole of his seamen and about 50 soldiers, boarded and carried the *Detroit*, and a merchant brig, the *Caledonia*, of one or two swivels, in her company. The former the Americans were afterwards obliged to burn, to save her from falling into the hands of a detachment of soldiers from Fort Erie; but the *Caledonia* and her valuable cargo, they carried safe to Black-Rock.

Capture from the British of the *Detroit* and *Caledonia*.

On the 25th of April, 1813, having received a reinforcement of seamen, commodore Chauncey sailed from Sackett's-Harbour with his fleet, now augmented to 10 vessels, on board of which was a body of troops under general Dearborn, to attack the port of York, and destroy the ship of war there building. The Americans landed and drove away the few british troops at the post; but, previously to their retreat, the latter saved the Americans the trouble of burning the ship on the stocks, by destroying her themselves. Commodore Chauncey took away a considerable quantity of naval stores and a small unserviceable 10-gun brig, the *Gloucester*, and returned to Sackett's-Harbour in triumph.

Commodore Chauncey makes a successful attack on York, &c.

On the 6th of May the british troop-ship *Woolwich*, captain Thomas Ball Sullivan, arrived at Quebec from Spithead, having on board captain sir James Lucas Yeo, four commanders of the navy—eight lieutenants, 24 midshipmen, and about 45

Arrival of sir James Yeo, officers &c.

picked seamen, sent out by government expressly for service on the Canada lakes. Such was the zeal of the officers and men to get to the scene of action, that they departed, the same evening, in schooners for Montreal. In four or five days they reached Kingston; and, although the number of seamen was not half enough to man the vessels in the harbour, now augmented by the 24-gun ship Wolfe, launched on the 5th or 6th of May, sir James Yeo, with the aid of the provincial sailors already on the lake, and of a few companies of soldiers, was ready, by the end of the month, to put to sea with two ships, one brig, and three schooners, besides a few small gun-boats.

Sir George Prevost now allowed himself to be persuaded to embark 750 troops on board the squadron, for the purpose of making an attack upon Sackett's-Harbour; but, to mar the successful issue of the plan, he resolved to head the troops himself. On the 27th of May, when an excellent opportunity was afforded by the absence of the american squadron at the opposite end of the lake, the british squadron, in high glee, sailed from Kingston, and with a fair wind stood across to the enemy's dépôt. At noon the squadron arrived off Sackett's-Harbour, and lay to, with every thing in readiness for the troops to disembark. Sir George hesitated, looked at the place, mistook trees for troops, and block-houses for batteries, and ordered the expedition to put back.

Just as the ships had turned their heads towards Kingston, and, with the wind now changed, were beginning to sail before it, about 50 Indians brought off a party of american soldiers from the shore near Sackett's-Harbour. Encouraged by this, sir George permitted the squadron to begin working its way back to the american port. On the morning of the 29th some of the lighter vessels got close to the shore, and the troops were landed. They drove the Americans like sheep, compelled them to set fire to

1813.
May.

He embarks troops and sails to attack Sackett's-Harbour.

Disgraceful behaviour of sir George Prevost and abandonment of the enterprise.

1813. the General-Pike, a new frigate on the stocks, the
 May. Gloucester, captured at York, and a barrack containing, among other valuable articles, all the naval stores taken on the same occasion. At this moment some resistance unexpectedly made at a log barrack caused the british commander in chief to sound a retreat. The indignant, the victorious, officers and men were obliged to obey the fatal bugle, and the British retired to their vessels; and the Americans, as soon as they could credit their senses, hastened to stop the conflagration. The General-Pike, being built of green wood, was saved; but the Gloucester, and the barrack containing the stores, were entirely consumed.

The letter he caused to be written on the subject That sir George Prevost was as fond of writing official letters, as he was of substituting the first personal pronoun for the third, has already appeared in these pages;* but, in the present instance, contrary to all precedent, he required his adjutant-general, colonel Edward Baynes, to pen the despatch. That obedient gentleman did so; and the european public scarcely knows at this hour, through whose fault it was, that Sackett's-Harbour was not taken from the Americans in May, 1813. The canadian public, besides being in the secret, were less surprised at the result of the enterprise; because they knew that sir George, a few months before, had rejected an excellent opportunity of marching across the ice to Sackett's-Harbour, and destroying the whole american lake-navy at a blow.

Sir James Yeo attacks an american encampment, expels troops, On the 3d of June sir James Yeo sailed from Kingston with his squadron, composed of the ship Wolfe, of 23 guns and 200 men, ship Royal-George, of 21 guns and 175 men, brig Melville, of 14 guns and 100 men, schooners, Moira, of 14 guns and 92 men, Sidney-Smith, of 12 guns and 80 men, and Beresford, of eight guns and 70 men, together with a few gun-boats. On the 8th, at daylight, the

* See vol. v. p. 302.

squadron arrived in sight of the american camp at ^{1813.}Forty-mile creek; but, as it was calm, the only ^{June.}vessels that could get close to the shore were the Beresford, captain Francis Brockell Spilsbury, and the gun-boats, commanded by lieutenant Charles ^{takes}Anthony, first of the Wolfe. A spirited attack by ^{off}the schooner and gun-boats compelled the american troops to make a precipitate retreat, and all their camp equipage, provisions, and stores fell into the hands of the British. Sir James then landed the troops that were on board his squadron, and steered to the westward. On the 13th he captured two american schooners and some boats containing supplies. Receiving information from the prisoners, that there was a dépôt of provisions at Genessee river, sir James proceeded thither; and, landing some seamen and marines, brought off the whole. On the 19th he took another supply of provisions from Great Sodus, and on the 29th reanchored in Kingston. ^{&c.}

All this while commodore Chauncey was waiting at Sackett's-Harbour for the General-Pike to be got ready for sea. At length, towards the latter end of July, that fine ship was armed, manned, and stored. The Pike alone was nearly a match for the whole of sir James Yeo's squadron: she measured about 850 tons, and mounted 26 long 24-pounders on a flush deck, another 24-pounder on a pivot-carriage upon her forecastle, and a second, similarly mounted, upon her quarterdeck; and her crew, including some soldiers serving as marines, amounted to 400 men. With this ship, the Madison, Oneida, and 11 fine schooners, commodore Chauncey sailed from Sackett's-Harbour for the head of the lake. On the 8th of August, in the morning, while the american fleet lay at anchor off Fort Niagara, the british squadron hove in sight; and, that a better opinion may be formed of the situation of the parties, we will state the force of each. The British had six vessels, mounting 92 guns; of which, two were long 24-pounders, 13, long 18-pounders, five, long 12 and 9 pounders, and 72,

1813. carronades of different calibers, including six 68-pounders; and the vessels were manned with 717 officers and men. The Americans, by their own admission, had 14 vessels, armed, also by their admission, with 114 guns; of which, seven were long 32-pounders, 32, long 24-pounders, eight, long 18-pounders, 19, long 12 and 9 pounders, and 48, carronades, 40 of which were 32 and 24 pounders. Nearly one fourth of the long guns and carronades were on pivot-carriages, and were consequently as effective in broadside as twice the number. The 14 american vessels, thus armed, were manned with 1193 officers and men.

ners by
sir
James. Commodore Chauncey immediately got under way, and stood out, with his 14 vessels, formed in line of battle; but, as the six british vessels approached, the american vessels, after discharging their broadsides, wore and stood under their batteries. Light airs and calms prevented sir James Yeo from closing; and during the night, in a heavy squall, two of the american schooners, the Hamilton and Scourge, upset, and their crews unfortunately perished. On the 9th the two parties were again in sight of each other, and continued manœuvring during that and the succeeding day. On the 10th, at night, a fine breeze sprang up, and sir James Yeo immediately took advantage of it, by bearing up to attack his powerful opponent; but, just as the Wolfe got within gun-shot of the Pike and Madison, these two powerful american ships bore up, fired their stern-chase guns, and made sail for Niagara; leaving two fine schooners, the Julia and Growler, each armed with one long 32 and one long 12 pounder on pivots, and manned with a crew of 40 men, to be captured without an effort to save them. With his two prizes, and without the loss of a man, and with no greater injury to his ships than a few cut ropes and torn sails, sir James Yeo returned to Kingston.

The "United States' Gazette," of September 6, gave a letter from one of the General-Pike's officers.

The writer, having previously stated the american force at two ships, one brig, and 11 schooners, says :
 "On the 10th, at midnight, we came within gun-shot, every one in high spirits. The schooners commenced the action with their long guns, which did great execution. At half past 12, the commodore fired his broadside, and gave three cheers, which was returned from the other ships, the enemy closing fast. We lay by for our opponent, the orders having been given, not to fire until she came within pistol-shot, though the enemy kept up a constant fire. Every gun was pointed, every match ready in hand, and the red british ensign plainly to be descried by the light of the moon ; when, to our utter astonishment, the commodore wore, and stood S. E., leaving sir James Lucas Yeo to exult in the capture of two schooners, and in our retreat ; which was certainly a very fortunate one for him." No wonder, an order soon afterwards issued from Washington, that no officer should write, with the intention of publication, accounts of the operations of the fleet and army. Sir James could not have had his assertions more ably supported, than they were by the Pike's officer. The latter was mistaken, however, as to any "execution" having been done by the american squadron. The captured schooners of course made no resistance ; although the american editors trumped up a story about their desperate defence ; how they tore and ripped up the enemy, &c.

The Pike's officer has described two other "chases," differing chiefly from the last, in no loss having been suffered, or even shot fired. He says : "We proceeded directly for Sackett's-Harbour ; where we victualled ; and put to sea, the next day after our arrival, August 14. On the 16th, we discovered the enemy again, again hurried to quarters ; again got clear of the enemy by dint of carrying sail, and returned to Sackett's-Harbour. On the 18th we again fell in with the enemy steering for Kingston, and we reached the harbour on the 19th. This is the result

1813.

June.

1813. of two cruises; the first of which, by proper guidance,
 Sept. might have decided in our favour the superiority on
 the lake, and consequently in Canada." This is what
 many of the american editors called, "chasing the
 british commander all round the lake." Commodore
 Chauncey, although he had lost four of his 14 vessels,
 appeared in September with 11 sail; having brought
 out with him, the schooner Elizabeth, of about the
 same force as the Growler or Julia, and the new
 schooner Sylph, mounting, at that time, four long
 32-pounders upon pivot-carriages, and four long
 sixes. This schooner was described by the Americans
 as upwards of 400 tons. She was afterwards con-
 verted into a brig.

A
 second
 skir-
 mish
 be-
 tween
 the two
 com-
 mo-
 dores.

On the 11th of September, while the british
 squadron lay becalmed off Genessee river, the ame-
 rican fleet of 11 sail, by the aid of a partial wind,
 succeeded in getting within range of their long 24
 and 32 pounders; and during five hours cannonaded
 the British, who did not fire a carronade, and had
 only six guns in all the squadron that could reach
 the enemy. At sunset a breeze sprang up from the
 westward, when sir James steered for the american
 fleet; but the american commodore avoided a close
 meeting, and thus the affair ended. It was so far
 unfortunate for sir James Yeo, that he had a mid-
 shipman (William Ellery) and three seamen killed
 and seven wounded. In his official letter on the
 subject of this action, commodore Chauncey most
 uncandidly says: "I was much disappointed that
 sir James refused to fight me, as he was so much
 superior in point of force, both in guns and men,
 having upwards of 20 guns more than we have, and
 heaves a greater weight of shot."

A third
 partial
 en-
 gage-
 ment.

Another partial engagement took place on the
 28th of September. Commodore Chauncey, having
 the weathergage, kept his favourite distance, and
 one of his shot carried away the Wolfe's main top-
 mast; which, in its fall, brought down the mizen
 topmast and cross-jack yard. It was this, and not, as

Mr. Clark says, "a manœuvre of the commodore's," ^{1813.} that "threw the British in confusion." Even with ^{May.} this great advantage, commodore Chauncey would not venture within carronade-range. Mr. Clark, in describing this action, speaks of the british "frigate" Wolfe; upon which he had previously mounted "36 guns." Only two shot from the Americans did any material damage; the one already mentioned, and another that struck the Royal-George's fore topmast, which fell, upon her anchoring. Mr. Clark says: "Prudence forbad any further pursuit on the part of the Americans;" and the editor of the "History of the War" another american publication, adds: "The commodore was obliged to give up the chase; his ship was making water so fast, that it required all his pumps to keep her clear, and others of his vessels were much damaged. The General-Pike suffered a considerable loss of men; among whom were 22 killed or wounded, by the bursting of a gun." Other american accounts stated the commodore's loss in men, at upwards of 60 killed and wounded. It was therefore the damages and loss sustained by the american squadron, and not the "british batteries on Burlington heights," upon which not a musket was mounted, that "obliged the commodore to give up the chase." The effect produced by sir James's few long guns gave a specimen of what his carronades would have done, had his opponent allowed them to be used.

In the month of May, 1813, captain Robert Heriot Barclay was appointed to the command of the british flotilla on this lake; an appointment which had been declined by captain William Howe Mulcaster, another of sir James Yeo's commanders, on account of the exceedingly bad equipment of the vessels. These, owing to the loss of one of them, now consisted of five; and they were not equal in tonnage or force to a british 20-gun ship. With a lieutenant, and 19 rejected seamen of the Ontario squadron, captain Barclay, towards the middle of June, joined his

1813. enviable command; and, with the aid of the seamen he had brought, a ship was forthwith laid down at Amherstburgh, intended to be of 305 tons, and to mount as many as 18 guns.

Ame-
ricans
in-
crease
their
force
on this
lake.

Since the latter end of March captain Oliver Hazard Perry, of the United States' navy, had arrived at the port of Erie, with a numerous supply of officers and seamen, to equip a flotilla; and, by the time captain Barclay arrived, the american force consisted of one brig, the Caledonia, six fine schooners, and one sloop, mounting 15 heavy long guns, all on traversing carriages. Two brigs, of about 460 tons each, to mount 18 carronades, 32-pounders, and two long twelves, had also been laid down at Presqu'isle, and were in a state of some forwardness. The destruction of these vessels on the stocks would have enabled the British to maintain the ascendancy on the lake, and would have averted the fatal blow that was afterwards struck in this quarter. Colonel Proctor, the british commanding officer at Amherstburgh, saw this; as well as the facility with which the thing might be done, if sir George Prevost would send him the long promised supply of troops, and about 100 sailors. He wrote letter after letter to sir George on the subject, but all in vain. The latter, when he had exhausted his excuses, became petulant and rude. The two american brigs were launched; and, although they had to pass a bar, with their guns and stores out, and almost on their beam-ends, the Niagara and Lawrence, by the beginning of August, were riding on the lake, in readiness for action.

Diffi-
culty of
equip-
ping
british
ships
on Lake
Erie.

By the latter end of August the Detroit, as the new ship was named, was launched; and the next difficulty was to get guns for her. For this, the fort of Amherstburgh was stripped, and 19, of four different calibers, were obtained. It will convey some idea of the expense of hastily fitting vessels at this distance from home, to mention, that every round shot cost one shilling a pound for the carriage from

Quebec to Lake Erie, that powder was ten times as dear as at home, and that, for anchors, their weight in silver would be scarcely an over-estimate. But, were the Americans on this lake any better off? In five days an express reaches Washington. It would, under the most favourable circumstances as to weather and despatch in office, take as many months to get an article ordered from England, or even permission to stir a peg out of the common routine of service. The american vessels were therefore completely at home, while the british vessels were upwards of 3500 miles from home; penned up in a lake on the enemy's borders, inaccessible by water, and to which the land-carriage, for heavy articles, ordnance and naval stores especially, was most difficult and tedious.

Early in September, captain Barclay received a draught of seamen from the Dover troop-ship; and many of these would have scarcely rated as "ordinaries" on board the regular ships of war. He had now 50 british seamen to distribute among two ships, two schooners, a brig, and a sloop, armed altogether with 63 carriage-guns. It must have been the incredibility of this, that induced some of the british journals, in their account of the proceedings on this lake, to state "150," instead of 50 seamen. It is asserted, on the express authority of captain Barclay himself, that no more than 50 seamen were at any time on board the Lake Erie flotilla; the complements having been made up by canadian peasants and soldiers, men that, without disparagement to either, were sorry substitutes for british sailors. On the other hand, the ships of the Americans, as their newspapers informed us, were equipped in the most complete manner; and through the same channel we learned, that large draughts of seamen had repeatedly marched to Lake Erie from the sea-board. The best of riflemen were to be obtained on the spot. What else was required, to render the american

Capt. Barclay is forced to sail out to meet captain Perry.

On the 9th of September captain Barclay was lying, with his little squadron, in the port of Amherstburgh, anxiously waiting the arrival of a promised supply of seamen. Almost surrounded by hostile shores, his people on half-allowance of food, not another day's flour in store, a large body of Indians, whose friendship would cease, with the least abridgement in their accustomed supply, close in his rear; alike hopeless of succour and of retreat, what was captain Barclay to do? Impelled by dread of famine, and, not improbably, of indian treachery too, he sailed out in the evening, to risk a battle with an enemy's fleet, whose force he knew was nearly double his own.

Force of the two squadrons.

The following statement will place the fact of superiority beyond a doubt:

BRITISH.				AMERICANS.

But this is supposing, that the two squadrons were fitted in an equal manner; whereas, however incre-

dible it may appear, before they could fire a single great gun on board the *Detroit*, the men were obliged to discharge a pistol at the touch-hole! By adding 80 Canadians, and 240 soldiers from the Newfoundland and 41st regiments, to the 50 british seamen, the crew of commodore Barclay's squadron is made to amount to 345; whereas commodore Perry had picked crews to all his vessels, particularly on board the *Lawrence* and her sister-brig, and his total of men amounted to at least 580.

1813.

british
vessels.

On the 10th, soon after daylight, commodore Barclay discovered the american squadron at anchor in Put-in bay, and immediately bore up, with the wind from the south-west, to bring the enemy to action. Commodore Perry immediately got under way to meet the British; who, at 10 A. M., by a sudden shift of wind to south-east, were thrown to-leeward of their opponents. Commodore Barclay, who carried his broad pendant on board the *Detroit*, so stationed his vessels, that those which were the nearest to an equality of force in the two squadrons might be opposed together. The schooner *Chippeway*, commanded by master's mate J. Campbell, was in the van. Then came, in succession, the *Detroit* and *Queen-Charlotte*, the latter commanded by captain Robert Finnis, brig *Hunter*, lieutenant George Bignell, schooner *Lady-Prevost*, lieutenant Edward Buchan; and the sloop *Little-Belt*, by whom commanded we are not aware, brought up the rear.

of
battle.

At about 11 h. 45 m. A. M. the action began; and the *Detroit* became closely engaged with the *Lawrence*, commodore Perry's brig, supported by the schooners *Ariel* and *Scorpion*. Although the matches and tubes of the *Detroit* were so defective, that pistols were obliged to be fired at the guns to set them off, the seamen, Canadians, and soldiers plied their guns so well that, in the course of two hours, they knocked the *Lawrence* almost to pieces, and, after driving commodore Perry out of her, compelled her

Queen- In the mean time the Queen-Charlotte, with her
 Char- 24-pounder carronades, had been opposed by the
 lotte Niagara, supported, as the Lawrence had been, by
 surren- two schooners with heavy long guns. In a few
 ders. minutes captain Finnis was killed; and his successor
 in the command, lieutenant John Stokes, was struck
 senseless by a splinter. The next officer, provincial
 lieutenant Irvine, was without any experience, and
 therefore comparatively useless. The Queen-Charlotte
 soon afterwards struck her colours. From having
 kept out of the range of the Charlotte's carronades,
 the Niagara was a fresh vessel, and to her captain
 Perry proceeded. As soon as he got on board, the
 american commodore, accompanied by some of his
 schooners, bore down, and took a raking position
 athwart the bows of the already disabled Detroit. In
 a short time lieutenant John Garland, first of the
 Detroit was mortally, and captain Barclay himself
 most severely, wounded. The command then de-
 volved upon lieutenant George Inglis; who fought his
 ship in the most determined manner, until, out of
 the 10 experienced british seamen on board, eight
 or of escape had fled: he then ordered the colours
 of the Detroit to be struck. The Hunter and
 Lady-Prevost surrendered about the same time;
 as did the Chippeway and Trippe, as soon as some
 of the american vessels overtook them on their
 retreat.

Loss on The loss on the british side amounted to
 each three officers and 38 men killed, and nine officers
 side. and 85 men wounded. The officers killed were,
 lieutenant S. J. Garden, of the Newfoundland regi-
 ment, and John Garland, the first lieutenant, on

Niagara and
 schooners
 attack

 her
 and re-
 main-
 der of
 british
 flotilla
 to sur-
 render.

board the Detroit; and the captain of the Queen-Charlotte. The officers wounded were captain Barclay most dangerously in his left or remaining arm, Mr. John M. Hoffmeister, purser of the Detroit, lieutenant John Stokes, and midshipman James Foster, of the Queen-Charlotte, lieutenants Edward Buchan and Francis Roulette, and master's mate Henry Gateshill, of the Lady-Prevost, and master's mate, J. Campbell, commanding the Chippeway. The loss on the american side, as taken from captain Perry's letter, amounted to 27 killed and 96 wounded, including 22 killed and 61 wounded on board the Lawrence.

The fact of this brig having surrendered is admitted by captain Perry himself, in the following words: "It was with unspeakable pain, that I saw, soon after I got on board the Niagara, the flag of the Lawrence come down, although I was perfectly sensible that she had been defended to the last, and that to have continued to make a show of resistance, would have been a wanton sacrifice of her brave crew. But the enemy was not able to take possession of her, and circumstances soon permitted her flag again to be hoisted." The chief fault to be found with captain Perry's letter is, that it does not contain the slightest allusion to the bravery of captain Barclay, or the inferiority of his means of resistance.

As the Americans are by this time pretty well ashamed of all the bombastic nonsense circulated by the press of the United States, day after day during many months of the war, on the subject of captain Perry's "nelsonic" victory, we shall not rake the trash up again; but we fear that the professional, and therefore presumably correct, dictum of a contemporary, that, "in number and weight of guns, the two squadrons were nearly equal,"* will make the Americans imagine, that they

* Brenton, vol. v. p. 132.

1813. really had some ground for their extravagant
 Sept. boasting. However, on referring again to our contemporary's account, we feel satisfied that little harm will arise; for, should the evident partiality that is shown to sir George Prevost miss being seen, the statement, that "both the Detroit and Queen-Charlotte struck to the United States' ship St.-Lawrence, commodore Parry," will satisfy the american reader, that captain Brenton knew very little about the action he was attempting to describe.

Court-
 martial
 on capt.
 Bar-
 clay.

On the 16th of September, 1814, captain Barclay, and his surviving officers and men, were tried by a court-martial on board the Gladiator at Portsmouth, for the loss of the late Erie flotilla, and the following was the sentence pronounced: "That the capture of his majesty's late squadron was caused by the very defective means captain Barclay possessed to equip them on Lake Erie; the want of a sufficient number of able seamen, whom he had repeatedly and earnestly requested of sir James Yeo to be sent to him; the very great superiority of the enemy to the british squadron; and the unfortunate early fall of the superior officers in the action. That it appeared, that the greatest exertions had been made by captain Barclay, in equipping and getting into order the vessels under his command; that he was fully justified, under the existing circumstances, in bringing the enemy to action; that the judgment and gallantry of captain Barclay in taking his squadron into action, and during the contest, were highly conspicuous, and entitled him to the highest praise; and that the whole of the other officers and men of his majesty's late squadron conducted themselves in the most gallant manner; and did adjudge the said captain Robert Heriot Barclay, his surviving officers and men, to be most fully and honourably acquitted." Rear-admiral Edward James Foote, president.

Notwithstanding this flattering testimonial, notwithstanding the severity of his wounds, wounds

by one of which his right arm had been entirely lost, many years before the Lake Erie defeat, and by two others, received in that action, his remaining arm had been rendered permanently motionless, or nearly so, and a part of his thigh cut away, captain Barclay was not confirmed as a commander until the 19th of November, 1813; and he is not, even yet, any higher in rank.

Neg-
lected
treat-
ment
of
capt.
Bar-
clay.

The first naval event of the late war upon Lake Champlain, a lake, all, except about one-twentieth part, within the boundaries of the United States, occurred on the 3d of June, 1813. Two american armed sloops appeared in sight of the british garrison at Isle-aux-noix. Three gun-boats immediately got under way to attack them; and the crews of two batteaux and of two row-boats were landed, to annoy the enemy in the rear, the channel being very narrow. After a contest of three hours and a half, the two sloops surrendered. They proved to be the Growler and Eagle, mounting 11 guns, and having a complement of 50 men, each; both under the command of lieutenant Sidney Smith, of the United States' navy. The British had three men wounded; the Americans, one man killed, eight severely wounded, and, including the latter, 99 prisoners. No british naval officer was present. The feat was performed by detachments of the 100th regiment, and royal artillery, under the direction of major Taylor, of the former.

Boat-
attack
on Lake
Cham-
plain.

On the 1st of August, some officers and seamen having arrived from Quebec, captain Thomas Everard, late of the 18-gun brig-sloop Wasp, with the two prize-sloops, three gun-boats, and several batteaux, containing about 1000 troops under the command of colonel Murray, entered the american port of Plattsburg. Here the colonel landed with his men; and, after driving away the american militia at the post, destroyed all the arsenals, block-houses, barracks, and stores of every description, together with the extensive barracks at Saranac. The two

rard
attacks
Platts-
burg,
&c.

1813. } enterprising officers then proceeded off Burlington
Aug. } and Swanton, in Vermont; where they seized and
destroyed several sloops laden with provisions, and
did other considerable injury. At this time the
United States' troops at Burlington, distant only 24
miles from Plattsburg, under the command of major-
general Hampton, amounted to about 4000 men.
Although a letter written by an inhabitant of Bur-
lington, and published in most of the american
papers, declares that the british troops "did no
injury whatever to private property," an american
historian states thus: "They (the British) wantonly
burned several private store-houses, and carried off
immense quantities of the stock of individuals."*

Ameri-
can
naval
force
on
Lake
Cham-
plain.

As a proof that a little energy on the part of
the Americans might have averted the Plattsburg
misfortune, it appears by a statement, published in
the United States within three weeks after the above
affair happened, that the american naval force on
Lake Champlain then consisted of the President,
of 12 guns, the Commodore-Preble and Montgomery,
of 11 guns each, the Frances, of 6 guns, two gun-
boats, of one 18-pounder each, and six scows, of one
12-pounder each.

* Sketches of the War, p. 156.

BRITISH AND FRENCH FLEETS.

THE remarks which we ventured to submit, when ^{1814.} commencing with the important operations of the preceding year, have left us little to do in ushering the present year into notice, beyond pointing to the usual Annual Abstract,* and to the prize and casualty lists attached to it.†

The number of commissioned officers and masters, ^{Officers, &c.} belonging to the british navy at the commencement of the year 1814, was,

Admirals	65
Vice-admirals	68
Rear-admirals	76
" superannuated	29
Post-captains	798
" " "	37
Commanders or sloop captains . .	628
" superannuated	50
Lieutenants	3285
Masters	674

And the number of seamen and marines, voted for the service of the year, was 140000 for seven, and 90000 for six, lunar months of it.‡

Although we can afford to say very little on the subject, it may be necessary to state that, during the preceding year, in consequence of treaties among ^{Powers allied against France.} them, Russia, Prussia, Austria, Denmark, and Sweden, allied themselves with England, Spain, and Portugal, against France. A counter-revolution took place in Holland, and the prince of Orange landed there from England, and was proclaimed sovereign

‡ See Appendix, No. 9.

1814. prince of the United Netherlands. Before the pre-
 Feb. sent year was many days old, Murat deserted his old benefactor, and made peace with England. All these events, many of which are highly interesting to the historical reader, will be found amply detailed in other works exclusively devoted to the subject: our business is with occurrences that take place upon a different element, and to them we return.

French On the 12th of February a french squadron, of
 squad- three sail of the line and three frigates, under the
 ron command of rear-admiral the baron Cosmao-
 sails Kerjulien, sailed from Toulon to meet a newly-built
 from french 74 expected from Genoa. Matters in France
 Toulon were getting so near to a crisis, that the *Moniteur* could find no room in its pages for an account which, otherwise, would have been allowed a conspicuous place: hence, we can give the names of only one line-of-battle ship and one frigate, the *Romulus* and *Adrienne*. On the 13th, at a few minutes after daybreak, this squadron, then steering to the southward, was discovered by sir Edward Pellew's fleet. At 7 h. 55 m. A. M. the six french ships tacked together, and, with a strong east wind, steered for Porquerolles on their return to Toulon. At 10 h. 30 m. A. M. the ships entered the bay of Hyères by the *Grande-Passe*, and, in about an hour afterwards, quitted it by the *Petite-Passe*, still under all sail.

British The british fleet, consisting of the following 15 sail
 fleet steers to cut off french ships. of the line, besides the *Unité* frigate and *Badger* brig-sloop, was also under all sail, advancing to cut off the french squadron from the road of Toulon, towards which it was now steering:

At 30 minutes past noon the leading ship of the British fleet, the Boyne, opened a fire upon the second French ship from the rear, (believed to have been the Adrienne frigate,) which was immediately returned by the squadron, then running before the wind, at the rate of 10 knots, for Cape Carquaranne. The Boyne carried a press of sail, in the hope of cutting off or driving on shore the sternmost French ship, the Romulus; but the latter kept so close to the shore, as to render the attempt impracticable, without the Boyne herself going on shore. The Boyne, therefore, had no alternative but to lay close alongside the French 74; who, as well as her five companions, was now steering straight for Cape Brun. A steady and well-directed fire, within half pistol-shot distance, was maintained by the Boyne; but to which the Romulus scarcely returned a shot, until she got abreast of Pointe Sainte-Marguerite. Being by this time nearly unrigged by the Boyne's fire, the Romulus now hauled dead-in, to run on shore between the batteries of Brun and Sainte-Marguerite. At this instant, Sir Edward Pellew, in the Caledonia, who was close astern of the Boyne, waved to Captain Burlton to haul out. No sooner had the Boyne made a movement in obedience to this order, than the Romulus, putting her helm a-starboard, shot round Cape Brun, and, notwithstanding a broadside from the Caledonia, and her evidently disabled state from the Boyne's previous fire, succeeded in entering the road of Toulon; where the

Feb.

French
batte-
ries
fire at
Boyne.

The french batteries, particularly those of Cape Brun and Cape Sepet, opened a very heavy and destructive fire upon the Boyne as she stood out to the southward. The Boyne at length got clear; and the Caledonia, running up alongside of her, greeted the Victory's sister-ship, who had just acted so nobly in emulation of her, with three hearty cheers; a salute which the men of the Boyne were not slow in returning. The fire from the french batteries and ships, particularly the former, had shot away the Boyne's mizentopsail yard, and main and spring stays, greatly damaged her running rigging and sails, badly wounded her foremast, fore yard, and bowsprit, disabled two of her guns, and struck her hull in several places under water. Her loss on the same occasion amounted to one midshipman (George Terry) and one seaman killed, one midshipman, (Samuel Saunders,) 32 seamen, six marines, and one boy wounded; total, two killed and 40 wounded. The Caledonia received no damage; and her loss was confined to one seaman killed by an explosion.

Cale-
donia.

Same
on
board
Romu-
lus and
Adri-
enne.

The Romulus is acknowledged to have sustained a loss, in killed and badly wounded, of 70, and the Adrienne of 11. The Romulus, undoubtedly, was manœuvred in a very skilful manner; and her captain, whose name we regret not being able to give, deserved credit, as well for that, as for his bravery in not striking his colours to so powerful an opponent as the Boyne. According to the french papers, the 74 from Genoa succeeded in entering Toulon on the following day, the 14th; making 23 sail of the line, including six three-deckers, afloat in the road and harbour, besides two or three two-deckers on the stocks.

Sur-
render
of Cat-
taro,
Ragu-
sa, &c.

On the 5th of January, after a 10 days' cannonade, the fortress of Cattaro in the Adriatic, surrendered to the british 38-gun frigate Bacchante, captain William Hoste, and the 18-gun brig-sloop Saracen,

captain John Harper. The loss on the occasion was comparatively trifling, amounting to only one seaman killed, and lieutenant of marines William Haig, slightly wounded. Captain Hoste, in his letter to rear-admiral Fremantle on the subject, speaks in high terms of the following officers: captain Harper, lieutenants John Hancock and Charles Robert Milbourne, acting lieutenant William Lee Rees, Mr. Stephen Vale, the *Bacchante's* master, lieutenant Haig, and midshipman Charles Bruce. On the 28th Ragusa surrendered to the *Bacchante* and *Saracen*, and to a body of british and austrian troops who were besieging the fortress; and on the 13th of February, the island of Paxo surrendered, without resistance, to the british 38-gun frigate *Apollo*, captain Bridges Watkinson Taylor, and a detachment of troops under lieutenant-colonel Church.

In the course of January and February, indeed, by the active and gallant exertions of the different ships composing the squadron of rear-admiral Fremantle in the Adriatic, aided by detachments of austrian troops, every place belonging to the French in Dalmatia, Croatia, Istria, and the Frioul, with all the islands in that sea, surrendered to the allies; as, in the month of March and April, did Spezzia and Genoa to a small squadron under the command of sir Josias Rowley, aided by a detachment of british troops and a division of sicilian gun-boats. At Genoa the British gained possession of the french 74-gun ship *Brilliant* ready for launching, another 74 in frame, and four brig-corvettes, of which the *Renard* that had engaged the *Swallow* was one. The *Brilliant* was a ship of 1883 tons, and, being built of good oak, became an acquisition to the british navy; in which she still continues under the name of Genoa.

In order to cooperate with the british army under the marquess of Wellington, which, on the 20th of February, had reached the banks of the Adour, a small squadron had been stationed off the mouth of

1814.
Jan.

Other islands in the Adriatic.

Also of Spezzia and Genoa.

British squadron off the Adour.

1814. the river, under the command of rear-admiral Charles
 Feb. Vinicombe Penrose; who, to get nearer to the scene
 of operations, had embarked on board the 24-gun
 ship Porcupine, captain John Coode. On the
 morning of the 23d, which was as early as the ships
 and the boats collected for the service could arrive
 off the river, the latter were detached to endeavour
 to find a passage through the tremendous surf that
 beats over the bar. At this time the british troops
 were seen from the ships, crossing over to the north
 side of the river, but greatly in want of the boats
 intended for their assistance. Thus stimulated,
 captain Dowell O'Reilly, of the 10-gun brig-sloop
 Lyra, in a spanish-built boat selected as the most
 safe for the purpose, and having with him the
 principal pilot, was the first to make the attempt to
 cross the bar, but the boat upset. Captain O'Reilly,
 however, and we believe the whole boat's crew
 were so fortunate as to gain the shore. Lieutenant
 John Debenham, in a six-oared cutter, succeeded in
 reaching the beach; but, as it was scarcely possible
 that one boat in 50 could then have crossed, the
 other boats returned, to await the result of the next
 tide. The tide being at length at a proper height,
 and all the vessels well up for the attempt, several
 boats drew near the bar, but hauled off again, until
 at last lieutenant George Cheyne, of the 10-gun
 brig-sloop Woodlark, in a spanish boat, with five
 british seamen, crossed the surf and ran up the river.
 The next was a prize-boat, manned from a transport,
 closely followed by a gun-boat, commanded by
 lieutenant John Chesshire, who was the first that
 hoisted the british colours in the Adour. The
 remainder of the boats and vessels followed in rapid
 succession, "the zeal and science of the officers
 triumphing over all the difficulties of the navigation;"
 but this arduous and most perilous undertaking was
 not accomplished without a heavy loss of life.
 Captain Elliot of the brig-sloop Martial, Mr. Henry
 Bloye, master's mate of the Lyra, and 11 seamen of

Passage

Serious
 loss on
 the oc-
 casion.

the Porcupine, Martial, and Lyra, drowned; three transport boats lost, number of men unknown; also a spanish chasse-marée, the whole crew of which perished in an instant.

1814.
April.

The british army afterwards crossed the Adour and invested Bayonne; and, early in March, a detachment under marshal Beresford moved forward towards Bordeaux. On the 21st rear-admiral Penrose, with the 74-gun ship Egmont, to which he had now shifted his flag, anchored in the Gironde. On the 2d of April captain Coode of the Porcupine, who had ascended the Gironde above Pouillac, detached his boats under the orders of lieutenant Robert Graham Dunlop, in pursuit of a french flotilla which was observed proceeding down from Blaye to Tallemont. On the approach of the boats, the flotilla ran on shore; and about 200 troops from Blaye lined the beach to protect the vessels; but lieutenant Dunlop, landing with a detachment of seamen and marines, drove the French with great loss into the woods, and remained until the tide allowed the greater part of the vessels to be brought off. One gun-brig, six gun-boats, one armed schooner, three chasse-marées, and an imperial barge, were captured; and one gun-brig, two gun-boats, and one chasse-marée burned. This service was performed with the loss of two seamen missing, and 14 seamen and marines wounded.

British ships in the Gironde.

Boats of Porcupine take a french convoy

On the evening of the 6th the 74-gun ship Centaur, captain John Chambers White, anchored in the Gironde, in company with the Egmont; and preparations were immediately made for attacking the french 74-gun ship Régulus, three brig-corvettes, and other vessels lying near her, as well as the batteries that protected them; but at midnight the French set fire to the Régulus and her companions, and the whole were destroyed. Before the 9th the batteries of Pointe Coubre, Pointe Nègre, Royan, Sonlac, and Mèche were successively entered and destroyed by a detachment of seamen and marines

De-struction of french 74 Régulus.

1814. under captain George Harris of the 38-gun frigate Belle-Poule.

Preliminaries of peace, &c.

The entry of the allies into Paris on the 31st of March, and the preliminary treaty entered into between England and France on the 24th of April, put a temporary stop to the miseries of war in Europe. Louis XVIII. landed at Calais from Dover the same day; and on the 28th of April Napoléon embarked at Fréjus in Provence on board the british 38-gun frigate Undaunted, captain Thomas Ussher, who, on the 4th of May, landed his passenger in safety at Porto-Ferraro in the isle of Elba.

Division of Scheldt fleet.

In the succeeding August the Scheldt fleet was divided in the following manner: 12 sail of the line were allowed to be retained by France; three were restored to Holland, as having formerly belonged to her; and seven others were also given to her, to be held in trust, until the congress at Vienna should decide how they were to be disposed of. The ships, generally, were a good deal broken in the sheer, and, having been constructed of green wood, were in bad condition. The nine sail of the line, including two three-deckers on the stocks, were to be broken up.

LIGHT SQUADRONS AND SINGLE SHIPS.

Iphigénie and Alc-mène sail from Cherbourg.

On the 20th of October, 1813, the two french 40-gun frigates Iphigénie and Alc-mène, captains Jacques-Léon Emeric and Alexandre Ducrest de Villeneuve, sailed from Cherbourg on a six months' cruise. The two frigates proceeded first off the Western Isles, and then to the coast of Africa; where they captured two guineamen, laden with elephants' teeth, &c. After taking out the most valuable parts of the cargoes, captain Emeric burnt the ships. From Africa the Iphigénie and Alc-mène sailed to the Canary Isles, in the vicinity of which they took six other prizes. On the 16th of January, at 7 A. M., when cruising off these islands, the two french frigates fell in with the british 74-gun ship

Are chased by Venerable and Cyane.

Venerable, captain James Andrew Worth, bearing the flag of rear-admiral Philip Charles Durham, on his way to take the chief command at the Leeward-Islands, 22-gun ship Cyane, captain Thomas Forrest, and prize-brig Jason, a french letter-of-marque captured 17 days before, and now, with two guns (having thrown 12 overboard in chase) and 22 men, in charge of lieutenant Thomas Moffat, belonging to the Venerable.

1814.
Jan.

The two frigates, when first descried, were in the north-east; and the Cyane, the wind then blowing from the east-south-east, was ordered to reconnoitre them. Having shortened sail and hauled to the wind on the starboard tack, the Cyane, at 9 A. M., ascertained that they were enemies, and made a signal to that effect to the Venerable, who immediately went in chase. The chase continued throughout the day, so much to the advantage of the 74, that, at 6 h. 15 m. P. M., the Venerable arrived within hail of the Alcmène, the leewardmost frigate. After having hailed twice in vain, the Venerable opened her guns as they would bear; when the french frigate immediately put her helm up, and, under all sail, laid the british 74 on board, captain Villeneuve, as was understood, expecting that his commodore, in compliance with a previous agreement, would second him in the bold attempt. According to another statement, and which has more the air of probability, the object of the Alcmène in bearing up was to cross the 74's bows, and, by disabling her bowsprit and foremast, to deprive her of the means of pursuit. Whether captain Emeric had agreed to cooperate or not, the Iphigénie now hauled sharp up, and left the Alcmène to her fate. A very short struggle decided the business, and before 6 h. 25 m. the french colours were hauled down by the british boarders, headed by captain Worth. The conflict, although short, had been severe, especially to the Alcmène; who, out of a crew of 319 men and boys, lost two petty officers

Alc-
mène

1814. and 30 seamen killed, and 50 officers and men
 Jan. wounded, including her gallant commander. The
 Venerable's loss consisted of two seamen killed and
 four wounded.

Cyane
 and a
 prize-
 brig
 chase
 Iphi-
 génie.

During the time that had thus elapsed, and the
 additional time required to shift the prisoners and
 repair the trifling injury done to the 74's rigging by
 the frigate's attempt to board, the Cyane and Jason
 had gone in chase of the *Alemène's* fugitive consort.
 At 10 p. m. the little Jason, having outrun the Cyane
 in the chase, commenced firing at the *Iphigénie* with
 her two guns, both of which lieutenant Moffat had
 now got on the brig's larboard side. Such was the
 slow sailing of the *Iphigénie*, or the unskillfulness
 of those that manœuvred her, that at 45 minutes
 past midnight the Cyane got near enough to open
 a fire from her bow guns, and received in return
 a fire from the frigate's stern-chasers, which cut her
 rigging and sails a good deal. At 4 h. 30 m. A. M. on
 the 17th the Cyane gallantly fired three broadsides
 at the french frigate, but soon found the latter too
 heavy for her and dropped astern. At 5 h. 45 m.
 A. M. captain Forrest despatched the brig in search
 of the admiral, and continued his pursuit of the
Iphigénie; who shortly afterwards hauled close to
 the wind on the larboard tack, and fired three broad-
 sides at the Cyane, nearly all the shot of which,
 fortunately for the latter, either went over her masts
 or between them. At 9 A. M. the *Iphigénie* bore
 up and steered south-west, still followed by the
 Cyane.

Vene-
 rable
 joins in
 the
 chase
 and
 cap-
 tures
 Iphi-
 génie.

The chase thus continued, the latter losing sight
 occasionally and again recovering it, during the
 remainder of the 17th, and the whole of the 18th
 and 19th. In the evening of the latter day the Cyane
 dropped astern; but the Venerable was now fast
 coming up, and, at daylight on the 20th, was within
 two miles of the french frigate. The Venerable,
 from whose mast-head the Cyane was now not to be
 seen, presently opened a fire from her bow guns,

and received in return a fire from the stern and 1814.
 quarter guns of the Iphigénie. Having thrown ^{Jan.} overboard her boats and cut away her anchors without effect, the french frigate, at 8 A.M., discharged her starboard broadside and struck her colours.

Neither the Venerable nor the Iphigénie appears Gal-
 to have suffered any loss from the other's fire ; and lantry
 the Cyane, whose gallantry and perseverance in the of capt.
 chase were so creditable to captain Forrest, seems Forrest
 also to have escaped without loss. The same good and
 fortune attended the Jason ; who with her two guns, lieut.
 (6-pounders probably,) gave so good an earnest of Moffat,
 what lieutenant Moffat would have done, had he
 commanded a vessel that mounted 20. The Iphigénie
 and Alcène, being nearly new frigates, were both
 added to the british navy ; the first under the name
 of Gloire, the latter under that of Dunira, afterwards
 changed to Immortalité.

In the latter end of October, 1813, the two french Etoile
 40-gun frigates Etoile and Sultane, captains Pierre- and
 Henri Phillibert and Georges Du-Petit-Thouars, Sultane
 sailed from Nantes on a cruise. On the 18th of sail
 from
 Brest.
 January, at 4 A. M., latitude about 24° north, longi-
 tude (from Greenwich) 53° west, these two french
 frigates discovered in the north-west the british
 24-pounder 40-gun frigate Severn, captain Joseph
 Nourse, escorting a convoy from England to the island
 of Bermuda, and steering west by north, with the wind
 a light air from the south-east. At 7 h. 30 m. A. M. Chase
 the Severn proceeded in chase ; and at 8 h. 40 m., Severn.
 finding the strangers did not answer the private
 signal, the british frigate bore up north by east,
 and made all possible sail from them, signalling her
 convoy to take care of themselves.

At 10 h. 30 m. A. M. the Severn commenced firing Severn
 her stern-chasers at the leading enemy's frigate, opens
 and at noon lost sight of her convoy steering to the har
 westward. At 4 h. 5 m. P. M. the headmost french fire.
 frigate, the Etoile, hoisting her colours and broad

1814. pendant, began firing her bow guns. A running
 Jan. fight now ensued, which, without doing the slightest
 injury to the Severn, lasted until 5 h. 30 m. P. M.;
 when the Etoile, then distant less than two miles,
 (the Sultane astern of her about one,) ceased firing.
 French frigates give over chase. The chase continued all night, rather to the advantage of the Severn. At 8 A. M. on the 19th the two french frigates gave up the pursuit, and hauled to the wind on the starboard tack.

Anchor at the island of Mayo and discover Creole and Astrea. The Etoile and Sultane afterwards proceeded to the Cape de Verds, and anchored in the port of English-Harbour, island of Mayo. On the 23d of January, at about 9 h. 55 m. A. M., the two british 18-pounder 36-gun frigates Creole, captain George Charles Mackenzie, and Astrea, captain John Eveleigh, rounding the south-east end of Mayo on their way from the neighbouring island of Fort-aventura, with the wind at north-east, blowing fresh, discovered over a point of land the mast-heads of the two french frigates, and of two merchant ships, one brigantine, and one schooner, lying in their company. At 10 h. 15 m. the two british frigates, having cleared the point, wore and hauled to the wind on the larboard tack, under their topsails. On a supposition that the strangers, whose hulls were now plainly visible, were portuguese or spanish frigates, the Creole hoisted the portuguese, and the Astrea, by signal from her, the spanish, private signals. No answer being returned, the strange frigates were considered to be enemies; and at 11 h. 30 m. A. M. the Creole and Astrea wore and made sail for the anchorage in which they lay.

Get under way and are chased by the two british frigates. At noon, when the two british frigates were about a mile distant from them, the Etoile and Sultane, having previously hoisted their topsail yards to the mast-head, cut or slipped, and made sail free on the larboard tack, with a strong wind still from the north-east. The two former now set topgallantsails in chase; and the Astrea, owing to a gust of wind

suddenly striking her, had the misfortune to split ^{1814.} all three topsails, the mizen topsail very badly, to replace which a fresh sail was soon got into the top. ^{Jan.} At about 30 minutes past noon the south-west end of the island of Mayo bore from the Creole, the leading british frigate, east-north-east distant four miles. In another quarter of an hour the Creole, both british frigates having previously hoisted their colours, fired a shot ahead of the sternmost french ship, the Sultane, then on the former's lee or star-board bow. The two french frigates immediately hoisted their colours. The Creole continued firing her bow guns occasionally at the Sultane until 1 P. M.; when the former discharged a few of her larboard guns, and then, as she ranged up on the Sultane's lee beam, received the french ship's first broadside.

The Astrea also opened her fire in crossing the stern of the Sultane, and then gallantly passed ^{Astrea joins in the} between the latter and the Creole, just as the two ^{can-} ships had exchanged the fourth broadside. After ^{nonade} giving and receiving two broadsides within pistol- ^{and} shot, the Astrea, at 2 h. 15 m. P. M., stood on to ^{attacks} engage the Etoile, then about half a mile ahead of ^{Etoile.} her consort, with her mizen topsail aback. Having extinguished a fire that had caught in the foretop-mast staysail and mizen chains, the Creole, at 2 h. 30 m., recommenced the action with the Sultane, and presently shot away her mizenmast. About this time the wadding from the french ship's guns again set the Creole on fire, in the forecastle hammocks and on the booms. The flames were again extinguished, and the action continued for nearly half an hour longer; making about two hours from its commencement. Having now had every brace and bowline, tack, and sheet shot away, her main stay and several of her shrouds cut through, her three masts, particularly her foremast, badly wounded, the Creole put her helm a-lee, and, steering to the

 Jan. abandoned the contest.

Astrea
 in close
 action
 with
 Etoile.

It took the Astrea, when, at 2 h. 15 m., she had quitted the Sultane, until 2 h. 30 m. before she got alongside of the Etoile to-leeward. After an exchange of broadsides, the Astrea, having from the great way upon her ranged too far ahead, luffed up and raked the Etoile on her starboard bow. The Astrea, just at this moment losing her wheel, fell round off; and the Etoile, wearing, passed close astern of her, separating her from the boat she was towing, and poured in a most destructive raking fire; which cut the Astrea's lower rigging to pieces, shot away both deck-transoms and four quarterdeck beams, burst a carronade, and ripped up the quarterdeck in all directions. Backing round, the Astrea soon got her starboard guns to bear; and the two frigates, each with a fresh side opposed to the other, recommenced the action, yard-arm and yard-arm. In a few minutes captain Eveleigh fell, mortally wounded by a pistol-shot just below the heart, and was carried below.

Death
 of capt.
 Eve-
 leigh.

Sultane
 ap-
 proach-
 es to
 aid her
 consort
 but
 stands
 away
 again.

The command now devolved upon lieutenant John Bulford; and the engagement between the Astrea and Etoile continued in this close position, with mutual animation, although it was no cheering sight to the Astrea, at about 3 p. m., to observe her consort on the starboard tack, apparently a beaten ship, and the Etoile's consort approaching to double the force against herself. At 3 h. 5 m. p. m. the topsail, which lay in the Astrea's mizen top to replace the split one, caught fire, but the flames were soon extinguished. Seeing the near approach of the Sultane, the Astrea would have boarded the Etoile, and endeavoured to decide the contest that way; but the motion of the ships was too great, and the british frigate could only continue to keep her antagonist under her guns to-leeward. At 3 h. 30 m. the Sultane, as she passed to-leeward, raked the Astrea, and did her considerable damage. In five

minutes the Sultane wore from the Astrea, and stood before the wind, leaving the latter and the Etoile still in close action. 1814.
Jan.

At 3 h. 45 m. the Etoile also wore round on the starboard tack ; and in five minutes afterwards the Astrea's mizenmast, with the topsail a second time in flames, went by the board, carrying some of the firemen with it. In a short time after she had wore and ceased firing, the Etoile stood towards her consort, who was waiting for her under easy sail ; and the Astrea, having by this time had the whole of her lower and topsail braces shot away, and being otherwise greatly damaged in rigging and sails, was in too unmanageable a state to follow. At 4 h. 15 m. the Sultane's main topmast went over the side ;* and the Astrea, having soon afterwards partially refitted herself, wore round on the starboard tack with her head towards San-Jago. At this time the Creole was not visible to the Astrea ; and the two french frigates were about four miles distant in the south-west, steering south by west. At 4 h. 30 m. P. M. the Creole was discovered under the land, standing into Porto-Praya bay ; where at 4 h. 45 m. she anchored, and where, in about an hour afterwards, the Astrea joined her.

The principal damages of the Creole have already been related : her loss, out of a complement of 284 men and boys, amounted to one master's mate, seven seamen, and two marines killed, and 26 petty officers, seamen, and marines wounded. The Astrea, besides the loss of her mizenmast and the damage done to her rigging and sails, had her fore and main masts wounded, and was a good deal struck about the stern and quarter. Her loss, out of the same complement as the Creole's, consisted of her commander and eight seamen and marines killed, and 37 petty officers, seamen, and marines wounded, four of them dangerously and 11 severely ; making

* The logs of the Creole and Astrea concur in stating it to have been the mainmast that fell, but both ships were mistaken.

parties.

1814. the loss on board the two british frigates 19 killed
 March. and 63 wounded. The two remaining masts of the
 Sultane, and all three masts of the Etoile, were
 badly wounded; and, that their hulls escaped no
 better is most likely, because the acknowledged loss
 on board of each, out of a complement of 340 men
 and boys, was about 20 men killed and 30 wounded,
 or 40 killed and 60 wounded between them.

Re- Here were two pairs of combatants, about as
 marks equally matched, considering the character of the
 on this opponent parties, as could well be desired; and who
 action. fought so equally, as to make that a drawn battle,
 which, under other circumstances, might have ended
 decisively. Had the Creole, having already witnessed
 the fall of the Sultane's mizenmast, been aware of
 the tottering state of that frigate's main topmast,
 captain Mackenzie would not, we presume, have
 discontinued the engagement, simply for the preser-
 vation of his wounded foremast; especially, when
 the Creole's main and mizen masts were still standing,
 as well as all three of her topmasts, and when, by
 his early retirement, he was exposing to almost
 certain capture a crippled consort. No frigate could
 have performed her part more gallantly than
 the Astrea; but two such opponents, as the one
 that had so long been engaging her, were more than
 she could withstand. Fortunately for the Astrea,
 both french frigates had seemingly had enough of
 fighting; and the Etoile and Sultane left their sole
 antagonist, in a state not less of surprise than of joy
 at her extraordinary escape.

Sultane On the 26th of March, at 9 A. M., these two frigates,
 and (the Sultane with jury topmasts and mizenmast,) when
 Etoile about 12 leagues to the north-west of the Isle de Bas,
 fall in steering for Saint-Malo, in thick weather, with a
 with moderate breeze at south-west, fell in with the
 Hebrus 36-gun frigate Hebrus, captain
 and Edmund Palmer, and 16-gun brig-sloop Sparrow,
 Hanni- captain Francis Erskine Loch. The latter was so
 bal. near to the french frigates that, in crossing them,

she received seven or eight shot from each; which 1814.
greatly damaged her rigging and sails, killed her March.
master, and wounded one seaman. The brig now
tacked towards the Hebrus, who was on her weather
quarter, standing on the larboard tack. The latter,
as she passed the french frigates to-windward on
the opposite tack, exchanged distant broadsides
with them, and fired her weather or larboard guns
as a signal to her consort, the 74-gun ship Hannibal,
captain sir Michael Seymour. At 9 h. 30 m. A. M.
the Hebrus again tacked, and in 10 minutes after-
wards, on the fog clearing, observed the Hannibal
coming down under a press of canvass. At 10 A. M.,
being joined by the 74, the Hebrus crowded sail
after the two french frigates, then bearing from her
south-east by east distant about four miles. At 11
A. M. the wind suddenly shifted to north-north-west,
and blew very fresh. On this the two french
frigates, finding their pursuers rapidly approaching,
separated: the Sultane changed her course to east
by north, and the Etoile hauled up to south-east.
Directing by signal the Hebrus, as the best sailing
ship, to chase, in company with the Sparrow, the
most perfect frigate, the Hannibal herself went in
pursuit of the other.

Hebrus
chases
Etoile,
and
Hanni-
bal,
Sultane

At 2 P. M. the Hebrus lost sight of the Hannibal
and Sultane, and at 5 P. M., of the Sparrow; and the
Etoile then bore from her south-east by east,
distant three miles. Soon afterwards the Etoile
gradually hauled up to east-north-east, but was
still gained upon by the Hebrus. About mid-
night the french frigate reached the Race of
Alderney; when, the wind getting more northerly,
the Hebrus came up fast, and took in her studding-
sails. At 1 h. 35 m. A. M. on the 27th, having run
the length of Pointe Jobourg, the Etoile was obliged
to attempt rounding it almost within the wash of the
breakers. At 1 h. 45 m., while, with her courses
hauled up, the Hebrus was following close upon the
larboard quarter of the Etoile as the latter wore round

Hebrus
brings
Etoile
to
action.

1814. the point, the french frigate opened a fire upon the
 March. british frigate's starboard bow. This fire the Hebrus quickly returned within pistol-shot distance, running athwart the stern of the Etoile, to get between her and the shore; and that so closely, that her jib-boom passed over the french ship's taffrail. The Hebrus was now in eight fathoms' water, and the land within musket-shot on her starboard beam. At 2 h. 20 m. A. M., while crossing the bows of the Hebrus to get again inside of her, the Etoile shot away the british frigate's fore topmast and fore yard, and crippled her mainmast and bowsprit, besides doing considerable injury to her rigging, both standing and running.

It had been nearly calm since the commencement of the action, but at 3 A. M. a light breeze sprang up from the land. Taking advantage of this, the Hebrus succeeded in pouring several raking fires into her antagonist, and at 3 h. 45 m. shot away her mizenmast by the board. At 4 A. M. the Etoile ceased firing; and, after a close and obstinate combat of two hours and a quarter, hailed to say that she had struck. No sooner was possession taken of the prize, than it became necessary to turn the heads of both ships off the shore, as well to prevent them from grounding, as to get beyond the reach of a battery, which, having been unable in the darkness of the morning to distinguish one frigate from the other, had been annoying them both with its fire. The tide fortunately set the ships round Pointe Jobourg, and at 7 A. M. they anchored in Vauville bay, about five miles from the shore.

Although the principal damages of the Hebrus were in her masts and rigging, her hull had not wholly escaped, as is evident from her loss; which, out of a crew of about 284 men and boys, amounted to one midshipman (P. A. Crawley) and 12 seamen killed, and 20 seamen, two marines, and three boys wounded; four of the number dangerously, and six severely. The Etoile's principal damages lay in her hull, which was extremely shattered, leaving her at

 ship.

the close of the action with four feet water in the hold : her loss, in consequence, out of 327 men and boys, (including the wounded in her former action,) amounted to 40 killed and 73 wounded. ^{1814. March}

The guns of the Hebrus, one of the new yellow-pine frigates, were the same as those of the Belvidera.* The Etoile mounted 44 guns, including 14 carronades, 24-pounders, and two 8-pounders on the quarterdeck and forecastle. Of her acknowledged crew of 327, we shall allow 12 for the badly wounded, and not yet recovered, of the action of the 26th of January. ^{Guns of the two frigates}

As the crew of the Hebrus was quite a new ship's company, with scarcely a single draught from any other ship, while the crew of the Etoile had been formed out of the united ships' companies of the Aréthuse and Rubis, and had even since fought a creditable, if not a victorious, action with an equal force, a great share of credit is due to captain Palmer, his officers, and crew, for the successful result of this action ; considering, especially, how near it was fought to the french shore, and how critically circumstanced the Hebrus was, both during its continuance and at its termination. We formerly concluded, that the stock of ammunition on board the Etoile must have been considerably diminished when she fell in with the Hebrus ; but it has since been proved to us, that, after her capture by the latter, the Etoile had a considerable quantity of powder and shot left : consequently we erred in our supposition, and are extremely gratified, that the inaccuracy has been ^{Re-marks on the action.}

* See p. 120.

1814. pointed out in time to be corrected in these
 March. pages. We must not omit to mention, that captain William Sargent, of the navy, who was a passenger on board the Hebrus during the action, evinced much skill and intrepidity; as is very handsomely acknowledged by captain Palmer in his official letter.

Hanni- The Hannibal was not long in overtaking the dis-
 bal cap- abled frigate of which she went in chase. At 3 h.
 tures 30 m. p. m. on the 26th the Sultane hoisted her
 Sultane colours and fired a gun. At 4 h. 15 m., having received two chase shot from the Hannibal, as an earnest of what would presently follow, the french frigate, keeping away a little, discharged her star-board broadside and surrendered.

The leaks of the Etoile, from the well-directed shot of the Hebrus, were so serious, that the ship could not be kept free on a wind, so as to reach Portsmouth: lieutenant Robert Milborne Jackson, the prize-master, was therefore obliged to bear away for Plymouth; where, on the 29th, the prize anchored in safety. The Sultane was carried to Portsmouth; and both the latter and her late consort, being new frigates, were added to the british navy, the Sultane in her own name, and the Etoile under the name of Topaze. The first lieutenant of the Hebrus, Mr. Jackson, who, besides his good conduct in the action, had, as we have seen, some difficulty in getting his charge into port, was promoted to the rank of commander.

Promo- tion of
 lieut. Jack- son, On the 5th of January, at 10 a. m., the island of Saint-Antonio, one of the Cape de Verds, bearing south-east by south distant eight or nine leagues, the british 38-gun frigate Niger, captain Peter Rainier, and 18-pounder 36-gun frigate Tagus, captain Philip Pipon, with a convoy in company, steering to the westward, discovered nearly ahead the french 40-gun frigate Cérés, captain Hyacinth-Yves-Potentien le baron de Bougainville; which, in company with the Clorinde, of the same force,

Niger
 and
 Tagus
 chase
 Cérés.

captain René-Jean-Marie Denis-Lagarde, the senior officer, had sailed from Brest in the early part of December. Both british frigates proceeded in chase with a light breeze from the east-south-east, the Niger leading. Towards evening the Cérés gained in the pursuit; but, on the Niger's throwing over-board 800 shot, the latter got near enough, at 11 p. m., to fire three shot from her bow-chasers.

1814.
Jan.

On the 6th, at 1 h. 30 m. a. m., the Niger fired two more shot, which the Cérés returned from her stern guns. As the day opened, the wind drew to the north-east; which so favoured the Tagus that, at 7 h. 30 m. a. m., she passed the Niger, and was gaining fast upon the french frigate. At 8 h. 15 m., desirous to try a different point of sailing, the Cérés shortened sail and hauled to the wind on the star-board tack. As a proof that the french frigate gained little by this, in half an hour the Tagus got within gun-shot, and, hoisting her colours, opened a fire, which the Cérés, hoisting hers, presently returned. A running fight now commenced between the Tagus and Cérés, and continued until 9 h. 30 m. a. m.; when, having had her main topmast shot away, the french frigate fired a broadside and surrendered. At this time, owing to some damage done to the rigging of the Tagus by her opponent's stern-chasers, the Niger had headed her consort, and was in the act of opening a heavy fire upon the Cérés.

A running
fight com-
mences
and Cérés
surren-
ders.

Besides the loss of her main topmast, the rigging and sails of the Cérés were a good deal cut, and some of her lower masts injured. The damages of the Tagus were confined to her rigging and sails; and neither the French nor the English sustained a greater loss than one man wounded. Being a fine new frigate of 1074 tons, the Cérés was added to the british navy, under the name of Seine, a Ceres being already in the service.

Da-
mage,
&c. on
each
side.

It is uncertain on what day, previous to the capture of the Cérés, her consort, the Clorinde, parted

1814. company; but we find the latter on the 25th of
 Feb. February, in latitude $47^{\circ} 40'$ north, longitude (from
 Greenwich) $9^{\circ} 30'$ west, on her way to Brest, after
 a tolerably successful cruise. It was at 2 P. M.,
 when standing close hauled on the starboard tack,
 with the wind at south-west by south, that the
 Clorinde was descried by the british 24-pounder
 38-gun frigate Eurotas, captain John Phillimore,
 then on the former's weather beam steering by the
 wind on the larboard tack. The Eurotas quickly
 bore up in chase; and at 2 h. 30 m. P. M. the Clorinde,
 whose national character and force was by this time
 ascertained, also bore up, under a press of sail.

Arma- While the chase is going on, we will proceed to
 ment point out some peculiarities in the armament of one
 put on of these ships, a knowledge of which will be
 board necessary, to render fully intelligible the details
 Euro- we have to give of the action fought between them.
 tas and At the commencement of the year 1813, under the
 Cydnus head of "British and american navies," we stated
 that, among the means taken to meet the large
 american frigates on equal terms, some of the british
 38-gun class were mounted with medium 24-pounders
 and an increased complement of men. The first two
 frigates so fitted were the Cydnus and Eurotas,
 both built of red pine and recently launched. The
 Cydnus was fitted with the 24-pounder of general
 Blomefield, measuring 7 ft. 6 in., and weighing
 about 40 cwt.; and the Eurotas, after having, by
 mistake we believe, received on board a set of long
 or 49 cwt. 24s, was fitted with the 24-pounder of
 colonel Congreve, measuring also 7 ft. 6 in., and
 intended to weigh 41 cwt. 1 qr. 12 lb., but actually
 weighing only 40 cwt. 2 qrs. 21 lb. With 28 of
 these guns on the main deck, 16 carronades, 32-
 pounders, two long nines, and the usual 18-pounder
 launch-carronade, on the quarterdeck and fore-
 castle, as her regular establishment, and with, we
 are inclined to think, one additional 24-pounder upon
 general Blomefield's principle, the Eurotas, com-

manded by captain John Phillimore, (promoted from the Diadem troop-ship, which he had commanded since June, 1810,) sailed from the Nore in the middle of the month of August, bound off Brest. 1814.
Feb.

On the 30th the Eurotas joined the blockading squadron, which was under the command of commodore Pulteney Malcolm, in the 100-gun ship Queen-Charlotte, captain Robert Jackson. On some day in September (we believe the 14th) captain Phillimore invited the commodore and all the captains of the squadron on board the Eurotas to witness a trial of her 24-pounders. The guns were tried eight times, with the full allowance of powder, and double-shotted; and they stood remarkably well. Commodore Malcolm said, he should like to have colonel Congreve's 24-pounders on the Queen-Charlotte's second and third decks; and every one of the captains went away pleased with the gun. The following captains, with the exception of one or two, but which we cannot say, were present at this successful trial of the guns of the Eurotas: captains Willoughby Thomas Lake, Robert Lambert, Thomas Elphinstone, sir Michael Seymour, Henry Vansittart, George M'Kinley, George Tobin, George Harris, and Robert Jackson. Captain Phillimore subsequently declared that, if well manned, he could fight both sides of the Eurotas with ease; was delighted with the guns in a gale of wind; and found that, when the Eurotas was carrying a press of sail off Ushant, the guns did not work in the least, nor the ship seem to feel the smallest inconvenience from them.* On the 25th of November the Eurotas sent six of her 24-pounders on board the Cydnus, and received in exchange the same number of the latter's guns; but on the 5th of the ensuing February, when the two ships again met, the Eurotas received back her six 24s and returned to the Cydnus those belonging to her. Euro-

 mences
 the
 action.

At 4 P. M. the wind shifted to the north-west and fell considerably; but the Eurotas, nevertheless, gained in the chase. At about the same time the Clorinde, then not quite four miles distant in the east-north-east, suddenly shortened sail, and endeavoured to cross the hawse of her pursuer. This only hastened the junction; and at 4 h. 45 m. the Eurotas fired a shot and hoisted her colours, as did also the Clorinde. At 5 P. M., having bore up, the Eurotas passed under the stern of the Clorinde and discharged her starboard broadside. Then, luffing up under the Clorinde's quarter, the british frigate received so close and well-directed a fire, that in the course of 20 minutes, and just as she had reached the larboard bow of her antagonist, her mizenmast fell by the board over the starboard quarter; and, nearly at the same time, came down the fore topmast of the Clorinde.

Euro-
 tas
 loses
 all
 three
 masts
 and
 Clor-
 inde
 escapes
 with

 mast
 only
 stand-
 ing.

The french frigate now, shooting ahead, endeavoured to cross the bows of the Eurotas, with the intention of raking her. To evade this, and at the same time lay her antagonist on board, the Eurotas put her helm hard a-port and luffed up; but, being obstructed in her manœuvre by the wreck of the mizenmast, she could only pass close under the stern of the Clorinde, and pour in her larboard broadside. The two frigates again got side by side, and cannonaded each other with redoubled fury. At 6 h. 20 m. P. M. the Eurotas, then close on her opponent's starboard beam, had her mainmast shot away; and which, fortunately for her, fell over the starboard or unengaged quarter. Almost at the same instant the mizenmast of the Clorinde came down. At 6 h. 50 m., the two ships being nearly in the same relative position, the foremast of the Eurotas fell over the starboard bow; and in a minute or two afterwards the mainmast of the Clorinde shared the same fate. The Eurotas was now quite, and the Clorinde almost, unmanageable. At 7 h. 10 m. P. M.

being then on the larboard bow of the Eurotas, 1814.
the Clorinde set the remains of her foresail and Feb.
her fore staysail, and stood to the south-east, out of
gun-shot.

Captain Phillimore, who since the early part of Wound
the action had been dangerously wounded in the of capt.
shoulder by a grape-shot, (the loss of blood from Philli-
more,
which, according to a published statement,* had
caused him to faint three times on deck,) now con-
sented to go below; and the command of the Eurotas
devolved upon lieutenant Robert Smith. The boats'
masts were immediately stepped on the booms, and
the sails set, to endeavour, with a light westerly
breeze, to keep after the enemy, still in the south-
east. The wreck of the masts was also cleared
away, and preparations made for getting up jury
masts: in the mean while the ship laboured much,
owing to her dismasted state and a heavy swell from
the westward.

By great exertions throughout the night, the Euro-
tas re-
fits
herself
and
pro-
ceeds in
chase.
Eurotas, at 5 A. M. on the 26th, got up a spare
main topmast for a jury mainmast, and at 6 h. 15 m.
a fore topmast for a jury foremast, and a rough spar
for a mizenmast; the Clorinde still preserving the
same line of bearing as on the preceding evening,
but having increased her distance to nearly six
miles. At 11 h. 30 m. A. M. lieutenant Smith spoke the
english merchant schooner Dungarvon, from Lisbon
bound to Port-Glasgow, and requested her master to
keep between the Eurotas and the Clorinde, and, in the
event of the Eurotas not overtaking the Clorinde before
night, to show a light and fire guns. At noon the
Eurotas and Clorinde were about eight miles apart;
but in so different a state with respect to ability to
renew the action, that, while the latter had only
partially cleared away the wreck of her main and
mizen masts, the former had jury-courses, topsails,
staysails, and spanker set, going, with a northerly

* Naval Chronicle, vol. xxxi. p. 184.

1814. wind, six and a half knots through the water, and evidently gaining in the chase.

Dryad and Achates come up and Clorinde surrenders. But at this moment, as captain Phillimore justly observes, "to the great mortification of every one on board" the Eurotas, two sail were descried on the lee bow. The nearest of these was the british 18-pounder 36-gun frigate Dryad, captain Edward Galwey; the other the 16-gun brig-sloop Achates, captain Isaac Hawkins Morrison. At 1 h. 15 m. P. M. the Clorinde hoisted french colours aft and english forward, and despatched a boat to the Dryad, who then shortened sail and hove to to receive it. The purport of captain Denis-Lagarde's communication, as it has appeared in print, was to require terms before he would surrender. The doubt expressed by the french officer, as to the ship in sight to-windward being that which had reduced the Clorinde to such a state, was far from unreasonable; considering that, not only had a night intervened, but the ship now seen was masted, rigged, and under sail, while the ship engaged the evening before had been left as bare as a hulk. The french lieutenant was quickly sent back to the Clorinde to get ready her "resources," and the Dryad filled and stood towards her, to give her an opportunity of trying the effect of them. At 1 h. 35 m. P. M., having placed herself on the Clorinde's quarter, the Dryad fired one shot into her; when the french frigate hauled down her colours, and was taken immediate possession of. At this time the Eurotas was between four and five miles off to-windward, and the Achates about the same distance from the Clorinde to-leeward.

Loss on each side. Out of a complement on board of 329 men and boys, the Eurotas had two midshipmen, (Jeremiah Spurking and Charles Greenway,) one first-class volunteer, (John T. Vaughan,) 13 seamen, four marines, and one boy killed, her commander, (very severely,) one lieutenant of marines, (Henry Foord,) one midshipman, (John R. Brigstock,) 30 seamen, and six marines wounded; total, 21 killed and 39

wounded. Out of a crew on board numbering, according to the depositions of captain Denis-Lagarde and his two principal officers, 344 men and boys, the Clorinde had 30 officers and men killed and 40 wounded. From the great proportion of killed, it is probable that the severely wounded only are here reckoned. They may have amounted to 20 more; making the killed 30, and the wounded 60.

1814.
Feb.

In the letter which captain Galwey, with a proper feeling, permitted captain Phillimore to write, the latter states, that the Clorinde had "a complement of 360 picked men," and that "M. Gerrard," one of the french officers, calculated their loss at 120 men. With respect to the complement, judging by the number of men usually found on board frigates of the Clorinde's class, and allowing, if necessary, that some may have been absent in prizes, we consider the sworn amount, 344, and that for which the head-money was afterwards paid, as likely to be the most correct. In regard to the alleged declaration of "M. Gerrard," unless the slightly wounded were in a very unusual proportion, the statement extracted from the Dryad's log is more to be depended upon; especially, as it specifies both killed and wounded, and accords exactly, as we shall proceed to show, with the number and distribution of the prisoners. Owing to there being three british men of war in company, it is natural to suppose, that all the prisoners would be taken out of the french ship, with the exception of the badly wounded. Accordingly, out of the 314 assumed survivors of the french crew, the Dryad received on board 125, the Eurotas 92, and the Achates 57; leaving on board the Clorinde, by a singular coincidence, the exact number stated by the french officers as the amount of their wounded. Every one of those officers, not left in the Clorinde, appears to have been on board the Dryad; among whom we find, captain Denis-Lagarde, M. Joseph Lemaître, his first, and M. Vincent Moulac, his second, lieutenant; but we do not see in the list the name of

Captain
Phillimore's
account
of the
Clorinde's
complement
and loss.

1814. "Gerrard," nor any name resembling it. This person, therefore, was probably one of the wounded left on board the Clorinde.

Feb.

Although we are by no means satisfied, that the Eurotas did not mount one of general Blomefield's 24-pounders in addition to her established armament already particularized, we shall not include that gun, nor, of course, the 18-pounder launch-carronade, in the following

COMPARATIVE FORCE OF THE COMBATANTS.

Re-
marks
on the
action.

Had the Eurotas been armed the same as the generality of her class, this would have been a tolerably fair match; but the british ship's 24-pounders destroyed the equilibrium. Yet, with a distance which would even have suited carronades, and with the exclusive advantage of two raking fires, those 24-pounders did not do so much execution, in proportion to the time they were acting, as had been done on many other occasions by an equal number of 18s. The ship, it is true, had not been quite 10 months in commission, and had not had her guns on board many days over six months; but even the shorter of those two periods was long enough for the men to have been taught as much of practical gunnery, as should have enabled them, in a close action of nearly two hours with an inferior antagonist, to have done greater execution, in reference to what they themselves suffered, than appears to have been inflicted by the Eurotas upon the Clorinde.

Crew
of Eu-
rotas
better
seamen
than
gun-
ners.

But, deficient as the crew of the Eurotas may have been at their guns, they were by no means so at the various other duties of their calling. The quickness, with which the seamen refitted their ship, was as great a proof of their spirit as it was of their skill; and, contrasted with the evidently unprepared state of the Clorinde, 18 hours after the battle, showed,

in a very clear manner, the superiority of a british 1814.
over a french crew. It was the capability to go ^{Feb.}
ahead and manœuvre, thus given, that would again,
in a short time, have brought the Eurotas
alongside of the Clorinde; and it was a perfect
readiness to renew the action, with, owing to the
preceding day's two hours' practice at the guns, an
actual increase of power, that would have made the
Clorinde the prize of the Eurotas, even had the
Dryad not interposed her unwelcome presence.

The junction of the Dryad and Achates, although ^{On the}
it certainly robbed the Eurotas of her trophy, went a ^{con-}
very little way towards dignifying the surrender of ^{duct}
the Clorinde; who, notwithstanding her captain's ^{of capt.}
previous threat, did not fire a shot in return for the ^{Denis-}
one discharged at her by the Dryad. We formerly ^{La-}
expressed a belief, that the Achates alone would ^{garde.}
have produced the same result; but, much as was
to be expected from the tried gallantry of the brig's
commander, we now, looking at the number of
unwounded prisoners received out of the Clorinde,
and the impunity with which her principal officers
escaped, think otherwise. Nor do we feel disposed
to award so much credit to M. Denis-Lagarde, as we
formerly did; not only because of the tameness of his
surrender, but because, with so many officers and men
in an effective state, he ought, in the 18 hours that
had elapsed, to have cleared away his wreck and
partially refitted his ship. The dismasted state of
the Eurotas, and her serious loss in men, prove that
the french crew knew in what way to handle their
guns; and, considering how long the Clorinde had
been in commission, and how many months of the
time at sea,* we must suppose that her men were
competent to perform the other duties of men-of-
war's men, had their officers issued the proper direc-
tions. With good management, therefore, the
Clorinde might have effected her escape before the
Dryad and Achates fell in with her; and, even had

* See vol. v. p. 273, and this volume, p. 21.

1814. the prevailing westerly wind begun to blow strong,
 Feb. soon after the close of the action, and lasted through
 the night, the probability is, that the french frigate,
 unfitted as she was, would still have gained a port
 of France.

Dryad
 con-
 ducts
 Clo-
 rinde to
 Ports-
 mouth.

Taking the prize in tow, the Dryad proceeded with her to Portsmouth; and the Clorinde was afterwards added to the british navy by the name of Aurora, a Clorinde (also a french frigate) being already in the service. For his gallantry in the action, and his unremitting exertions in getting the ship cleared, masted, and under sail in so short a space of time, lieutenant Robert Smith, first of the Eurotas, was deservedly promoted to the rank of commander. A litigation afterwards took place on the subject of the head-money for the crew of the Clorinde; and it was at length decreed to the Dryad, as having been the actual captor.

Nature
 of ob-
 jec-
 tions
 to
 former
 ac-
 counts
 of this
 action.

With the exception of the particulars entered into respecting the guns of the Eurotas, and respecting the state of the prisoners received out of the Clorinde, the above account of the action between these frigates is essentially, and almost verbally, the same as that given in the preceding edition of this work. The accuracy of that account having been publicly impugned, we are bound, either to admit that we were misinformed on the subject, or to bring forward such proofs, as will place beyond the reach of further contradiction the validity of our statements. As far as we have been able to glean them, the following are the principal, if not the only, objections that were raised: 1. That the Eurotas's 24-pounders were experimental guns, and proved defective in some (but what, we cannot say) particular, when tried in the action. 2. That the crew of the Eurotas *had been* taught how to fire with precision; consequently, that the comparatively slight execution done by the Eurotas to the Clorinde did not arise from the inexpertness of her men, but from the ineffectiveness of her guns. Unfortunately, the

newspapers of the day used their endeavours to circulate a much more important objection than either of these; no less than that the maindeck guns of the Eurotas were 18, and not 24 pounders. Let us hasten to do captain Phillimore the justice to state, that he never made, although we do not remember that he contradicted, an assertion which could have been so easily refuted. A contemporary saw the paragraph, and, putting aside the newspaper, kept it until he could give the statement again to the public, with a post-captain's name as a voucher for its accuracy, in the following words: "A frigate-action, of an interesting nature, was fought in February, 1814, between the Eurotas, a british ship, of 44 guns, 18-pounders, and la Clorinde, of the same force."*

1814.
Inaccuracy
of capt.
Bren-
ton.

Taking the two serious objections in the order in which they are stated, we shall begin with the quality of the guns. As far as a trial before the action could speak for the Congreve 24-pounders, we have already shown, that captain Phillimore himself, commodore Malcolm, and several experienced post-captains, were "delighted with them." Now for their behaviour in the action. The moment we learnt that captain Phillimore had a complaint to allege against the guns, for some ill quality or deficiency that discovered itself in the action between the Eurotas and Clorinde, we turned again to the official letter. Finding no complaint there, we once more looked into the ship's log; knowing that, there at least, a minute of the circumstance ought to have been noted down. Not a word could we discover on the subject. We then took the pains to ascertain, if any official report, complaining of the guns, had reached the navy board. Except an application, made in March, to have the breeching-bolts of the carronades, and the cat-heads, of the Eurotas made different from those of any other ship in the

1814. service, and a refusal of both requests, we could find
 March. no correspondence between captain Phillimore and
 the commissioners of the navy.

Testi-
 mony
 of
 lieut.
 Graves
 as to
 the be-
 haviour
 of the
 guns
 in the
 action.

Pursuing our inquiries, we at last discovered that, on the 15th of March, 1814, an examination took place of the officers of the *Eurotas* on the very subject on which we desired information; and the following (all we have been able to procure) is a transcript of what purports to be the testimony of the second lieutenant of the *Eurotas*, Richard Wilcox Graves: "That, when the said guns were tried at Sheerness against the common 24-pounder long gun, they seemed to carry the shot, both double and single, as far as the latter; that they bounded a little more than the long gun, but not dangerously so; that they can be worked with two men less than the common long gun, are easier to train, and embrace a larger range or circle; that, in the action, one bolt only was drawn on the main deck, and one seizing broken, the latter of which might have been badly made; that, upon the main deck, two shot were fired from each gun in the first three rounds, and one round and one grape during the remainder of the action; that the quantity of gunpowder was 8lb., which was considered 2lb. too much, no difference of range being perceived when the guns were fired with only 6lb.; that there is only one gun on board the *Eurotas*, similar to those on board the *Cydnus*, upon lieutenant-general Blomefield's principle, on account of there not being a complete set at Woolwich when the *Eurotas* was fitted out."

Board
 of ad-
 miralty
 ap-
 prove
 of Eu-
 rotas's
 guns
 and
 order
 more to
 be cast,
 &c.

From the time of her action, except to land them when docked to have her damages repaired, the *Eurotas* retained these same guns, until captain James Lillicrap paid the ship off on the 6th of January, 1816; when the *Eurotas* landed her "28 Congreve's 24-pounders" at the arsenal at Woolwich. Consequently, there could have been no well-grounded complaint against the guns, otherwise the board of admiralty would not have suffered the

Eurotas again to go to sea with them on board. On ^{1814.} the contrary, the lords of the admiralty were so pleased with the report made of the 40 cwt. Congreve 24-pounder, after a series of experiments tried at Sutton Heath, that, in the latter end of the year 1813, they ordered 300 more of the same description of gun to be cast; and, as a proof that the behaviour of the guns in the action of the Eurotas with the Clorinde rather confirmed than lessened the previous good opinion entertained of them, the board of admiralty, on the 28th of April, 1815, ordered that all the first-rate ships in the british navy should thenceforward be established, upon their upper or third decks, with the Congreve 24-pounder.

After this full exposition of the perfect adequacy of the Eurotas's 24-pounders to perform, in a close contest especially, quite as well as any guns of the same caliber, we might answer the second objection, by simply pointing to the execution done by english 24 and 32, against french 18 and 24 pounders, and *vice versa*, as unfolded in our detailed account of this action; but we shall not blink the question: we stated, that the ship's company of the Eurotas had not been sufficiently practised at the guns, and we are prepared to prove our assertion. We must premise that, at the time the Eurotas was commissioned and armed with 24-pounders, three american 24-pounder frigates had recently captured three english 18-pounder frigates, and that with such impunity as to indicate, that the art of gunnery had been much neglected in the british navy. The degree of attention paid by a captain to the exercise of his men, which would be commendable in 1811, would scarcely deserve any praise at all in 1813. And even in the latter part of 1813, a captain of a 38-gun frigate, armed in the usual manner of her class, might allege, as some excuse for not troubling himself more than he had been accustomed to do about the expertness of his crew at the guns, that the board of admiralty had issued an order, that no

tas.

1814. } british 18-pounder frigate was voluntarily to engage one of the 24-pounder frigates of America. But here was a frigate, fitted out purposely to be a match for one of those frigates; and we have not a doubt that, before he fell in with the *Clorinde*, captain Phillimore expressed a strong desire to encounter the *Constitution*. Under these circumstances, no pains should have been spared to make the crew of the *Eurotas* expert cannoneers. We have seen the means that captain Broke took to teach his men how to point their guns with effect, and we have seen in what a short space of time those guns, thus skilfully directed, tore to pieces an equal antagonist.

Euro-
tas
proved
not to
have
exerc-
ised
her
men
suffi-
ciently.

Knowing that it is customary to minute down in the log when the men are exercised at great guns and small arms, we naturally turn for information to the log of the *Eurotas*, and find that, from the 13th of August to the 25th of February, the crew were so exercised, including thrice in firing at a mark, 24 times; which is at the rate of about once in eight days, or, admitting we may have overlooked an entry or two, once a week. Whether this arose from the neglect or the incompetency of the captain, or from the prevalence of bad weather, or the frequency of chases, the effect was the same upon the crew: they did not learn their business; and, when the day of trial came, they failed in accomplishing as much as was expected of them. But, that the men wanted neither zeal nor capacity, has already appeared in the quickness with which they refitted their ship, to go again in pursuit of their enemy. Some persons have urged as an excuse for the crew of the *Eurotas*, that a heavy sea was raging, which prevented them from pointing their guns with precision; forgetting, that the crew of the *Clorinde* laboured under precisely the same inconvenience. We need not refer to many pages back, to show what was performed, about a month afterwards, by a british frigate with 18-pounders, and two guns less of a side than the *Eurotas*, against a french frigate equal

in force to the Clorinde; and the Hebrus was not put in commission until five months after the Eurotas, and was not by any means so well manned, the principal part of the latter's crew having been draughted from the Quebec, Arethusa, and Cornelia frigates. 1814.

We trust, that we have now completely established the accuracy of our former statement, that the guns of the Eurotas, in her action with the Clorinde, did not perform so well as they ought; and that the fault lay, not in the guns themselves, but in the manner in which they were handled. In conclusion, we beg to observe, that, if the slight superiority in execution, which the Eurotas's 24-pounders proved themselves to possess over the 18-pounders of the Clorinde, were not clearly shown to have arisen from adventitious circumstances, with what face could we, as we so strenuously have done, deny to the Americans the greater part of the credit which they take to themselves, for having, with their 24-pounder frigates, so completely beaten the 18-pounder frigates of England? Why was the armament of the Eurotas changed from 18 to 24 pounders, if not to give the ship an increase of force? But, with submission, we think, if it was really intended that the newly fitted frigates of the year 1813 were to be a match for the Constitution and her classmates, the board of admiralty should have gone a step beyond increasing the caliber of the guns and the number of the crew: they should have selected, to command each of those champion frigates, a captain who had done something to entitle him to such a preference; not a captain whose name was new in the glorious annals of the british navy. Men of courage are to be found in all ranks of life, but courage is not the only quality required in a naval captain; especially in one, selected from several hundreds, to aid, by his gallantry and skill, in restoring the confidence of the nation, shaken, as it in some degree had been, by a few unexpected defeats in its

Admiralty ought to have selected proper captains for the 24-pdr. frigates.

1814. favourite service. Even admitting that the captain, thus highly honoured, had not possessed the good fortune to have distinguished himself, (and many a most deserving officer has passed a long professional life in vain endeavours to do so,) he ought at least to have been an officer who had made the art of gunnery his chief study, and who had rendered himself conspicuous in the service, if not by the battles he had won and the dangers he had braved, by the discipline and good order of his ship.

Prim-
rose
chases
a brig
which
she
sup-
poses
to be
a mer-
chant-
man.

On the 12th of March, at 2 P. M., latitude $43^{\circ} 16'$ north, longitude $10^{\circ} 56'$ west, the british 18-gun brig-sloop Primrose, captain Charles George Rodney Phillott, while lying to on the larboard tack with the wind from the north-east by east, discovered, and at 2 h. 30 m. made sail after, a vessel on the lee bow, standing to the south-west. This vessel was the british brig-packet Duke-of-Marlborough, captain John Bull, from Falmouth with a mail, bound to Lisbon. At 4 h. 20 m. P. M., observing that the strange brig had altered her course to avoid her, the Primrose fired a gun and hoisted her colours, a small blue ensign, at the gaff-end, and continued in chase. Shortly afterwards, when the Marlborough was about seven miles distant, the blue ensign was hauled down, and, that the stranger might see it more distinctly, a large red one hoisted in its stead. At 6 h. 50 m. P. M. the Primrose fired a shot at the strange brig, which, from her yawing about, was supposed to be a captured english merchantman; any thing, in short, but a king's packet, as she had no lower studding-sails or royals set.

Marl-
boro'
packet
takes
Prim-
rose
for an
ameri-
can pri-
vateer.

On first observing herself chased by the Primrose, whom she took for an american privateer, the Marlborough had hoisted the private signal, but the end-on position of the two vessels, their distance apart, and the circumstance of the flags being only half the established size, prevented the Primrose from making them out. After being up about two hours, by which time the Primrose had approached to within five miles,

the private signal was hauled down, and the ensign and pendant only kept flying. As soon as it became dark the private night-signal was made, or rather was attempted to be made, for it appears that no one on board the packet, except the gunner, knew the difference between a blue light and a false fire. At 7h. 55m. P. M., the Marlborough opened a fire from one of her two brass 9-pounders out of the stern ports, which was so well directed, that it cut some of the rigging about the bowsprit and foremast of the Primrose, and passed through her main course. The fire was repeated from both stern guns, and continued to be destructive to the rigging and head-sails of the Primrose; who, from the breeze freshening, was now fast approaching.

At 8h. 15m. P. M., ranging up on the Marlborough's larboard quarter, at the distance of about 100 yards, the Primrose shortened sail; and captain Phillott hailed once, and his second lieutenant, who had a loud voice, twice. The only answer returned, was the discharge of three guns, and immediately afterwards of the packet's whole broadside; whereby the master, Mr. Leech, and two men were mortally, and three slightly, wounded on board the Primrose. The latter now began firing as her guns could be brought to bear; but, owing to the manœuvres of the Marlborough, the Primrose found a difficulty in firing with any effect. The Primrose then steered for the packet's quarter to run her on board, but was prevented from doing so by a boom or spare-yard that had been rigged out from her stern. The sloop's head-braces being at the same time shot away, her head-sails came aback, and she was unable for the present to close. Quickly refitting herself, the Primrose again made sail, and, closing, reopened her fire. That of the Marlborough soon slackened; and, on captain Phillott again hailing, the painful truth came out; that his antagonist was a british packet.

The damages received by the Marlborough, as admitted by captain Bull and his officers, were of a very serious nature. Two 32-pound shot had

1814. passed through just below the water's edge ; and the
 March. packet, in consequence, had three and a half feet
 water in the hold, and, by its rapid increase, was
 reduced to nearly a sinking state. Her masts also
 were much injured, and her standing and running
 rigging nearly all shot away. Her loss, on this
 unfortunate occasion, amounted to adjutant Andrews
 of the 60th regiment, and another passenger, killed,
 and the master and nine or ten men wounded. Except
 a shot through her mainmast, the principal damage
 sustained by the Primrose has already been related :
 her loss amounted to one seaman killed, her master,
 (Andrew Leech, dangerously,) one master's mate,
 (Peter Belcher, severely,) and 12 seamen and marines
 wounded. At the request of captain Bull, the car-
 penter of the Primrose and one of his mates were
 sent on board the Marlborough, to assist in stopping
 her leaks.

Reason
 of the
 differ-
 ence
 be-
 tween
 this
 and
 former
 ac-
 count. The facts above detailed differ materially from
 those we inserted in the first edition of this work ;
 but we shall be exonerated from blame when we
 mention, that our first statement was grounded upon
 an apparently authentic account, already before the
 english public ; and which account, owing probably to
 the absence of the Primrose on a foreign station, was
 not contradicted. The minutes of a court of inquiry,
 held upon captain Phillott, on the subject of this
 unfortunate rencontre, have since been put into our
 hands ; and it is thus that we have been enabled to
 give the only correct account of the transaction
 which has appeared in print.

 can pri-
 vateer
 Wasp. On the 2d of February, at 8 P. M., latitude at
 noon that day 36° 41' north, longitude 22° 11' west,
 the british 56-gun ship Majestic,* captain John
 Hayes, steering east-half-north with the wind a
 moderate breeze from the south-south-east, on
 the look-out for the american frigate Constitution,
 which had sailed from Boston bay on the 1st of
 January, discovered on her weather bow a ship,

* See p. 206. But the Majestic mounted only one 12-pounder
 chase-gun.

evidently a cruiser, standing towards her. In about 20 minutes the stranger, which, as afterwards ascertained, was the american privateer Wasp, of Philadelphia, mounting 20 guns, found her mistake; and, wearing, stood to the north-east under all the canvass she could set. The Majestic made sail in chase, and continued the pursuit until daylight on the 3d; when, having got within four miles of the Wasp, she descried, about three leagues off in the south-south-east, three ships and one brig, of a very suspicious appearance, the ships especially. At 7 A. M. the Majestic made the private signal, and, receiving no answer, shortened sail to reconnoitre the strangers. These were, not, as conjectured, an american squadron, but the two french 40-gun frigates Atalante and Terpsichore, from Lorient on the 8th of January, and their prizes, a large richly-laden spanish ship, captured the day previous, named the San-Juan-de-Baptista, carrying 20 guns and 50 men, and an unarmed merchant brig. At 7 h. 30 m. the four vessels stood towards the Majestic. Having again made the private signal without effect, captain Hayes, at 8 h. 30 m. A. M., gave up the chase of the Wasp, and hauled to the wind on the larboard tack, with a light breeze from the north-north-east, more distinctly to make out the character of the strangers in the south.

1814.
Feb.

prizes.

At 9 A. M. the Majestic tacked to the westward. At 9 h. 15 m., just as she had got upon the beam of the weathermost ship, which was the Terpsichore, the latter made to her consort the signal for an enemy. Captain Hayes being determined to force these ships, now clearly seen to be large frigates, to show their colours, the Majestic, at 10 A. M., tacked, hoisted her colours, and bore up for the Terpsichore. In five minutes the latter shortened sail, for the Atalante, who was some distance astern, to close; and, on the Majestic's evincing an increased eagerness to get alongside of her, the Terpsichore wore and stood towards her tardy companion, with the signal flying, "The enemy is inferior to us." The french

Chases

mo-
dore
deserts
his
consort As soon as the Terpsichore had joined the Atalante, which was at about 11 h. 30 m. A. M., the two frigates, formed in line ahead, with the Lima ship and merchant brig on the weather bow, seemed resolved to withstand an attack. But the Majestic, by her bold approach, extinguished the last remnant of resolution in the poor commodore; and, at 11 h. 45 m., the Atalante crowded sail nearly before the wind to the south-south-east. In a minute or two the Terpsichore, hoisting french colours, followed her consort. Both french ships carried their larboard studding-sails; and the Atalante, ludicrously enough, still kept the signal flying, "Make more sail." The armed ship and merchant brig, meanwhile, had hauled up to the eastward, also under a press of canvass.

Majes-
tic
over-
takes
and
cap-
tures
Terpsi-
chore. Towards noon the wind freshened, and the Majestic gained upon the Terpsichore. At 2 h. 15 m. P. M. the latter opened a fire from her stern chase-guns. At 3 P. M., being in a good position, going at the rate of 10 knots an hour, the Majestic commenced firing her bow guns with considerable effect, almost every shot striking. After a running fight, which lasted until 4 h. 49 m. P. M., the Terpsichore fired a few of her aftermost guns at the Majestic, who was then within musket-shot distance, and struck her colours, but did not shorten sail. The Majestic, in consequence, fired another shot or two; when, at 4 h. 56 m., the french frigate let all fly and brought to. The wind increasing and the prize being in a state of confusion, captain Hayes felt himself obliged to stay by her, and to suffer the other frigate, with the ship and brig, to escape. The sea, indeed, got up so very fast, that, out of 317 prisoners, 100 only could be removed; and, in effecting that, the jollyboat was stove and two of the prisoners drowned. The previous loss on

board the Terpsichore, out of a crew of 320 men and boys, amounted to three men killed and six wounded. The Majestic did not lose a man. 1814.
Feb.

We much regret our inability to give the name of the senior officer of these two french frigates, the captain of the Atalante. We should like to hold up to contempt the officer who could tamely suffer his consort to be caunonaded by an enemy's ship for one hour and three quarters, when, in a very few minutes, he might have placed himself within a few yards of the attacking force. Not a single shot did he bestow, even in defence of a prize that, besides her valuable cargo, had on board 600000 dollars in specie. Captain François-Désiré Breton deserved a braver commodore; for no one surely will say, that two french 40-gun frigates (without reckoning the 20-gun ship) ought not to have attacked the Majestic? Admitting that the nature of her metal would have justified a retreat, monsieur whoever he was should at least have waited till he had ascertained whether that metal was light or heavy. The
behaviour
of the
french
com-
mo-
dore.

The conduct of the Majestic, in unhesitatingly bearing down to the attack, even when the want of colours and the haze of the weather rendered it doubtful whether two of the four strangers were not american frigates, places the gallantry of captain Hayes in a conspicuous light. Even had they been the Constitution and Essex, as Captain Hayes, before the Terpsichore showed her colours, (one frigate, from her style of painting, appearing much larger than the other,) conjectured they were, so excellent a crew had the Majestic, and so well skilled were they in fighting the powerful guns which this fine ship mounted, that the result would scarcely have been doubtful: at all events, the captain and his officers, would have considered such a meeting as the most fortunate epocha of their professional lives. Con-
trasted
with
that of
captain
Hayes.

On the 14th of February, off Lorient, the prize to these french frigates, the San-Juan, was recaptured by the british 38-gun frigate Menelaus, captain sir Arrival
of Ata-
lante at
Lorient

1814. Peter Parker, the Rippon 74, captain sir Christopher Cole, in sight. On the same, or the preceding day, the *Atalante* succeeded in entering the port, towards which the Lima ship was steering when fallen in with, Lorient.

Com-
mo-
dore
Rod-
gers
chased
by two
french
frigates

On the 5th of December, 1813, the american frigate *President*, commodore Rodgers, sailed from Providence, Rhode-Island, upon her third cruise; but not unseen, for the british frigate *Orpheus*, captain Hugh Pigot, obtained a distant view of her, and hastened with the information to her consort, the 74-gun ship *Albion*, captain John Ferris Devonshire. On the 25th, in latitude 19° north, longitude 35° west, the *President* fell in with, chased, and on making them out to be frigates, and concluding them to be british, ran from, the two french 40-gun frigates *Nymphe* and *Méduse*, from Brest upon a cruise since the latter end of November. Had these ships really been british, the *President* would have had a narrow escape, the headmost frigate having thrown several shot over her. By altering her course in the night, the american frigate at last got clear, and, steering to the south-west, cruised to-windward of Barbadoes until the 16th of January. The commodore then ran off Cayenne; thence off Surinam, Berbice, and Demerara, and between the islands of Tobago and Grenada; thence across the Carribean sea, along the south-east side of Porto-Rico, through the Mona-Passage, and down the north side of Jamaica.

His
arrival
at New-
York.

Striking soundings off St.-Augustine, the *President*, on the 11th of February, passed Charles-town; and, on arriving off the Delaware, fell in with, in a fog, "a large vessel, apparently a man of war." This ship "disappearing," the *President* stood on to the northward. "From the Delaware," says the commodore, in his letter to the secretary of the american navy, "I saw nothing, until I made Sandy-Hook, when I again fell in with another of the enemy's squadrons; and, by some unaccount-

able cause, was permitted to enter the bay, although ^{1814.} in the presence of a decidedly superior force, after ^{Feb.} having been obliged to remain outside, seven hours and a half, waiting for the tide."

The "decidedly superior force" is thus explained ^{A curious account of his rencontre with a british "74."} in a letter from one of the President's officers: "After passing the light, saw several sail, one large sail to-windward; backed our main topsail, and cleared ship for action. The strange sail came down within gun-shot, and hauled her wind on the starboard tack. We continued with our main topsail to the mast three hours, and, seeing no probability of the 74-gun ship's bearing down to engage the President, gave her a shot to-windward, and hoisted our colours; when she bore up for us, reluctantly. When within half gun-shot, backed her main topsail. At this moment, all hands were called to muster aft, and the commodore said a few, but impressive words, though it was unnecessary; for, what other stimulant could true Americans want, than fighting gloriously in the sight of their native shore, where hundreds were assembled to witness the engagement. Wore ship to engage; but, at this moment, the cutter being discovered coming back, backed again to take in the pilot, the british 74 (strange as it must appear) making sail to the southward and eastward. Orders were given to haul aboard the fore and main tacks, to run in; there being then in sight from our deck a frigate and gun-brig. The commander of the 74 had it in his power, for five hours, to bring us at any moment to an engagement, our main topsail to the mast during that time."*

"It was," adds the american writer who was so ^{Plantagenet named as the ship.} fortunate as to be favoured with a copy of this genuine american epistle, "afterwards ascertained, that the ship, which declined the battle with the President, was the Plantagenet 74, captain Lloyd. The reason given by captain Lloyd for avoiding an

* Naval Monument, &c. p. 235.

1814. engagement was, that his crew were in a state of mutiny." Another american historian says: "Captain Lloyd, after returning to England, accounted for his conduct by alleging a mutiny in his ship, and had several of his sailors tried and executed on that charge."* We are here forcibly reminded of the old Munchausen story, where one man declares that he drove a nail through the moon, and his companion, determined both to back and to outdo him, swears he clinched it.

Proved
to be
Loire
frigate.

Her
badly
manned
state.

To captain Lloyd's regret, even had the Constitution been in company with the President, the Plantagenet, (whose crew was one of the finest and best disposed in the service,) at noon on the 18th of February, the day on which this "strange" event happened, was in latitude 25° 27' north, longitude 43° 45' west, steering east-south-east, or towards Carlisle bay, Barbadoes. No: it was the british 38-gun frigate Loire, captain Thomas Brown, that lay off the Hook. At 9 h. 40 m. A. M. the Loire first descried the President in the north-north-west, and, with the wind from the west-south-west, made all sail in chase; but at 10 h. 30 m., making out the President to be what she was, the Loire shortened sail and hauled to the wind. The fact is that, out of her complement of 352 men and boys, the Loire had 75 of her best men, including of course several officers and petty officers, absent in prizes; and, of the remaining 277, nearly 20 were boys, and about 40 too sick to attend their quarters: consequently, the effective crew of the Loire did not exceed 220 men. Had the Loire been fully manned, we may readily infer what course captain Brown would have pursued; and, as his complement was ample, and he had been particular in exercising his men at the guns, if the President, contrary to what her movements indicated, had waited to engage, commodore Rodgers, in all probability, would have found the conquest of a british

* Sketches of the War, &c. p. 240.

18-pounder frigate, by an american 44, not so easy 1814.
a task as he had been led to expect. Feb.

We formerly noticed the sailing, on the 27th of October, 1812, of the United States' 32-gun frigate Essex, captain David Porter, from Delaware bay, on a cruise in the Pacific, conjointly with the Constitution and Hornet.* Not finding either of these ships at the appointed rendezvous, captain Porter resolved to proceed alone round Cape Horn; and on the 14th of March, 1813, having previously captured the british packet Nocton and taken out of her 11000*l.* sterling in specie, the Essex arrived at Valparaiso, on the coast of Chili. Captain Porter here refitted and provisioned his frigate, and then cruised along the coast of Chili and Peru, and among the Gallapagos islands, until October; by which time he had captured 12 british whale-ships.

Having taken several american seamen out of a peruvian corsair and decoyed several british seamen out of his prizes, captain Porter armed and manned two of the whale-ships as cruisers. One of them, late the Atlantic, but newly named the Essex-Junior, was armed with 20 guns, (10 long 6-pounders and ten 18-pounder carronades,) and manned with a crew, officers included, of 95 men; and lieutenant John Downes, who had the command of her, taking under his charge the Hector, Catherine, and Montezuma, proceeded with them to Valparaiso. On the return of the Essex-Junior from this service, the Essex, with the remaining three prizes, (three having been sent to America, and two given up to the prisoners,) steered for the island of Nooaheevah, one of the Marquesas. Here captain Porter completely repaired the Essex; and, sailing thence on the 12th of December, in company with the Essex-Junior, returned, on or about the 12th of January, 1814, to Valparaiso.

On the 8th of February, at 7 A. M., the british

* See p. 182.

1814. 18-pounder 36-gun frigate *Phœbe*, captain James Hillyar, accompanied by the 18-gun ship-sloop *Cherub*, captain Thomas Tudor Tucker, when standing in towards the harbour of Valparaiso, in quest of the *Essex* and the three ships which captain Porter was represented to have armed, discovered the *Essex-Junior* off the port, and, shortly afterwards, the *Essex* herself and two of her three prizes, the *Montezuma* and *Hector*, at anchor within it. At 11 h. 15 m. A. M. captain Hillyar spoke the *Essex*; and at 11 h. 30 m. the *Phœbe* and *Cherub* anchored at no great distance from her. The established force of the *Phœbe* was precisely what we supposed it to be in May, 1811;* but, profiting by the example of the Americans, captain Hillyar had since mounted one swivel in the fore, two in the main, and one in the mizen top of the *Phœbe*, and had also fitted her 18-pounder boat-carronade, and another carronade, a 12-pounder, as broadside-guns. The force of the *Cherub* was 18 carronades, 32-pounders, on the main deck, and on the quarterdeck and forecastle six carronades, 18-pounders, and two sixes. The 46 guns of the *Essex* have already been described.†

Motto-flags hoisted on each side. On the 9th, at 9 A. M., captain Porter began his attempts upon the loyalty of the *Phœbe*'s seamen, by hoisting at his fore topgallantmast-head a white flag, with the motto, "FREE TRADE AND SAILORS' RIGHTS." This, in a little while, the *Phœbe* answered, with the St.-George's ensign, and the motto, "GOD AND COUNTRY, BRITISH SAILORS' BEST RIGHTS: TRAITORS OFFEND BOTH." On this the crew of the *Essex* manned her rigging and gave three cheers, which the *Phœbe*'s crew presently returned. On the 12th captain Porter's motto mania returned, and the *Essex* hoisted a flag inscribed with the words, "GOD, OUR COUNTRY, AND LIBERTY: TYRANTS OFFEND THEM."

On the 15th, at 7 A. M., the *Essex-Junior* was towed out of the harbour. At 8 A. M. the *Phœbe*

* See p. 31.

† See p. 123.

and Cherub weighed and stood after her; and at noon, finding she could not escape, the Essex-Junior returned to the anchorage, passing ahead of the Phoebe within pistol-shot. On the 23d, when the two british ships were cruising in the bay, the Essex weighed and stood out, but in about an hour resumed her station in the harbour. On the 25th captain Porter had his prize, the Hector, towed out to sea and set fire to. On the 27th, at about 6 h. 45 m. P.M., when the Phoebe was about four miles west-north-west of the anchorage, and the Cherub about six miles north by west of her, the Essex and Essex-Junior got under way with a light breeze from the westward, and stood out towards the british frigate. On seeing them approach, the Phoebe backed her main topsail and hoisted her colours. At this moment, by a mere accident as it appears, a gun went off from the Phoebe's windward side. This was at once interpreted by captain Porter into a challenge. At 7 h. 20 m. P.M., as the Phoebe was in the act of wearing to bring her starboard guns to bear, the Essex and Essex-Junior hauled to the wind on the starboard tack, and the former fired one gun to-windward. Soon after this little flourish, captain Porter and his lieutenant stood for the anchorage, followed by captain Hillyar under all sail.

Beyond a second attempt of the Essex-Junior to escape, made and frustrated on the 3d of March, nothing further of consequence happened until the 28th of the month, when the Essex put in practice a well-concerted plan for freeing herself from the further annoyance of her watchful enemy. It was the intention of captain Porter, as he himself states, to allow the Phoebe and Cherub to chase the Essex out of the bay, in order to afford to the Essex-Junior the opportunity of getting to sea; and, if the plan succeeded, the two american ships were to effect their junction at the Marquesas. The wind being, as it usually is, to the southward, any scheme that would draw the two british ships to the north-east or the

1814. lee side of the bay, could not fail to favour the
 March. escape of the two american ships. Accordingly, from about midnight to past 1 A. M. on the 28th, a quantity of blue-lights and rockets were burnt and thrown up in the north-east and in the north. The Phœbe and Cherub, as may be supposed, chased in those directions; but, finding no answer returned to the lights they each hoisted, the two captains suspected who were the makers of the signals, and again hauled to the wind. Daylight found the Essex and Essex-Junior at their moorings, and the two british ships rather too close to the port, to justify the american ships in attempting their escape.

 the
 shore.

A fresh south-south-east wind now blew, and so increased towards 3 P. M., that the Essex parted her larboard cable, and dragged her starboard anchor out to sea. Sail was presently set upon the ship; and seeing a prospect of passing to-windward of his two opponents, captain Porter began to chuckle at his good fortune in having been blown out of the harbour. Just, however, as the Essex was rounding the point at the west end of the bay, the accomplishment of which would have set captain Porter free, a heavy squall struck the ship and carried away her main topmast. The Essex now bore up, followed by both british ships, and at 3 h. 40 m. anchored within half a mile of the shore, in a small bay about a mile to the eastward of Point Caleta. The Essex then hoisted one motto-flag at the fore, and another at the mizen, topgallantmast-head, and one american ensign at the mizen peak, and lashed a second in the main rigging. Not to be outdone in decorations, the two british ships hoisted their motto-flags, along with a handsome display of ensigns and union-jacks.

Phœbe
 com-
 mences
 firing
 at her.

At 4 P. M., when the Phœbe was standing towards the starboard quarter of the Essex, at about a mile distant, a squall from the land caused the ship to break off, and prevented her from passing, as had been captain Hillyar's intention, close under the american frigate's stern. At 4 h. 10 m., having fetched as

near as the wind would permit, the Phœbe commenced firing her starboard guns, but with very little effect owing to the great distance. In five minutes more the Cherub, who lay on the Phœbe's starboard quarter, opened her fire; the Essex returning the fire of both ships with three long 12-pounders run out of her stern ports. At 4 h. 30 m. P. M. the two british ships, being very near the shore, ceased firing, and wore round on the larboard tack. While the Phœbe was wearing, a shot from the Essex passed through several folds of her mainsail as it hung in the brails, and prevented it from being reset in the strong wind which was then blowing. Her jib-boom was also badly wounded, and her fore, main, and mizen stays shot away. Having, besides increasing her distance by wearing, lost the use of her jib, mainsail, and main stay, the Phœbe was now at too great a distance to fire more than one or two random shot. At 4 h. 40 m. the Phœbe tacked towards the Essex; and captain Hillyar soon afterwards informed captain Tucker, by hailing, that it was his intention to anchor, but that the Cherub must keep under way.

1814.
March.
Cherub
also.

On closing the Essex at 5 h. 35 m., the Phœbe recommenced a fire from her bow guns; which was returned by the former, the weather at this time nearly calm. In about 20 minutes the Essex hoisted her flying jib, cut her cable, and, under her foresail and fore topsail, endeavoured to run on shore. This exposed her to a tolerably warm cannonade from the Phœbe; but the Cherub, owing to the baffling winds, was not able to get near. Just as the Essex had approached the shore within musket-shot, the wind shifted from the land, and paid her head down upon the Phœbe. That not being a course very desirable to captain Porter, the Essex let go an anchor, and came to within about three quarters of a mile of the shore.

The object now was to get the specie and other

1814. valuables in the ship removed on shore; and, as the
 March. boats of the Essex had been nearly all destroyed, it
 was considered fortunate that lieutenant Downes was
 present with the three boats from the Essex-Junior.
 Lands specie, &c. and surren- A portion of the british subjects belonging to the
 ders. crew took this opportunity of effecting their escape;
 and others, alarmed by captain Porter's report that
 "flames were bursting up each hatchway," flames of
 which not a trace could afterwards be discovered,
 leaped overboard to endeavour to reach the shore.
 In the midst of all this confusion, at about 6 h. 20 m.
 P. M., the Essex hauled down her numerous flags,
 and was taken possession of just in time to save the
 lives of 16 of her men, who were struggling in the
 waves: 31 appear to have perished, and between
 30 and 40 to have reached the shore.

Da- The damages of the Phœbe were trifling. She
 mage and had received seven 32-pound shot between wind
 and loss on and water, and one 12-pound shot about three feet
 board Phœbe under water. Her main and mizen masts, and her
 and Cherub sails and rigging, were rather seriously injured.
 Out of her crew of 278 men, and 22 boys, total 300,
 the Phœbe had her first lieutenant (William Ingram)
 and three seamen killed, four seamen and marines
 severely, and three slightly wounded. The Cherub's
 larboard foretopsail sheet was shot away, and replaced
 in five minutes: several of her lower shrouds were
 cut through, also the main topmast-stay, and most of
 the running rigging; and three or four shot struck
 her hull. One marine killed, her commander se-
 verely, and two marines slightly, wounded, was all
 the loss which that ship sustained; making the total
 loss on the british side five killed and 10 wounded.
 When the Essex was boarded by the british officers.
 buckets of spirits were found in all parts of the main
 deck, and most of the prisoners were in a state of
 intoxication. This decided proof, that "american
 sailors want no grog," accounts for the Phœbe and
 Cherub having sustained their principal injury during

the first three broadsides. Afterwards, the firing of 1814 the Essex became very irregular; and nearly all her shot went over the british ships.

The damages of the Essex were confined to her upperworks, masts, and rigging. "The battered state of the Essex," says captain Porter, "will, I believe, prevent her ever reaching England." There is strong reason to believe that the greater part of the Essex-Junior's crew came on board the Essex, and returned when the colours were about to be struck; but we shall consider the american frigate to have commenced action with only 260 men, and five lads or boys. Out of this number, the Essex, as far as is borne out by proof, (the only safe way where an American is concerned,) had 24 men killed, including one lieutenant, and 45 wounded, including two acting lieutenants and the master. But captain Porter, thinking by exaggerating his loss, both to prop up his fame and account for the absentees of his crew at the surrender, talks of 58 killed and mortally wounded, 39 wounded severely, and 27 slightly. How then did it happen, that 23 dead (lieutenant Wilmer had been previously knocked overboard and drowned) were all that were found on board the Essex, or that were reported as killed to the British? As only 42 wounded were found in the Essex, and only three were acknowledged to have been taken away by lieutenant Downes, what became of the remaining 21? The loss, too, as we have given it, is quite as much as from the damages of the Essex one might suppose that she had sustained. But it is captain Porter, the author of the "Journal of a Cruise into the Pacific, &c.," who has made these extraordinary statements; therefore, no more need be said about them.

For having done what was done, no merit is claimed by the two british captains. They had heard so much of american prowess, that they expected little short of being blown out of the water; and yet, after the Essex had struck, the Phoebe, without the

action.

1814. assistance of the Cherub, was ready to tackle with another american frigate of the same force. On the 31st of May the Phœbe and Essex, the latter commanded by lieutenant Charles Pearson, set sail for England; and on the 13th of November, having stopped some time at Rio-Janeiro, the two ships anchored in Plymouth sound. Lieutenant Pearson was immediately promoted to the rank of commander.

Ac-
count
of capt.
Porter's
prizes.

Let us now endeavour to trace what became of the 12 whale-ships captured by the Essex. On the 25th of July, 1813, captain Porter despatched home the Georgiana armed with 16 guns, manned with a lieutenant and about 40 men, and laden with a "full cargo of spermaceti oil, which would be worth, in the United States, about 100000 dollars." She was captured in the West Indies, by the 18-pounder 36-gun frigate Barrossa. The Policy, laden also with a full cargo of oil, was retaken by the Loire frigate; and the New-Zealander, having on board "all the oil of the other prizes," by the Belvidera. The Rose and Charlton were given up to the prisoners. The Montezuma, it is believed, was sold at Valparaiso. The Hector and Catherine, with their cargoes, were burnt at sea. The Atlantic, afterwards called the Essex-Junior, was disarmed by the orders of captain Hillyar, and sent to America as a cartel. The Sir-Andrew-Hammond was retaken by the Cherub; the Greenwich, burnt by the orders of the american officer in charge of her; and the Seringapatam, taken possession of by her american crew. The mutineers carried her to New South-Wales; whence she was brought to England, and delivered up to her owners, on payment of salvage. Thus have we the end of all the "prizes taken by the Essex, in the Pacific, valued at 2500000 dollars;" and, as another item on the debit side of captain Porter's account, the Essex herself became transferred to the british navy.

Letter
of capt.
Hillyar

At the risk of being charged with impiety, we must express a wish that, instead of announcing his success in the words: "It pleased the Almighty

Disposer of events to bless the efforts of my gallant companions, and my personal, very humble ones, with victory," captain Hillyar had stated, in a plain manner, the surrender of the Essex, and left the public to judge, by what means, other than the well-directed 18-pounders of the Phœbe, the comparatively unimportant event had been brought about. It was only a few months before, that an american commander announced his success over a lilliputian british fleet on Lake Erie, in the following words: "It has pleased the Almighty to give to the arms of the United States a signal victory over their enemies on this lake." We remember, also, looking over the log-books of british ships, and some hundreds have passed under our inspection, once coming to the words, "Mustered the crew and read prayers for the victory." And what was the "victory"? Why, the success of three ships over one, and that not until after the sacrifice of nearly 100 lives. In our view of the matter, appeals to the Deity on such occasions of blood and carnage are, to say the least of them, quite at variance with the spirit of true religion.

The best part of captain Hillyar's public letter is, we think, the following passage: "The defence of the Essex, taking into consideration our superiority of force, the very discouraging circumstance of her having lost her main topmast, and being twice on fire, did honour to her brave defenders, and most fully evinced the courage of captain Porter, and those under his command. Her colours were not struck, until the loss in killed and wounded was so awfully great, and her shattered condition so seriously bad, as to render further resistance unavailing." Captain Hillyar penned this encomium two days after the action, and nothing could better evince the goodness of his heart; but he soon found that he had praised the unworthy. As one proof among many that could be adduced, captain Porter, in a letter dated in July, accuses captain Hillyar of acting towards him with "perfidy." Yet the conduct of this same

Frolic
 strikes
 to Or-
 pheus
 and
 Shel-
 burne
 without
 resist-
 ance.

Early in the month of February the first launched of the american "18-gun" ship-sloops, of which we formerly gave some account,† the Frolic, commanded by master-commandant Joseph Bainbridge, sailed from Portsmouth, New-Hampshire. On the 20th of April, at daylight, latitude 24° 12' north, longitude 81° 25' west, the Frolic fell in with the british 18-pounder 36-gun frigate Orpheus, captain Hugh Pigot, and 12-gun schooner Shelburne, lieutenant David Hope. When the chase commenced, both british ships were to-leeward; but, in an hour or two, the schooner weathered the american ship. At a few minutes past noon the Orpheus, then on the Frolic's lee quarter, standing upon the opposite tack, fired two shot, both of which fell short. However, they produced as good an effect as if they had struck the american ship between wind and water; and, in about half an hour, just as the Shelburne was closing her, down went the "star-spangled banner" and its stripes from the Frolic's mizen peak. As soon as the Orpheus, who was but an indifferent sailer, could get near enough to take possession of her, this fine american sloop of war was found with 171 officers and men, all "high-minded Americans," on board.

Shame-
 ful pro-
 ceed-
 ings
 of the
 Ameri-
 cans on
 board.

According to the report of the british officers, this gentle surrender was attended with a circumstance in other respects disgraceful to the Frolic's officers and crew. The locks of the great guns were broken, and the muskets, pistols, pikes, swords, bar and chain shot, &c. were thrown overboard, together with the pendant that was struck! A Nassau paper, of the 25th of April, adds: "The purser's store-room was next sacked; then the men got into the gun-room and the captain's cabin, and pillaged them.

* Brenton, vol. v. p. 161.

† See p. 214.

In short, the ship, we are told, bore the semblance of a town given up to the pillage of soldiery." Perhaps these gentlemen were determined that, as their ship had not behaved like a man of war, they would destroy all appearance of her having been one.

We should not have hesitated to call a french, or even a british captain, who had acted as master-commandant Joseph Bainbridge of the United States' navy did in this instance act, a ———; but we will not again soil our pages with a name that, in the few instances in which it occurs, has not, we trust, been wrongfully applied. The court of inquiry, which sat upon the Frolic's loss, "honourably acquitted" the officers and crew. One excuse was, that the lee guns of the american ship had been thrown overboard. So they were, but not until long after the Orpheus had begun chasing her. Captain Bainbridge might as well have urged, that he had no locks, pistols, &c., because he and his crew had destroyed and thrown them overboard just before possession was taken.

The master-commandant, who performed this exploit, is the brother of the commodore, who did so much for the national glory by capturing the Java; and, from his great interest, (a sway that even republics can feel,) the former is now a captain. Let, then, captain Joseph Bainbridge, if the subject be not a sickening one to him, turn over these pages, and count how many instances he can find of conduct like his own. Enough of such a character: suffice it, that the British became possessed, at an easy rate, of a finer 22-gun ship than any they had previously owned; a vessel with excellent quarters, and of extraordinary large scantling. The Frolic, or Florida, as she was newly named, came into british possession very opportunely for elucidating the merits of the three actions which we have next to record.

On the 23d of February the british 18-gun brig-sloop Epervier, captain Richard Walter Wales,

tion.

1814. (sixteen 32, and two 18 pounder* carronades,) cruising off Cape Sable, captured, without opposition, the american privateer-brig Alfred, of Salem, mounting 16 long 9-pounders, and manned with 108 men; the british 38-gun frigate Junon, captain Clotworthy Upton, in sight about 10 miles to-leeward. On his way to Halifax with his prize, captain Wales discovered that a part of his crew had conspired with the late crew of the Alfred, to rise upon the british officers, and carry one vessel, if not both, into a port of the United States. As the readiest mode to frustrate the plan, captain Wales persevered against a gale of wind, and on the 25th arrived at Halifax. He immediately represented to the commanding officer of the port, the insufficiency of the Epervier's crew for any service; and, in particular, expressed his doubts about their loyalty, from the plot in which they had recently been engaged. However, the affair was treated lightly; and on the 3d of March the Epervier, without a man of her crew being changed, sailed, in company with the Shelburne schooner, for the "protection" of a small convoy bound to Bermuda and the West Indies.

Having reached her outward destination in safety, the Epervier, on the 14th of April, sailed from Port-Royal, Jamaica, on her return to Halifax; and, as if the reputation of her officers and of the flag she bore was not enough for such a crew as the Epervier's to be intrusted with, the brig took on board at Havana, where she afterwards called, 118000 dollars in specie. On the 25th of April the Epervier sailed from Havana, in company with one of the vessels, an hermaphrodite brig bound to Bermuda, which she had convoyed from Port-Royal. On the 29th, at about 7 h. 30 m. A. M., latitude $27^{\circ} 47'$ north, longitude $80^{\circ} 7'$ west, a ship under russian colours, from Havana bound to Boston, joined the Epervier, then

* These captain Wales had taken on board at Halifax, in lieu of the two long sixes and launch-carronade.

steering north by east, with the wind about east-south-east. Shortly afterwards a large ship was discovered in the south-west, apparently in chase of the convoy. At 9 A. M. the Epervier hauled to the wind on the larboard tack, so as to keep between her convoy and the stranger; whom we may at once introduce as the United-States' ship-sloop Peacock, of 20 carronades, 32-pounders, and two long 18s, captain Lewis Warrington, from New-York since the 12th of March.

1814.
April.

No answer being returned to the brig's signals, the english ensign and pendant flying on board the Peacock did not remove the suspicions of her being an enemy; and accordingly the Epervier made the signal to that effect to her convoy. At 9 h. 40 m. A. M. the Peacock, who had approached rapidly on account of the wind having veered to the southward, hauled down the english colours, and hoisted the american flag at almost every mast and stay. At 10 A. M., when within half gun-shot of the Epervier, the Peacock edged away, as if to bring her broadside to bear in a raking position. This the brig evaded by putting her helm up, until close on the Peacock's bow, when she rounded to and fired her starboard guns. With this their first discharge, the three aftermost carronades became unshipped by the fighting-bolts giving way. The guns, however, were soon replaced; and, having, when she got abaft the beam of her opponent, tacked and shortened sail, the Epervier received the broadside of the Peacock, as the latter kept away with the wind on the larboard beam. Although the first fire of the american ship produced no material effect, a continued discharge of star and bar shot cut away the rigging and sails of the brig, and completely dismantled her. Just as the Epervier, by a well-directed fire, had brought down her opponent's fore yard, several of the carronades on the larboard side behaved as those on the starboard side had done, and continued to upset, as often as they were replaced and discharged.

ades
unship.

1814. In the midst of this confusion, the main boom, having been shot away, fell upon the wheel, and the Epervier, having had her head-sails all cut to pieces, became thrown into a position to be raked; but, fortunately for the brig, the Peacock had too much headway, to rake her with more than two or three shot. Having by this time shot away the brig's main topmast, and rendered her completely unmanageable, the Peacock directed the whole of her fire at her opponent's hull, and presently reduced the Epervier's three waist guns to the disabled state of the others. At 11 A. M., as if the defects in the fighting-bolts were not a sufficient disaster, the breeching-bolts began to draw. There being no immediate remedy here, an effort was made to get the brig round, in order to present a fresh broadside to the enemy; but it was found impracticable, without falling on board the Peacock.

As a last resource, and one which British seamen are generally prompt to execute, Captain Wales called the crew aft, to follow him in boarding; but these gentlemen declined a measure so fraught with danger. The Epervier having now one gun only wherewith to return the fire of the 11 guns of her antagonist; being already with four feet and a half water in her hold, and her crew falling fast beneath the heavy and unrelenting fire of the Peacock, no alternative remained but to strike the colours, to save the lives of the few remaining good men in the vessel. This was done at 11 h. 5 m. A. M., after the firing had lasted an hour; during three quarters of which the vessels lay close together, and during more than half of which, owing to the defects in the brig's armament, the successful party had it all to himself.

Besides the damages already detailed, the Epervier had her fore rigging and stays shot away, her bowsprit badly wounded, and her foremast cut nearly in two and left tottering, and which nothing but the smoothness of the water saved from falling. Her

side.

hull, as may be imagined, was pierced with shot-holes on the engaged or larboard side, both above and below water. The brig's loss, out of a crew of 101 men and a passenger, and 16 boys, amounted to eight killed and mortally wounded, and 15 wounded severely and slightly, including among the former her very gallant first lieutenant, John Hackett; who, about the middle of the action, had his left arm shattered, and received a severe splinter-wound in the hip, but who yet would hardly suffer himself to be carried below. Captain Warrington states, we believe with truth, that the Peacock's principal injury was the wound in her fore yard. Not a shot, by his account, struck the ship's hull; and her loss, in consequence, out of a crew of 185 picked seamen, without a boy among them, amounted to only two men wounded, neither of them dangerously.

1814.
Apr. 1.

A statement of comparative force would, in this case, be next to a nullity; as how could we, with any show of reason, confront eight carronades that overset the moment they were fired, with 10 carronades that remained firm in their places to the last. For any damage that such a vessel as the Epervier could have done to her, the Peacock might almost as well have fought with the unarmed russian ship that had just quitted the former's company, and then have boasted, as captain Warrington did, how many shot the Peacock placed in her antagonist's hull, and how free from any she escaped in her own.

Re-
marks
on the
action.

At the time she engaged the Peacock, the Epervier had but three men in a watch, exclusively of petty officers, able to take helm or lead; and two of her men were each 70 years of age! She had some blacks, several other foreigners, lots of disaffected, and few even of ordinary stature: in short, the crew of the Epervier was a disgrace to the deck of a british man of war. Had, instead of this, the Epervier been manned with a crew of choice seamen, equal in personal appearance to those received out of the Chesapeake and Argus, after they had been

Her
bad-
man-
ned
state.

1814. respectively carried by boarding, we might have
 June. some faith in captain Porter's assertion, that british
 seamen were not so brave as they had been represented. But, shall we take the Epervier's crew as a sample of british seamen? As well might we judge of the moral character of a nation by the inmates of her jails, or take the first deformed object we meet, as the standard of the size and shape of her people.

Defects
 in the
 guns
 evi-
 dence
 of want
 of prac-
 tice.

We must be allowed to say that, had the Epervier's carronades been previously fired in exercise, for any length of time together, the defect in the clinching of her breeching-bolts, a defect common to the vessels of this and the smaller classes, nearly all of them being contract-built, would have been discovered, and perhaps remedied. Even one or two discharges would have shown the insufficiency of the fighting-bolts. We doubt, however, if any teaching at the guns could have amended the Epervier's crew: the men wanted, what nature alone could give them, the hearts of Britons.

Rein-
 deer

 coun-
 ters
 and en-
 gages
 Wasp.

On the 28th of June, at daylight, latitude $48^{\circ} 36'$ north, longitude $11^{\circ} 15'$ west, the british 18-gun brig-sloop Reindeer, captain William Manners, steering with a light breeze from the north-east, discovered and chased in the west-south-west the United States' ship-sloop Wasp, captain Johnston Blakeley. The latter was the sister-ship to the Peacock and armed every way the same. The Reindeer, built of fir in 1804, was a sister-brig to the Epervier, but not so heavily armed, having, on account of her age and weakness, exchanged her 32-pounder carronades for 24-pounders; 16 of which, with two sixes and a 12-pounder boat-carronade, formed her present armament.

By 1 p. m. the two vessels had approximated near enough to ascertain that each was an enemy; and, while one manœuvred to gain, the other manœuvred to keep, the weathergage. At 2 p. m. the Wasp hoisted her colours, and fired a gun to-windward; and immediately the Reindeer, whose colours had

been previously hoisted, fired a gun also to-wind-ward, as an answer to the challenge. At 3 h. 15 m. p. m., being distaut about 60 yards on the Wasp's starboard and weather quarter, the Reindeer opened a fire from her boat-carronade mounted upon the topgallant forecastle. This she repeated four times; when at 3 h. 26 m., putting her helm a-lee, the Wasp luffed up and commenced the action with the after carronade and the others in succession. The Reindeer returned the fire with spirit, and a close and furious engagement ensued.

1814.
June.

After the mutual cannonade had lasted about half an hour, the Reindeer, owing to her disabled state, fell with her bow against the larboard quarter of the Wasp. The latter immediately raked her with dreadful effect; and the american riflemen in the tops picked off the british officers and men in every part of the deck. It was now that captain Manners showed himself a hero. The calves of his legs had been partly shot away early in the action; yet did he keep the deck, encouraging his crew, and animating, by his example, the few officers remaining on board. A grape or canister shot passed through both his thighs: he fell on his knees, but quickly sprang up; and, although bleeding profusely, resolutely refused to quit the deck. Perceiving at this time the dreadful slaughter which the musketry in the Wasp's tops was causing among his crew, this gallant young officer called out to them, "Follow me, my boys, we must board." While with that object in view climbing into the Reindeer's rigging, two balls from the Wasp's main top penetrated his skull, and came out beneath his chin. Placing one hand on his forehead, and with the other convulsively brandishing his sword, he exclaimed, "O God!" and dropped lifeless on his own deck!

With equal lustre, is a blessing Heaven
Selects from all the choicest boons of fate,
And with a sparing hand on few bestows.—Glover.

1814. { Having lost, besides her captain, nearly the whole of her officers and more than half her men, the Reindeer was wholly unable to oppose the Wasp's overwhelming numbers. Accordingly, at about 4 P.M., the american crew rushed on board, and received possession of their hard-earned trophy from Mr. Richard Collins, the captain's clerk, the senior officer alive on deck.

Rein-
deer
surren-
ders.

{ In a line with her ports, the Reindeer was literally cut to pieces: her upperworks, boats, and spare spars were one complete wreck. Her masts were both badly wounded; particularly her foremast, which was left in a tottering state. Out of her crew of 98 men and 20 boys, the brig had her commander, purser, (John Thomas Barton,) and 23 petty officers, seamen, and marines killed, her first and only lieutenant on board, (Thomas Chambers,) one master's mate, (Matthew Mitchell,) one midshipman, (Henry Hardiman,) her boatswain, (all badly,) and 37 petty officers, seamen, and marines wounded; total, 25 killed, and 42 wounded, 27 of the number dangerously and severely. One of the men was wounded in the head by a ramrod; which, before it could be extracted, required to be sawed off close to the skull. The man, notwithstanding, recovered. After receiving this desperate wound, he, like his gallant chief, refused to go below; saying to those who begged him to leave his gun: "If all the wounded of the Reindeer were as well able to fight as I am, we should soon make the american strike."

Da-
mage
and
loss on
board
of her.

{ The sails and rigging of the Wasp were a good deal cut. "Six round shot and many grape," captain Blakeley says, struck her hull. We should imagine, from the Wasp's acknowledged loss, that a few more had either perforated her thick sides or entered at her port-holes. One 24-pound shot passed through the centre of the foremast; and yet it stood: a tolerable proof of its large dimensions. Out of 173 men and two boys in complement, the

Wasp.

Wasp had two midshipmen and nine seamen and marines killed and mortally wounded, and 15 petty officers, seamen, and marines wounded severely and slightly. Doubtless, a great part of the Wasp's loss arose from the determined efforts of the Reindeer's crew to board; but how, taking the relative numbers as they at first stood, could 98 men succeed against 173?

Notwithstanding this decided disparity of force, the weaker party was the assailant; nor can the british commander be accused of rashness, both vessels being "sloops of war." The force employed by the Wasp, stationed upon a floating body, varying a trifle in construction, would have entitled the Reindeer to seek her safety in flight. But, had she run from the Wasp, Mr. Madison would have exulted as much, in announcing that a british ship had been chased, as captured, by an american ship "of the same class;" and even Britons would have considered the act as a stigma upon the national character. This may be pronounced one of the best-fought sloop-actions of the war. The british crew had long served together, and captain Manners was the idol and delight of his men. They were called the pride of Plymouth. Gallant souls! they wanted but as many more like themselves as would have brought them in number within a fourth of their opponents; and the Americans would have had to rue the day that the Wasp encountered the Reindeer.

Re-
marks
on the
action.

On the 29th, in the afternoon, on a breeze springing up, the foremast of the prize went by the board; and on the same evening, finding the Reindeer too

ton.

It will appear surprising, that an action so pregnant with circumstances calculated to excite the sympathy of the brave of all nations, an action in the conduct of it, from first to last, so highly honourable to the character of the british navy, as that of the Reindeer and Wasp, should be altogether omitted by an english naval historian; by a writer, especially, who claims the honour to belong to that very profession of which the gallant Manners was a member. But every friend to the memory of the youthful hero, every well-wisher to the cause of the british navy, will rejoice to find, that captain Brenton has not even glanced at the action of the Reindeer and Wasp, when he discovers that, in the Avon's case, (to which we shall come presently,) the Wasp is described as a "brig," mounting eighteen 32-pounder carronades and two sixes, with 140 men.* Recollecting the mistake about the force of the Peacock, the Hornet's opponent,† we have not a doubt that captain Brenton would have made a similar mistake respecting the Reindeer; and then, what with underrating the force on one side and overrating it on the other, the merits of the action would have been entirely changed.

Wasp
sails
again
on a
cruise
and is
en-
gaged
by the
Avon.

On the 27th of August the Wasp, thoroughly refitted and manned, sailed from Lorient to resume her cruise; and on the 1st of September, at 7 P. M., latitude 30° north, longitude 11° west, going free on the starboard tack, with the wind at south-east, captain Blakeley fell in with the british 18-gun brig-sloop Avon, (sixteen 32-pounder carronades and two sixes,) captain the honourable James Arbuthnot,

* Brenton, vol. v. p. 141.

† See p. 282.

nearly ahead, steering about south-west. At 7 h. 1814.
34 m. P. M. the Avon made night-signals to the Wasp; ^{Aug.} which the latter, at 8 P. M., answered with a blue-light on the forecastle. At 8 h. 38 m. the Avon fired a shot from her stern-chase gun; and, still running on to the south-west, fired a second shot from her starboard and lee side. At 9 h. 20 m., being then on the weather quarter of the Avon, the Wasp was hailed by the latter, "What ship is that?" and answered by the question, "What brig is that?" The Avon replied with her name, but it was not heard on board the Wasp. The former again asked, "What ship is that?" and was told to heave to and she would be informed. The question was repeated, and answered to the same effect. An american officer then went forward on the Wasp's forecastle, and ordered the Avon to heave to; but the latter declined doing so, and at 9 h. 25 m. P. M. set her larboard foretopmast studding-sail.

At 9 h. 26 m. P. M. the Wasp fired her 12-pounder ^{Close} carronade: whereupon the Avon commenced the ^{action} action by a discharge from her larboard guns. The ^{com-} Wasp then kept away, and, running under the brig's ^{mences} lee, at 9 h. 29 m., opened her broadside. Almost the first fire from the american ship, consisting of star and bar shot, cut away, along with other parts of her rigging, the slings of the brig's gaff; and, on the immediate fall of the latter, the boom-mainsail covered the quarterdeck guns on the side engaged, the only ones that would at this time bear. Shortly afterwards the brig's mainmast fell by the board. Thus rendered completely unmanageable, the Avon ^{Avon's} lost all advantage to be derived from manœuvring; ^{carron-} and, what with the wreck lying upon some of her ^{ades} guns, and the upsetting of others from the usual ^{upset.} defects in their fastenings, the brig could make little or no return to the animated fire maintained by the Wasp; who, on this occasion, (recollecting what she had lately suffered by allowing the British

1814. an opportunity to board,) fought much more warily
 Aug. than in her action with the Reindeer.

Avon

ders
when
sinking
but
Castili-
an pre-
vents
Wasp
from
taking
possession.

At 10 h. 12 m. P. M., according to captain Blakeley's minutes, but at a time much nearer 11 P. M., as will presently be proved, the Wasp hailed the Avon, to know if she had surrendered, and received an answer in the affirmative. When, says captain Blakeley, "on the eve of taking possession," the Wasp discovered "a sail close on board of her." This sail was the british 18-gun brig-sloop Castilian, (same force as Avon,) captain David Braimer. It was exactly at 11 P. M. that the Castilian came near enough to ascertain that one vessel was a dismasted brig, (supposed to be the Avon,) and the other a ship. The Castilian immediately chased the Wasp, then without either light or ensign. After having hailed several times without effect, the Castilian, at 11 h. 40 m. P. M., fired her lee guns into, or rather, as it proved, over, the weather quarter of the Wasp; who, although this second opponent had only cut away her lower main cross-trees and damaged her rigging, did not return a shot, but made all sail before the wind.

Wasp
escapes

Repeated signals of distress having by this time been made by the Avon, the Castilian tacked and stood towards her; and on closing, at 11 h. 55 m., captain Braimer was informed by captain Arbuthnot, that the Avon was sinking fast. The Castilian immediately hoisted out her boats to save the people; and at 1 A. M. on the 2d, just as the last boat had pushed off from the Avon, the british brig went down: an irrefragable proof, that she had not surrendered until every hope of success or escape had vanished. Hoisting in her boats, the Castilian filled and made sail to the north-east, in search of the Wasp; but the latter had already run out of sight. As a reason for this, captain Blakeley has alleged, that he discovered two other vessels, besides the Castilian, in chase of him.

· Out of her 104 men and 13 boys, the Avon lost 1814.
 her first lieutenant (John Prendergrast) and nine ^{July.}
 seamen and marines killed and mortally wounded, ^{Losson}
 her commander, second lieutenant, (John Harvey,) ^{board}
 one midshipman, (John Travers,) and 29 seamen and ^{Avon}
 marines wounded severely and slightly. According ^{and}
 to captain Blakeley, the Wasp received only four ^{Wasp.}
 round shot in her hull, and, out of her acknowledged
 complement of 173 men, had but two killed and one
 wounded. The gallantry of the Avon's officers and
 crew cannot, for a moment, be questioned; but the
 gunnery of the latter appears to have been not a
 whit better than, to the discredit of the british navy,
 had frequently before been displayed in combats of
 this kind. Nor, from the specimen given by the
 Castilian, is it likely that she would have performed
 any better.

The Wasp, unfortunately for her brave officers ^{Wasp}
 and crew, never reached a port of the United States: ^{foun-}
 she foundered, as is supposed, between the 15th, ^{ders at}
 when she was off Madeira, and the end, of September. ^{sea.}
 To the merit justly due to the captain of the Wasp,
 for his conduct in his two ssuccesful actions, America
 must be contented to divide her claim; as captain
 Blakeley was a native of Dublin, and, along with
 some English and Scotch, did not, it may be certain,
 neglect to have in his crew a great many Irish. The
 construction of so fine a ship as the Wasp, and the
 equipment of her as an effective man of war, is that
 part of the merit, and no small part either, which
 belongs exclusively to the United States.

On the 12th of July the british cutter Landrail, of ^{Land-}
 four 12-pounder carronades and 19 men and boys, ^{rail en-}
 commanded by lieutenant Robert Daniel Lancaster, ^{gages}
 in her way across the British Channel with despatches, ^{and is}
 was chased by the american privateer schooner ^{captur-}
 Syren; and maintained with her a running fight of ^{ed by}
 one hour and 10 minutes, and a close action, within ^{Syren}
 pistol-shot, of 40 minutes, in all two hours. The ^{priva-}
 Landrail then surrendered, with the loss of seven ^{teer.}

1814, men wounded. Her sails were riddled with shot-holes, and her hull much struck. The Syren, whose force was one long 18-pounder on a travelling carriage, four long 6-pounders and two 18-pounder carronades, with a crew of 75 men, had three men killed, and 15 wounded, including some of her principal officers; a tolerable proof of the execution that may be done by two 12-pounder carronades, if well pointed. The action certainly reflects great credit on lieutenant Lancaster and his ship's company, or rather, his boat's crew.

American exaggeration on the subject
Land-rail recaptured.
Although the Landrail had not even room for another gun beyond the four she mounted, the american historians, in the first instance, gave her 10 guns, and afterwards, by way of amending their statement, 8 guns; at which the Landrail now stands in their prize-lists. The Landrail was recaptured on her way to the United States, and carried into Halifax, Nova-Scotia: consequently her valuable services as a cruiser were not lost to the british navy.

Ballahou engaged and is captured by Perry.
Much about the time that the Landrail encountered the Syren, the Ballahou of the same class as the former, but rigged as a schooner, and commanded by lieutenant Norfolk King, fell in with the american privateer schooner Perry, and, after a chase of 60 minutes, 10 of which they closely engaged, was captured. It is not known what loss was sustained on either side. The prize was carried into Wilmington, North-Carolina. The Ballahou's original armament consisted of four carronades, 12-pounders; but, according to the american papers, two only were mounted, the remaining two having been placed in the hold on account of bad weather. Her complement, admitting all to have been on board, was 20 men and boys. In an american prize-list now lying before us, the Ballahou appears with 10 guns. The Perry mounted five guns, one, a long 18 or 24 pounder, upon a pivot, and had a complement of 80 men. The Landrail and Ballahou were each

under 76 tons; the Syren and Perry of at least 180 tons each. 1814.

June.

After 15 or 16 precious months had been wasted in the experiment, the british government discovered that admiral sir John Warren was too old and infirm to carry on the war, as it ought to be carried on, against the Americans. Sir John was therefore recalled, and in the summer of 1814 vice-admiral sir Alexander Cochrane arrived at Bermuda to take the command on the coast of North-America. During the preceding winter the command of the british forces in the Chesapeake had been intrusted to captain Robert Barrie, of the 74-gun ship Dragon. In the latter end of May rear-admiral Cockburn in the 74-gun ship Albion, (into which he had shifted his flag from the Sceptre,) captain Charles Bayne Hodgson Ross, arrived in the bay and relieved captain Barrie. The first operation of any importance in the bay of Chesapeake, after rear-admiral Cockburn's arrival, was an attack upon a strong american flotilla fitted out at Baltimore, and intrusted to the command of a brave officer of the revolutionary war, commodore Joshua Barney, a native of Ireland. This flotilla consisted of the commodore's vessel, the Scorpion sloop, mounting eight carronades and a heavy long gun upon a traversing carriage, and 16 gun-boats, with one long gun in the bow and another in the stern, the largest of the vessels carrying 32-pounders and 60 men, and the smallest, 18-pounders and 40 men.

tuxent.

1814. ^{June.} Smith's point. That ship got under way, and, along with the schooner and the boats, proceeded in chase; but the shallowness of the water shortly compelled the Dragon to reanchor. In the mean time the flotilla had run for shelter into the Patuxent. By way of inducing commodore Barney to separate his force, captain Barrie now detached two boats to cut off a schooner under Cove point; but, not considering that his orders to give protection warranted such a risk, commodore Barney allowed the vessel to be burnt in his sight.

^{Flotilla re-treats to St.-Leonard's creek.} On the 6th the flotilla retreated higher up the Patuxent; and, being joined on the day following by the 38-gun frigate Loire, captain Thomas Brown, and 18-gun brig-sloop Jasseur, captain George Edward Watts, captain Barrie proceeded up the river with them, the St.-Lawrence, and the boats of the two 74s. The flotilla retreated about two miles up St.-Leonard's creek, where it could be reached by boats only; but the force of the latter was not equal to the attack. Captain Barrie endeavoured, however, by a discharge of rockets and carronades from the boats, to provoke the american vessels, which were moored in a close line abreast across the channel, to come down within reach of the guns of the ship, brig, and schooner, at anchor near the mouth of the creek. At one time the american flotilla got under way, and chased the boats to a short distance, and then returned to their moorings. With a view to force the flotilla to quit its station, detachments of seamen and marines were landed on both sides of the river, and the american militia, estimated at 300 or 400, retreated before them to the woods. The marines destroyed two tobacco-stores, and several houses converted into military posts; but still the flotilla remained at its moorings.

^{British land there and destroy stores, &c.} ^{The same at Benedict.} On the 15th of June the 32-gun frigate Narcissus, captain John Richard Lumley, joined the little squadron; and captain Barrie, taking with him 12 boats, containing 180 marines, and 30 of the black colonial

corps, proceeded up the river to Benedict. Here ^{1814.} the men disembarked, and drove into the woods, ^{June.} without a struggle, a number of militia, who left behind a part of their muskets and camp equipage, as well as a 6-pounder field-piece. After spiking the latter, and destroying a store containing tobacco, the British again took to their boats, except five or six men, who had probably strayed too far into the woods.

After quitting Benedict, captain Barrie ascended the river to Lower-Marlborough, a town about 28 miles from the capital of the United States. The party landed, and took possession of the place; the militia, as well as the inhabitants, flying into the woods. A schooner, belonging to a captain David, was captured, and loaded with tobacco. After this, having burnt, at Lower-Marlborough, and at Magruder's, on the opposite side of the river, tobacco-stores, containing 2800 hogsheads, and loaded the boats with stock, the detachment reembarked. The Americans collected a force, estimated at about 350 regulars, besides militia, on Holland's cliffs; but some marines, being landed, traversed the skirts of the heights, and reembarked without molestation, the american troops not again showing themselves, till the boats were out of gun-shot.

The blockade of commodore Barney's flotilla, and the depredations on the coasts of the Patuxent, by captain Barrie's squadron, caused great inquietude at Washington. At length an order reached the american commodore, directing him to destroy the flotilla, in the hope that the British, having no longer such a temptation in their way, would retire from a position so near to the capital. The order was suspended, owing to a proposal of colonel Wadsworth, of the engineers; who, with two 18-pounders upon travelling carriages, protected by a detachment of marines and regular troops, engaged to drive away the two british frigates from the mouth of the creek. The colonel established his battery behind an elevated

1914. ridge, which sheltered him and his men; and, on the
 } morning of the 26th of June a simultaneous attack
 July. by the gun-boats and battery was made upon the
 Loire and Narcissus. Owing to the effect of the
 colonel's hot shot, the unpracticability of bringing a
 gun to bear upon his position from either frigate,
 and the want of a sufficient force to storm and carry
 the battery, captain Brown retreated with the Loire
 and Narcissus to a station near Point Patience; and,
 with the exception of two barges, which put back,
 disabled apparently by the shot from the frigates,
 the american flotilla moved out of the creek, and
 ascended the Patuxent. The frigates sustained no
 loss on this occasion; but commodore Barney admits
 a loss of one midshipman and three men killed, and
 seven men wounded.

British On the 4th of July the 40-gun frigate Severn,
 land captain Joseph Nourse, joined the Loire and Nar-
 again cissus; and captain Nourse immediately despatched
 at St.- captain Brown, with the marines of the three ships,
 Leo- 150 in number, up St.-Leonard's creek. Here
 nard's two of commodore Barney's barges were found
 creek and quitPa- scuttled, owing to the damage they had received in
 tuxent. the action with the frigates. The barges, and
 several other vessels, were burnt, and a large tobacco-
 store destroyed. Soon after this, the British quitted
 the Patuxent.

Rear- On the 19th of July rear-admiral Cockburn,
 adm. having been joined by a battalion of marines, and a
 Cock- detachment of marine artillery, proceeded up the
 burn river Potomac, for the purpose of attacking Leonard's
 ascends town, the capital of St.-Mary's county, where the
 Poto- 36th United States' regiment was stationed. The
 mac, marines of the squadron under major George Lewis,
 and 36th United States' regiment was stationed. The
 landsat marines of the squadron under major George Lewis,
 Leo- were landed, whilst the boats pulled up in front of
 nard's the town; but, on discovering the marines, the
 town. enemy's armed force quitted the place, and suffered
 the British to take quiet possession. A quantity of
 stores, belonging to the 36th regiment, and a number
 of arms of different descriptions, were found there

and destroyed; and a quantity of tobacco, flour, provisions, and other articles, were brought away in the boats, and in a schooner which was lying off the town. Not a musket being fired, nor an armed enemy seen, the town was spared. 1814.
July.

A body of militia having assembled at a place called Nominy ferry, in Virginia, a considerable way up Nominy river, rear-admiral Cockburn, on the 21st, proceeded thither, with the boats and marines; the latter commanded by captain John Robyns, during the illness of major Lewis. The enemy's position was on a very commanding eminence, projecting into the water; but, some marines having been landed on its flank, and they being seen getting up the craggy side of the mountain, while the main body was disembarking at the ferry, the Americans fell back, and, although pursued for several miles, escaped with the loss of a few prisoners. The Americans had withdrawn their field-artillery, and hid it in the woods; fearing that, if they kept it to use against the British, they would not be able to retreat with it quickly enough to save it from capture. After taking on board all the tobacco and other stores found in the place, with a quantity of cattle, and destroying all the storehouses and buildings, the rear-admiral reembarked; and, dropping down to another point of the Nominy river, observed some movements on shore. Upon this he again landed with the marines. The Americans fired a volley, but, on the advance of the marines, fled into the woods. Every thing in the neighbourhood was therefore destroyed or brought off; and, after visiting the country in several other directions, covering the escape of the negroes who were anxious to join him, the rear-admiral quitted the river, and returned to the ships with 135 refugee negroes, two captured schooners, a large quantity of tobacco, dry goods, and cattle, and a few prisoners. Also at
Nominy
ferry.

On the 24th of July the rear-admiral went up St.-Clement's creek, in St.-Mary's county, with the boats The
same

1814. and marines, to examine the country. The militia
 Aug. showed themselves occasionally, but always retreated
 at St.- when pursued; and the boats returned to the ships
 Cle- without any casualty, having captured four schooners,
 ment's and destroyed one. The inhabitants remaining peace-
 creek. ably in their houses, the rear-admiral did not suffer
 any injury to be done to them, excepting at one farm,
 from which two musket-shot had been fired at the
 admiral's gig, and where the property was, in con-
 sequence, destroyed.

The rear-admiral proceeds up Machodic river, &c.
 On the 26th the rear-admiral proceeded to the
 head of the Machodic river, in Virginia, where he
 burnt six schooners, whilst the marines marched,
 without opposition, over the country on the banks of
 that river; and, there not remaining any other place
 on the Virginia or St.-Mary's side of his last anchor-
 age, that the rear-admiral had not visited, he, on the
 28th, caused the ships to move above Blackstone's
 island; and, on the 29th, proceeded, with the boats
 and marines, up the Wicomoco river. He landed at
 Hamburg and Chaptico; from which latter place he
 shipped a considerable quantity of tobacco, and
 visited several houses in different parts of the country;
 the owners of which living quietly with their families,
 and seeming to consider themselves and the neigh-
 bourhood to be at his disposal, the rear-admiral
 caused no farther inconvenience to them, than obliging
 them to furnish supplies of cattle and stock for the
 use of his forces, for which they were liberally paid.

Enters Yocomico river, and lands at Kin-sale.
 On the 2d of August the squadron dropped down
 the Potomac, near to the entrance of the Yocomico
 river, which the rear-admiral entered on the follow-
 ing day, with the boats and marines, and landed with
 the latter. The enemy had here collected in great
 force, and made more resistance than usual, but the
 ardour and determination of the rear-admiral's gallant
 little band carried all before it; and, after forcing
 the enemy to give way, the marines followed him
 10 miles up the country, captured a field-piece, and
 burnt several houses, which had been converted into

dépôts for militia arms, &c. Learning, afterwards, ^{1814.} that general Hungerford had rallied his men at Kinsale, the rear-admiral proceeded thither; and, ^{Aug.} although the position of the Americans was extremely strong, they had only time to give the British an ineffectual volley before the latter gained the height, when the Americans again retired with precipitation, and did not reappear. The stores found at Kinsale were then shipped without molestation; and, having burnt the storehouses and other places, with two old schooners, and destroyed two batteries, the rear-admiral reembarked, bringing away five prize schooners, a large quantity of tobacco, flour, &c. a field-piece, and a few prisoners. The american general Taylor was wounded and unhorsed, and escaped only through the thickness of the wood and bushes, into which he ran. The British had three men killed, and as many wounded. Thus 500 british marines, and 200 seamen and marine-artillery, penetrated 10 miles into the enemy's country, and skirmished, on their way back, surrounded by woods, in the face of the whole collected militia of Virginia, under generals Hungerford and Taylor; and yet, after this long march, carried the heights of Kinsale in the most gallant manner.

Coan river, a few miles below Yocomico, being ^{The same at Coan river and at St.-Mary's creek.} the only inlet on the Virginia side of the Potomac, that the rear-admiral had not visited, he proceeded on the 7th to attack it, with the boats and marines. After a tolerably quick fire on the boats, the enemy went off precipitately, with the guns. The battery was destroyed, and the river ascended; in which three schooners were captured, and some tobacco brought off. On the 12th the rear-admiral proceeded up St.-Mary's creek, and landed in various parts of the country about that extensive inlet; but without seeing a single armed person, although militia had formerly been stationed at St.-Mary's factory for its defence, the inhabitants of the state appearing to consider it wiser to submit, than to attempt opposition. On the 15th of August the rear-admiral

1814. again landed within St.-Mary's creek; but found, in the different parts of the country, the same quiet and submissive conduct on the part of the inhabitants, as in the places visited on the 12th.

Some hints thrown out by the british commissioners at the conference at Ghent, coupled with the rumoured destination of british troops shipping in the ports of France, induced the american commissioners to intimate to their government, that an attack upon the federal city would probably be made in the course of the summer of 1814. This notice reached Mr. Madison on the 26th of June; and, on the 1st of July, he submitted to his council a plan for immediately calling 2000 or 3000 men into the field, and holding 10000 or 12000 militia and volunteers, of the neighbouring states, in readiness to reinforce that corps. On the next day he created into a military district, the whole state of Maryland, the district of Columbia, and that part of Virginia north of the Rappahannock river, embracing an exposed coast of nearly 1000 miles; vulnerable at every point, and intersected by many large rivers, and by Chesapeake bay. On the 4th of July, as a further defensive preparation, the president made a requisition to the several states of the union, for 93500 militia, as authorized by law; designating their respective quota, and requesting the executive magistrates of each state, to detach and hold them in readiness for immediate service. Of these 93500 militia, 15000 were to be drawn from the tenth military district, or that surrounding the metropolis, for whose defence they were intended.

On the 2d of June the british 74-gun ship Royal-Oak, rear-admiral Pulteney Malcolm, captain Edward Dix, accompanied by three frigates, three sloops, two bomb-vessels, five ships armed en flûte, and three transports, having on board a body of troops under major-general Ross, sailed from Verdon road at the mouth of the Gironde. On the 24th of July the squadron arrived at Bermuda, and there

peake.

joined vice-admiral Cochrane, in the 80-gun ship Tonnant. On the 2d of August, having received on board the Tonnant major-general Ross and his staff, sir Alexander sailed, in company with the 18-pounder 36-gun frigate Euryalus, captain Charles Napier, for Chesapeake bay; and on the 14th of August arrived, and joined the Albion, rear-admiral Cockburn, off the mouth of the Potomac. On the next day major-general Ross, accompanied by rear-admiral Cockburn, went on shore to reconnoitre.

The rear-admiral's knowledge of the country, as well as the excellent plan he adopted to prevent surprise, enabled the two officers to penetrate further than would otherwise have been prudent. The thick woods that skirt, and the numerous ravines that intersect, the different roads around Washington, offer important advantages to an ambushing enemy. Rear-admiral Cockburn, therefore, in his frequent walks through the country, invariably moved forward between two parties of marines, occupying, in open order, the woods by the road-side. Each marine carried a bugle, to be used as a signal, in case of casual separation, or the appearance of an enemy. It was during the excursion with general Ross, that rear-admiral Cockburn suggested the facility of an attack upon the city of Washington; and general Ross determined, as soon as the troops should arrive from Bermuda, to make the attempt.

On the 17th of August rear-admiral Malcolm arrived with the troops, and joined vice-admiral Cochrane off the mouth of the Potomac; and the whole proceeded to the Patuxent, situated about 20 miles further up the bay. In the mean time captain James Alexander Gordon, of the 38-gun frigate Seahorse, with some vessels of the squadron, had been detached up the Potomac, to bombard Fort Washington, situated on the left bank of that river, about 14 miles below the federal city; and captain sir Peter Parker, with the 38-gun frigate Menelaus, had been sent up the Chesapeake, above Baltimore,

General Ross and rear-adm. Cockburn reconnoitre route to Washington.

British troops arrive from Europe

1814. **to create a diversion in that quarter. The direct**
 Intend- route to Washington, from the mouth of the Potomac,
 ed was up that river, about 50 miles, to Fort-Tobacco ;
 route thence, over land, by the village of Piscataway, 32
 of the miles, to the lower bridge across the eastern branch
 expedi- of the Potomac ; but, as no doubt could be enter-
 tion tained that this bridge, which was half a mile long,
 against and had a draw at the west end, would be defended,
 Wash- as well by a body of troops, as by a heavy sloop of
 ington. war and an armed schooner known to be in the river,
 a preference was given to the route up the Patuxent,
 and by Bladensburg ; where the eastern branch, in
 case of the bridge at that spot being destroyed,
 could be easily forded.

Troops Commodore Barney's gun-boats were still lying in
 land the Patuxent. An immediate attempt against this
 and flotilla offered two advantages ; one, in its capture
 british or destruction, the other, as a pretext for ascending
 boats the Patuxent, with the troops destined for the
 ascend attack of the federal city. Part of the ships, having
 Pa- advanced as high up the river as the depth of water
 tuxent. would allow, disembarked the troops, about 4000 in
 number, on the 19th and 20th of August, at Benedict,
 a small town, about 50 miles south-east of Wash-
 ington. On the 20th, in the evening, rear-admiral
 Cockburn, taking with him the armed boats and
 tenders of the fleet, having on board the marines
 under major Robyns, and the marine-artillery under
 captain James H. Harrison, proceeded up the river,
 to attack commodore Barney's flotilla ; and to supply
 with provisions, and, if necessary, afford protection
 to, the army, as it ascended the right bank. The
 boats and tenders were separated into three divi-
 sions. The first division was commanded by cap-
 tains Thomas Ball Sullivan and William Stanhope
 Badcock, the second, by captains Rowland Money
 and James Somervell, and the third, by captain
 Robert Ramsay ; and the whole was under the super-
 intendence and immediate management of captain
 John Wainwright, of the Tonnant. The frigates

Severn and Hebrus, captains Joseph Nourse and Edmund Palmer, accompanied by the brig-sloop Manly, captain Vincent Newton, had been also directed to follow the boats up the river as far as might prove practicable. 1814.
Aug.

On opening the reach above Pig point, the rear-admiral, who had just before been joined by captains Nourse and Palmer with the boats of their two frigates, which they could get no higher than Benedict, discovered commodore Barney's broad pendant in the headmost vessel, a large sloop, and the remainder of the flotilla extending in a long line astern of her. The british boats now advanced as rapidly as possible; but, on nearing the flotilla, the sloop bearing the broad pendant was observed to be on fire, and soon afterwards blew up; as did 15 out of the 16 remaining gun-boats. The one in which the fire had not taken, was captured. The rear-admiral found 13 merchant schooners, which had been under commodore Barney's protection. Of these, such as were not worth bringing away, were destroyed. The remainder were moved to Pig point, to receive on board the tobacco which had been there found. De-
struc-
tion of
com-
mo-
dore
Bar-
ney's
flotilla.

The destruction of this flotilla secured the right flank of the army under major-general Ross; who, on the afternoon of the 22d, with the troops, arrived and encamped at the town of Upper-Marlborough, situated about four miles up the western branch of the Patuxent. The men, therefore, after having been nearly three months on board ship, had, in less than three days, marched 40 miles; and that in the month of August, when the sultriness of the climate could scarcely be tolerated. While general Ross and his men were resting themselves at Upper-Marlborough, general Winder and his army, now joined by commodore Barney and the men of his flotilla, were lying at their encampment at the long Old-Fields, only eight miles distant. On the next morning the american troops were reviewed by Mr. Madison, "their commander in chief, whose martial Gene-
ral Ross
en-
camps
at
Upper-
Marl-
boro'.

1814. appearance gladdened every countenance and encouraged every heart."* Soon after the review, a detachment from the american army advanced along the road to Upper-Marlborough; and, after exchanging a few shot with the british skirmishers, fell back to the main body.

Aug. Rear-adm. Cockburn joins general Ross. On the 23d, in the morning, rear-admiral Cockburn, having left at Pig point, directly opposite to the western branch, the marines of the ships under captain Robyns, and two divisions of the boats, crossed over, with the third division, to Mount Calvert; and proceeded, by land, to the british encampment at Upper-Marlborough. The little opposition experienced by the army in its march from Benedict, and the complete success that had attended the expedition against commodore Barney's flotilla, determined major-general Ross to make an immediate attempt upon the city of Washington, distant from Upper-Marlborough not more than 16 miles. At the desire of the major-general, the marine and naval forces at Pig point were moved over to Mount Calvert; and the marines, marine-artillery, and a proportion of the seamen under captains Palmer and Money, joined the army at Upper-Marlborough.

British army advances towards Washington. As if by concert, the american army retired from the long Old-Fields, about the same time that the british army advanced from Upper-Marlborough; and the patrols of the latter actually occupied, before midnight, the ground which the former had abandoned. The american army did not stop until it reached Washington; where it encamped, for the night, near the navy-yard. On the same evening upwards of 2000 troops arrived at Bladensburg from Baltimore. On the 24th, at daylight, general Ross put his troops in motion for Bladensburg, 12 miles from his camp; and, having halted by the way, arrived, at about 11 h. 30 m. A.M., at the heights facing the village.

* Wilkinson's Mem, vol. i. p. 766.

According to a letter of general Armstrong, the american secretary at war, to the editor of the "Baltimore Patriot," general Winder had under his command, including the 15000 militia he had been directed to call out, as many troops and seamen, as would make his total force, when assembled, 16300 men; but an american writer gives the details of the general's force, in which he includes 600 seamen, and makes the total amount to only 7593 men. Of artillery, the american army had on the field not fewer than 23 pieces, varying from 6 to 18 pounders. This army was drawn up, in two lines, upon very commanding heights, on the north of the turnpike-road leading from Bladensburg to Washington; and, as an additional incitement to glory on the part of the american troops, their president was on the field.

The affair (for it hardly deserves the name of battle) of Bladensburg, ended, as is well known, in the rout of the Americans; from whom 10 pieces of cannon were taken, but not above 120 prisoners, owing to the swiftness with which the enemy went off, and the fatigue which the british army, about 1500 of whom only were engaged, had previously undergone. The retreating american troops proceeded, with all haste, towards Washington; and the british troops, including the rear-division, which, just at the close of the short scuffle, had arrived upon the ground, halted to take some refreshment. Had it not been for the american artillery, the loss of the British would have been very trifling. Under these circumstances, the loss, on the part of the army, amounted to one captain, two lieutenants, five sergeants, and 56 rank and file killed, two lieutenant-colonels, one major, one captain, 14 lieutenants, two ensigns, 10 sergeants, and 155 rank and file wounded, total, 64 killed and 185 wounded. The loss sustained by the naval department amounted to only one colonial marine killed, one master's mate, (Jeremiah M'Daniel,) two sergeants, and three colonial marines wounded; making a total of 65 killed

1814.

1814. and 191 wounded. The officers of the navy and of the marines, who, besides rear-admiral Cockburn, were present in the battle, appear to have been captain Edmund Palmer, with his aide-de-camp, midshipman Arthur Wakefield, lieutenant James Scott, first of the Albion, acting as rear-admiral Cockburn's aide-de-camp, lieutenant John Lawrence, of the marine artillery, and lieutenant of marines Althestan Stephens.

British
army
enters
Wash-
ington.

As soon as the troops were refreshed, general Ross and rear-admiral Cockburn, with about 1000 men, moved forward from Bladensburg, and at 8 P.M. arrived at an open piece of ground, two miles from the federal city. The troops were here drawn up, while major-general Ross, rear-admiral Cockburn, and several other officers, accompanied by a small guard, rode forward to reconnoitre. On arriving opposite to some houses, the party halted; and, just as the officers had closed each other, in order to consult whether or not it would be prudent to enter the heart of the city that night, a volley was fired from the windows of one of two adjoining houses, and from the capitol: which volley killed one soldier, and general Ross's horse from under him, and wounded three soldiers. Rear-admiral Cockburn instantly rode back to the detachment stationed in advance, and soon returned with the light companies. The house was then surrounded; and, after some prisoners had been taken from it, set on fire: the adjoining house fell with it. The capitol, which was contiguous to these houses, and which, according to an american writer, was "capable of being made an impregnable citadel against an enemy, with little artillery, and that of the lighter class," was also set on fire.

Import-
ant
mis-
state-
ment
of capt.
Bren-
ton.

We are obliged to pause an instant, in order to correct a very serious mistatement, which, as the book, along with two or three others, lay open before us, we at first took to be the splenetic effusion of an american writer. But we owe an apology to the Americans; for the statement emanates from the pen of

a british naval officer, and here it is : "A little musketry ^{1814.} from one of the houses in the town, which killed the ^{Aug.} general's horse, was all the resistance they met with. This was quickly silenced; the house burnt, and the people within it put to death."* When it is considered, who are usually the inmates of a dwelling-house, the statement, that "the people within it were put to death" and that for "killing a horse," is calculated to fill the mind with horror, and to call forth execrations against the monsters who could perpetrate such an act. Fortunately for the fame of the general and admiral who presided on the occasion, the account we have just given, and the substance of which we published eight or nine years ago, is a faithful relation of all that occurred.

Scarcely had the flames burst out from the capitol ^{De-} and the two contiguous houses, than an awful explo- ^{struction of} sion announced, that the Americans were employed ^{the} upon the same business in the lower part of the city. ^{public} By this time the remainder of the british forces from ^{works,} ^{&c.} Bladensburg had arrived at the encampment. At 10 h. 30 m. P.M., after a party had been sent to destroy the fort and public works at Greenleaf's point, major-general Ross, and rear-admiral Cockburn, each at the head of a small detachment of men, numbering together not more than 200, proceeded down the hill towards the president's palace. Finding it utterly abandoned, and hearing probably that a guard of soldiers, with "two pieces of cannon, well mounted on travelling carriages,"† had been stationed at, and but recently withdrawn from, this the american "commander in chief's" head-quarters, rear-admiral Cockburn directed it to be set on fire. A log-hut, undersimilar circumstances, would have shared the same fate, and the justice of the measure not been disputed. Why, then, in a country where "equality of rights" is daily preached up, should the palace be

* Brenton, vol. v. p. 166.

† Testimony of Mr. William Simmons, before the american committee of investigation.

1814. held more sacred than the cottage? The loss of the
 Aug. one falls, where it ought, upon the nation at large; the loss of the other, a lamentable case at all times, solely upon the individual proprietor. To the building, containing the treasury and war offices, the torches of the conquerors were next applied. On arriving opposite to the office of the "National Intelligencer," the american government-paper, rear-admiral Cockburn observed to the inhabitants near him, that he must destroy it. On being told, however, that the adjoining buildings would be likely to take fire, he desisted. The rear-admiral, then, wishing the inhabitants "good night," and assuring them that private property and persons should be respected, departed to his quarters on the capitol-hill. Early on the next morning the rear-admiral was seen walking about the city, accompanied by three soldiers only. Indeed, general Wilkinson says: "A single sentinel, who had been accidentally left on post near the office of the National Intelligencer, kept undisturbed possession of the central part of the metropolis until the next morning; of which there are several living witnesses."* At this time too, it appears an american force, of more than 4000 combatants, was posted upon the heights of Georgetown, which is a continuation of the city to the westward.

Acci-
 dent to
 the
 British.

During the morning of the 25th the secretary of state's office was burnt, and the types and printing materials of the government-paper were destroyed. A serious accident had happened to the party sent to Greenleaf's-point. Some powder, concealed in a well, accidentally took fire, killing 12, and wounding 30, officers and men. The extensive rope-walks, at some distance from the city, were destroyed by the British; and so was an immense quantity of small arms and heavy ordnance, as well as the great bridge across the Potomac; a very prudent military measure, especially as the Americans had themselves

* Wilkinson, vol. i. p. 791.

destroyed the two bridges crossing the eastern branch. A party, under captain Wainwright, destroyed the few stores and buildings in the navy-yard, which had escaped the flames of the preceding night. As the British were in haste to be gone, and as the vessels, even could they have been floated in safety down the Potomac, were not wanted, it was very considerate in the american government to order the destruction of the frigate, of 1600 tons, which was nearly ready to be launched, and of the fine sloop of war, Argus, ready for sea; and whose 20 carronades, 32-pounders, and two long 18-pounders, would have assisted so powerfully in defending the entrance to the city by the lower bridge.

According to the official estimate of the public property destroyed, the value has been much over-rated. It appears not to have exceeded 1624280 dollars, or £365463 sterling. With respect to private property, we have only to quote passages from american prints, to show how that was treated. One newspaper says: "The british officers pay inviolable respect to private property, and no peaceable citizen is molested." A writer from Baltimore, under the date of August 27th, says: "The enemy, I learn, treated the inhabitants of Washington well." That the british officers did all they could to secure the inhabitants from injury, both in their persons and properties, may also be gathered from the acknowledgment of Mr. Thompson, another american writer, that "the plunder of individual property was prohibited, and soldiers, transgressing the order, were severely punished."

On the 25th, at 8 p. m., the British left Washington, by the way of Bladensburg. Here such of the wounded as could ride, or be transported in carriages, were provided with 30 or 40 horses, 12 carts and waggons, one coachee, and several gigs. With these, preceded by a drove of 60 or 70 cattle, the troops moved leisurely along. On the 29th, in the evening, they reached Benedict, 50 miles from

dict.

1814. **Washington**, without a single musket having been fired; and, on the following day, reembarked in the vessels of the fleet. No complaints, that we can discover, have been made against the British, during their retreat across the country; although, as an american writer has been pleased to say, "general Ross scarcely kept up his order, sufficiently to identify the body of his army."

Capt.
Gordon
with a
squa-
dron
ascends
Po to-
mac.

Of the many expeditions up the bays and rivers of the United States during the late war, none equalled in brilliancy of execution that up the Potomac to Alexandria. This service was intrusted to captain James Alexander Gordon, of the 38-gun frigate *Seahorse*, having under his orders the 18-pounder 36-gun frigate *Euryalus*, captain Charles Napier, bomb-ships *Devastation*, *Ætna*, and *Meteor*, captains Thomas Alexander, Richard Kenah, and Samuel Roberts, rocket-ship *Erebus*, captain David Ewen Bartholomew, and a small tender, or despatch-boat. On the 17th, at 9 h. 15 m. A. M., the squadron got under way from the anchorage at the entrance of the Potomac, and, without the aid of pilots, began ascending the intricate channel of the river leading to the capital of the United States. On the 18th the *Seahorse* grounded, and could only get afloat again by shifting her guns to the tenders in company. That done, and the guns returned to their places, the squadron again stood up the river. On the 25th, while passing the flats of Maryland point, a squall struck the squadron: the *Seahorse* had her mizenmast sprung; and the *Euryalus*, just as she had clewed up her sails to be in a state to receive it, had her bowsprit and the head of her foremast badly sprung, and the heads of all three topmasts fairly wrung off. Such, however, was the state of discipline on board the ship, that, in 12 hours, the *Euryalus* had refitted herself, and was again under way ascending the river.

Acci-
dent
to the
*Eury-
alus*.

On the 27th, in the evening, after each of the ships

had been aground not less than 20 times, and each time obliged to haul themselves off by main strength, and after having, for five successive days, with the exception of a few hours, been employed in warping a distance of not more than 50 miles, the squadron arrived abreast of Fort Washington. The bomb-ships immediately began throwing their shells into the fort, preparatory to an attack the next morning by the two frigates. On the bursting of the first shell, the garrison was observed to retreat; but, supposing some concealed design, captain Gordon directed the fire to be continued. At 8 p. m., however, all doubts were removed by the explosion of the powder magazine, which destroyed the inner buildings. On the 28th, at daylight, the British took possession of the fort, and of three minor batteries, mounting altogether 27 guns, chiefly of heavy caliber. The guns had already been spiked; and their complete destruction, with the carriages, was effected by the seamen and marines of the squadron. These forts were intended for the defence of Alexandria, the channel to which the British began immediately to buoy. A flag of truce now came off with a proposal to capitulate; and one hardly knows which to admire most, the prudence of captain Gordon, in postponing his answer to the common council of Alexandria, until, says he, "I was enabled to place the shipping in such a position, as would ensure assent to the terms I had decided to enforce," or the peremptory and humiliating conditions which he did enforce. It was in vain that the Americans had sunk their vessels; they must get them up again, and put them in the state in which they were, when the squadron passed the Kettle Bottoms; the owners of vessels must send on board their furniture without delay; merchandise removed must be brought back; and the merchants load their own vessels, which will be towed off by the captors!

The last article of the capitulation provides, that british officers are to see the terms "strictly com-

plied with." One of the officers sent on this service was midshipman John Went Fraser of the Euryalus, a mere stripling. Having strayed alone to some distance from his boat, two american naval officers rode at, as if to run over him; one, a very powerful man, caught the youth by the shirt-collar and dragged him, almost suffocating, across the pommel of the saddle, galloping off with him. Fortunately the shirt-collar gave way, and the lad fell to the ground. He was quickly upon his legs again, and ran towards a landing-place, where his boat was waiting; the American pursuing him. The boat and the men in it were hid under a steep bank or wall, and, on that account, could not level their carronade at the honourable gentleman as he approached. The instant he saw the boat's crew, he turned pale with fright; and rode off in a contrary direction, as fast as his horse could carry him. The american editors thought this a good joke; and very readily informed us, that one of these worthies was the famed captain David Porter, the other, and he that committed the atrocious and dastardly assault, master-commandant John Orde Creighton, an American by adoption only, and, we rather think, an Irishman. The first of these officers, for his "brilliant deeds at Valparaiso," had recently been appointed to the new frigate at Washington, whose name, to commemorate the exploits of captain Porter's favourite ship, had been changed from the Columbia to the Essex, and his gallant brother-horseman had been appointed to the new corvette Argus; both of which ships, it will be recollected, were burnt, and their intended commanders thrown out of employment, by the entry of the British into Washington, a few days previous. This is what infuriated the two heroes, and determined them to sacrifice the first straggling Briton they could find. At the time this outrage was committed, a flag of truce was flying before Alexandria; whose inhabitants, in a body, disavowed the act, reproaching it as became them. Such conduct on

their part alone prevented captain Gordon from enforcing the last article of the treaty. 1814.

After the British had retired from Washington, the Americans recovered a little from their panic; and took strong measures to oppose captain Gordon's return down the Potomac. Commodore Rodgers, with a chosen body of seamen from the *Guerrière* at Philadelphia, captains Perry, Porter, and other "distinguished officers," a party of officers and men from the *Constellation* at Norfolk, the men that had belonged to commodore Barney's flotilla, regular troops, riflemen, artillerists, and militia, all flocked to the shores of the Potomac, to "punish the base incendiaries." The american newspaper-editors, for some days, feasted their readers with the anticipated destruction of the british squadron. "It is impossible the ships can pass such formidable batteries, commanded by our naval heroes, and manned by our invincible seamen. We'll teach them how to draw up terms of capitulation."

On the 31st, early in the morning, the british 18-gun brig-sloop *Fairy*, captain Henry Loraine Baker, after having fought her way up the river past a battery of five guns and a large military force, joined captain Gordon with vice-admiral Cochrane's orders for him to return. On the same day, without waiting to destroy those remaining stores which he had not the means of bringing away, captain Gordon weighed on his return, accompanied by 21 sail of prizes, many of which, having been sunk by the enemy, had been weighed, masted, hove down, calked, rigged, and loaded, all within three days. Contrary winds again compelled the British to resort to the laborious task of warping the ships down the channel of the river, and a day's delay occurred by the grounding of the *Devastation*. Taking advantage of this circumstance, the Americans attempted the destruction of the bomb-ship, by means of three fire-vessels and five row-boats, directed in person by commodore Rodgers; but their object was defeated

The cool and steady conduct of midshipman John Moore, of the Seahorse, in towing the nearest fire-vessel on shore, while the others were removed from the power of doing mischief by the smaller boats of the Devastation, is spoken of in high and just terms of commendation by captain Gordon.

American batteries attack the squadron. Notwithstanding that the Meteor and Fairy, assisted by the despatch-boat, a prize gun-boat, and a boat belonging to the Euryalus, with a howitzer, had greatly impeded the progress of the Americans in their works, the latter were enabled to increase their battery from five to 11 guns, with a furnace for heating shot. On the 3d of September, the wind coming to the north-west, the *Ætna* and *Erebus* succeeded in getting down to the assistance of the Meteor and her companions. On the 4th the frigates and prizes reached the same spot; but the Devastation, in spite of the utmost exertions in warping her, still remained five miles higher up the river. This was the moment that the Americans made their greatest efforts to effect the destruction of the british squadron. The *Erebus*, who had been placed by her commander in an admirable position for harassing the workmen employed in the trenches, was attacked by three field-pieces; which, before they were beaten off, did the ship considerable injury. A second attempt was now made to destroy the Devastation by fire-vessels; but, owing to the alacrity with which captain Baker with the boats of the squadron went to her assistance, the American boats and fire-vessels retreated, and the ship was saved. In consequence of the Americans having sought refuge under some guns in a narrow creek, thickly wooded, and from which it was impossible

to dislodge them, captain Baker sustained a serious loss, including among the killed his second lieutenant, Charles Dickinson. 1814.
Sept.

On the 5th, at noon, the wind coming fair and every suitable arrangement having been made, the Seahorse and Euryalus anchored within musket-shot of the batteries, while the whole of the prizes passed between the frigates and the shoal. The three bomb-ships, the Fairy, and the Erebus, firing as they passed, anchored in a favourable position for facilitating, by means of their force, the further removal of the frigates. At 3 p. m., having completely silenced the fire of the american batteries, the Seahorse and Erebus cut their cables, and the whole squadron proceeded to the next position taken up by the american troops; who had here two batteries mounting from 14 to 18 guns, on a range of cliffs about a mile in extent, and close under which the ships were obliged to pass. It was not intended to make the attack that evening; but, the Erebus grounding within range of the batteries, the frigates and other vessels were necessarily called into action. On this occasion the fire of the Fairy produced the most decisive effect, as well as that of the Erebus, while the Devastation, Ætna, and Meteor threw their shells with admirable precision. In consequence of these vigorous measures, the american batteries, by 8 p. m., were completely silenced. On the 6th, at daylight, the british squadron again got under way; and, so satisfied were the whole of the parties on shore that their opposition was ineffectual, that they allowed the British to pass without further molestation. On the 9th the Seahorse and her companion sailed out of the Potomac, and came to an anchor in safety at the spot whence they had weighed 23 days before.

The toil and fatigue undergone by the officers and men, and the deprivations they so cheerfully submitted to, were equalled only by their gallantry in defeating the batteries on shore, and their skill and perseverance in surmounting the difficulties of

British ships engage and silence the batteries and are allowed to pass on unmolested.

Loss on board the squadron.

1814. a most intricate and dangerous navigation. Happily,
 Sept. the loss in this daring enterprise did not exceed,
 on board all the vessels, seven killed, including the
 Fairy's lieutenant already named, and 35 wounded,
 including captains Napier and Bartholomew, lieu-
 tenant Reuben Paine, and master's mate Andrew
 Reid, all slightly. Of the captains and other officers
 associated with him, and of lieutenants Henry King,
 first of the Seahorse, and Thomas Herbert, first of
 the Euryalus, captain Gordon, in his official letter,
 speaks in the highest terms; also of the master of
 the Seahorse, Mr. Alexander Louthean, "for both
 finding and buoying the channel of a navigation,
 which no ship of a similar draught of water had ever
 before passed with her guns and stores on board." It
 was stated by a seaman of the Seahorse, who had
 served on board the President, that that frigate did
 not accomplish the same task under a period of 42
 days, and then not without taking out her guns.

Sir
 Peter
 Parker
 lands
 with
 men
 from
 the Me-
 nelaus.

We formerly noticed that sir Peter Parker, of
 the Menelaus frigate, had been detached on service
 up Chesapeake bay. Having but recently arrived
 on the North American station, sir Peter was not
 aware of the ambushing tricks to which a small
 invading force would be exposed, in a country so
 filled with woods, ravines, and defiles; and where
 local knowledge, and skill with the rifle, were an
 overmatch for all the valour he could bring against
 them. Information having reached the ship, then
 at anchor off Moor's fields, that 200 american militia
 were encamped behind a wood distant about a
 mile from the beach, captain Parker, at 11 P. M. on
 the 30th of August, was induced to land with 104
 marines and 20 seamen, in two divisions, one com-
 manded by lieutenant Henry Crease, the other by
 lieutenant Robert Pearce.

It appears that colonel Read, the commander of
 the american force, stated at 170 Maryland volun-
 teers, having been apprized of the intended attack,
 had retired to a small open space, surrounded by

woods, distant four or five miles from his first encampment. Thither, having captured a small cavalry picket, the heedless seamen and marines, headed by their undaunted chief, proceeded. The enemy, with some pieces of artillery, was found drawn up in line in front of his camp. The British commenced the fire; and, charging, drove the Americans through their camp into the woods. It was about this time that sir Peter received a mortal wound. Secure behind the trees, the Americans levelled their pieces with unerring aim; while the British, deceived by the apparent flight of their wary foe, rushed on through the woods, until, bewildered and embarrassed, the survivors of this adventurous band were compelled to retreat to their ship; bringing away, however, the body of their lamented commander, and all their wounded but three. The British suffered a loss of 14 killed including sir Peter Parker and midshipman John T. Sandes, and 27 wounded, including both lieutenants of marines, Benjamin George Benyon and George Poe. The Americans, as a proof how little they exposed themselves, sustained a loss of not more than three men slightly wounded.

At the head of a narrow bay or inlet of the Patapsco river, and distant from its confluence with the Chesapeake about 14 miles, stands the city of Baltimore, containing about 50000 inhabitants. It is nearly surrounded by detached hills; one of which, Clinkapin hill, situated on its eastern side, commands the city itself, as well as the approach to it by land, from the Chesapeake. Its water approach is defended by a strong fortification, named Fort M'Henry, situated at the distance of about two miles from the city, upon the point of the peninsula that forms the south side of the bay or harbour; which, at its entrance, is scarcely a quarter of a mile in width. As an additional security, the Patapsco is not navigable for vessels drawing more than 18 feet

Prepa-
rations
for its
defence

The arrival of troops in the Chesapeake, and the subsequent operations of the British in the Patuxent and Potomac rivers, could not do otherwise than cause serious alarm at Baltimore, distant from Washington but 35 miles. The panic-struck inhabitants believed, that the british troops would march across the country, and attack them in the rear, while the squadron was cannonading them in front. The numbers of the British on shore were too small to warrant such an enterprise ; but, had it been risked, and had the fleet made a simultaneous movement up the bay, there is little doubt that Baltimore would have capitulated. Fortunately for the city, the military and naval forces within it were becoming hourly more powerful ; and, far from desponding, the generals and commodores used their utmost exertions, in strengthening the defences and improving the natural advantages of the position. Upon the hills to the eastward and northward of the city, a chain of pallisadoed redoubts, connected by breastworks, with ditches in front, and well supplied with artillery, was constructed ; and works were thrown up and guns mounted at every spot from which an invading force, either by land or water, could meet with annoyance. The Java frigate, of 60 guns, and two new sloops of war, of 22 guns each, the Erie and Ontario, were equipping at Baltimore. There were also in the harbour several gun-boats, armed each with a long french 36-pounder, besides a carronade ; as well as several private armed vessels. So that the Americans, including their field and regular battery guns, had an immense train of artillery to put in operation against an enemy. As to troops, exclusively of the 16300 militia, regulars, and flotilla-men, which general Winder had been authorized to assemble for the defence of the 10th military district, volunteers were

flocking in from Pennsylvania ; and the seamen and marines of commodore Rodgers, and captains Perry and Porter, had just arrived from the banks of the Potomac. ^{1814. Sept.}

If any southern town or city of the United States was an object of immediate attack, it certainly was Baltimore. The destruction of the new frigate and sloops, and of the immense quantities of naval stores, at that dépôt, would have been seriously felt by the american government. Yet were the british ships, that had on board the troops, waiting in the Patuxent, until the passing of the "approaching equinoctial new moon" should enable them to proceed, with safety, upon the "plans which had been concerted previously to the departure of the Iphigenia," or, in other words, upon the expedition to New-Orleans. On the 6th of September came a flag of truce from Baltimore ; and instantly all was bustle and alacrity on board the british squadron. The Royal-Oak 74 and troop-ships stood out of the Patuxent ; and vice-admiral Cochrane, quitting his anchorage off Tangier island, proceeded with the remainder of the fleet up the bay to North point, near the entrance of the Patapsco river. On the 10th and 11th the fleet anchored ; and, by noon on the 12th, the whole of the troops, marines of the fleet, black colonial marines, and seamen, numbering altogether 3270 rank and file, had disembarked at North point, in order to proceed to the immediate attack upon Baltimore by land ; while some frigates and sloops, the Erebus rocket-ship, and five bomb-vessels, ascended the Patapsco, to threaten and bombard Fort M'Henry, and the other contiguous batteries. The seamen, 600 in number, were under the orders of captain Edward Crofton, assisted by captains Thomas Ball Sullivan, Rowland Money, and Robert Ramsay, and the marines under captain John Robyns. ^{British expedition against the city. Troops and seamen land.}

Immediately after landing, the British moved forward to the city. On arriving at a line of intrenchments and abattis, thrown up between Black

1814. river and Humphries's creek on the Patapsco, and
 { distant about three miles from the point of landing,
 Sept. some opposition was expected; but the american
 General dragoons and riflemen, stationed there, fled without
 Ross firing a shot. At this time major-general Ross and
 and rear-adm. Cockburn, along with a guard of 50 or
 rear-adm. 60 men, were walking together, considerably ahead
 Cockburn of the advanced or light companies, in order to
 proceed in reconnoitre the enemy. At about 10 A. M., after
 advance. having proceeded about two miles from the intrench-
 ment, and some distance along a road flanked by
 thick woods, they encountered a division of ame-
 rican infantry, riflemen, cavalry, and artillery, num-
 bering about 370 men. A short skirmish ensued,
 and the Americans fell back; most of them taking
 to the woods. After saying to rear-admiral
 Cockburn, "I'll return and order up the light com-
 panies," major-general Ross proceeded to execute
 his purpose. In his way back, alone, by the same
 road along which he and his party had just passed,
 the major-general received a musket-bullet through
 his right arm into his breast, and fell mortally
 wounded. The firing had at this time wholly ceased;
 and the expiring general lay on the road, unheeded,
 because unseen, either by friend or foe, until the
 arrival at the spot of the light companies, who had
 hastened forward upon hearing the musketry. Leav-
 ing some attendants in charge of the lamented chief,
 the officer commanding rushed on; and it was then
 that rear-admiral Cockburn learned the loss which
 the army and the country had sustained.

General

British
 attack
 and
 defeat
 Ameri-
 cans at
 the
 meet-
 ing
 house.

As soon as the british main body, now under the
 command of colonel Brooke of the 44th regiment,
 closed upon the advance, the whole moved forward;
 and, at about two miles further, and about five from
 the city, came in sight of the american army, drawn
 up, with six pieces of artillery, and a body of
 cavalry, numbering in the whole about 4500 men;
 and backed, in case of a retreat, by at least 8000
 more, and these hourly augmenting, and by heavy

batteries in all directions. As the British advanced to the attack, the Americans opened a fire of musketry from their whole line and a heavy cannonade from their field-pieces, and then retreated to a wood in the rear. From this position the Americans were quickly expelled, chiefly by the bayonet, leaving all their wounded and two of their guns in the possession of the British. The latter, however, were too much fatigued to follow up their victory on that evening.

1814.
Sept.

The british loss amounted to one general-staff, one subaltern, two sergeants, and 35 rank and file killed, seven captains, four subalterns, 11 sergeants, and 229 rank and file wounded, of the army. The navy lost one captain's clerk, (Arthur Edmondson,) five seamen, and one marine killed, one captain of marines, (John Robyns,) one lieutenant, (Sampson Marshall, severely) one midshipman, (Charles Ogle,) 30 seamen, and 15 marines wounded; making the total loss of the British on shore amount to 46 killed, and 300 wounded. The great disproportion of wounded arose from the employment, by the enemy, of buck-shot; and the magnitude of the loss, altogether, to the enemy's sheltered position. The loss of the Americans upon the field, according to their own account, was 20 killed, 90 wounded, and 47 missing. The last item is evidently erroneous, as the british commanding officer carried away with him about 200 prisoners.

Loss on
each
side.

Early on the morning of the 13th, leaving a small guard at a meeting-house, from which the enemy had been driven, to protect the wounded, colonel Brooke moved forward with the army, and at 10 A. M. occupied a favourable position, about two miles to the eastward of Baltimore. From this point, the strong defences in and around the city were plainly visible; and arrangements were made for storming, during the ensuing night, with the cooperation of the fleet, the american entrenched camp; at which lay general Stricker and his army, now reinforced by Douglas's

 Sept.

Ships
ground
in Pa-
tapsco.

In their way up the Patapsco, several of the frigates and other vessels had grounded; and one or two of the frigates did not get off until the next day. On the 13th, at about 9 P. M., the Meteor, Ætna, Terror, Volcano, and Devastation, bomb-vessels, captains Samuel Roberts, Richard Kenah, John Sheridan, David Price, and Thomas Alexander, and the Erebus, rocket-ship, captain David Ewen Bartholomew, came to anchor in a position, from which they could act upon the enemy's fort and batteries, the frigates having already taken their stations outside of all. On the 13th, at daylight, the bombardment commenced upon, and was returned by, Fort M'Henry, the Star Fort, and the water batteries on both sides of the entrance. At about 3 P. M. the four bomb-vessels and rocket-ship weighed, and stood further in; the latter, to give effect to her rockets, much nearer than the others. The forts, which had discontinued their fire on account of the vessels being out of range, now recommenced a brisk cannonade; but which, although persevered in for some hours, did not injure a man on board any of the vessels: two of the bombs only were slightly struck. The close position of the Erebus led the commander in chief, whose ship, the Severn, with the other frigates, was at anchor in the river, to imagine that captain Bartholomew could not maintain his position. The vice-admiral, therefore, sent a division of boats to tow out the Erebus.

Bom-
bard-
ment
com-
mences

Criti-
cal si-
tuation
of boats
detach-
ed up
the
Ferry
branch
as a
diver-
sion.

On the 13th, in the middle of the night, a division of 20 boats was detached up the Ferry branch, to cause a diversion favourable to the intended assault upon the enemy's entrenched camp at the opposite side of the city. The rain poured in torrents, and the night was so extremely dark, that 11 of the boats pulled, by mistake, directly for the harbour. Fortunately, the lights of the city discovered to the crews their perilous situation, in time for them to

get back in safety to their ships. The remaining nine boats, consisting of one rocket-boat, five launches, two pinnaces, and one gig, containing 128 officers, seamen, and marines, under the command of captain Charles Napier, passed up the Ferry branch to a considerable distance above Fort M'Henry, and opened a heavy fire of rockets and shot upon the shore; at several parts of which they could have landed with ease, had the whole of their force been together. After having, by drawing down a considerable number of troops to the beach, effected their object, the British stood back with their boats. When just opposite to Fort M'Henry, one of the officers caused a rocket to be fired. The consequence was, an immediate discharge of round, grape, and canister, from the fort and water batteries below; by which one of the boats was slightly struck, and a man mortally wounded. Not another casualty occurred.

It appears that, on the evening of the 13th, after the boats had been ordered upon this service, vice-admiral Cochrane sent a messenger to acquaint colonel Brooke, that, as the entrance to Baltimore by sea was entirely obstructed by a barrier of vessels, sunk at the mouth of the harbour, defended inside by gun-boats, a naval cooperation against the city and entrenched camp was found impracticable. The heavy rain, at this time falling, greatly increased the difficulty of ascending the steep hill, upon which the camp was situated; and both commanders concurred in the propriety of immediately withdrawing the troops and ships. On the 14th, at 1 h. 30 m. A. M., the British troops commenced retiring, and halted at three miles distance. In the course of the evening they retired three miles further, and encamped for the night. Late on the morning of the 15th, they moved down to North point; and, in the course of that day, reembarked, without having experienced, during their slow and deliberate retreat, the slightest molestation from the enemy. Since 7 A. M. on the

1814.
Sept.

Abandonment of the expedition and reembarkation of the troops, &c.

1814. preceding day, the rocket-ship and bomb-vessels had
 Sept. been called off from the american batteries; which, notwithstanding the long continued bombardment, lost only four men killed and 24 wounded. The ships afterwards stood down the river, and joined the remainder of the squadron at anchor off North point.

Re- marks on the subject. No Briton but must regret, that any plan of "ulterior operations" should have obtruded itself, to check the progress of the attack. With respect to naval cooperation, it is well known, that the gallant commanders of the *Severn*, *Euryalus*, *Havannah*, and *Hebrus* frigates, volunteered to lighten their ships, and lay them close alongside Fort M'Henry. The possession of this fort would have enabled the British to silence the batteries on the opposite side of the bay, and, indeed, have placed the city completely at their mercy. The very advance of the frigates to their stations would probably have led to the destruction of the *Java*, *Erie* and *Ontario*; and then the British might have retired, "holding in view the ulterior operations of the troops," with something more to boast of than, not merely an empty, but, considering what had been lost by it, a highly disastrous, "demonstration."

Boat-attack up the Coan and death of capt. Kenah. On the 19th of September sir Alexander Cochrane, with the *Tonnant* and *Surprise* frigate, sailed for Halifax, to hasten the construction of the flat-bottomed boats, intended to be employed in the great expedition on foot; and on the same day, the *Albion*, rear-admiral Cockburn, sailed for Bermuda, leaving the *Royal-Oak* 74, rear-admiral Pulteney Malcolm, with some frigates and smaller vessels, and the ships containing the troops, at anchor in the river Patuxent. On the 27th the rear-admiral removed to the *Potomac*; where, on the 3d of October, the troops were placed into boats, and sent up Coan river. In their way up, two soldiers were wounded, and captain Kenah of the *Ætna*, a gallant young officer, killed, by musketry from the shore. Against so powerful a force, when once landed, the few militia could not be

expected to stand: they fired a volley and fled, and the troops advanced past Northumberland court-^{1814.}house, five miles into the interior. After taking and scuttling two or three worthless schooners, and, according to the american editors, plundering the inhabitants, the troops reembarked, and stood down the river to their ships. The latter soon afterwards descended the Potomac; and on the 14th, taking with him the Royal-Oak, Asia, and Ramillies 74s, one or two frigates, and all the troop-ships and bombs, rear-admiral Malcolm quitted the Chesapeake for the grand rendezvous at Negril bay, Jamaica.

In our account of the last year's proceedings before the blockaded port of New-London, we related the disgraceful attempt made to destroy the british 74-gun ship Ramillies, and her crew of 590 or 600 men, by an explosion-vessel fitted out at New-York.* We remember frequently hearing it said, that the plan originated with "mercenary merchants;" and it was even hinted, that the projectors were adopted, not native, Americans, the latter being, too "high-minded" to countenance such a proceeding. Above all things, no one, who wished to escape a tar-and-feathering, dare have whispered a supposition, that an american naval officer would lend his ear to so dishonourable a mode of freeing himself from the presence of his enemy. Those, the most ready to fly out on these occasions, did not of course recollect the attempt made in the bay of Chesapeake, with the sanction, if not under the direction, of captain Charles Stewart of the american navy, to blow up the Plantagenet 74, by a torpedo conducted by Mr. Mervine P. Mix, one of the Constellation's midshipmen; nor of a second plan to blow up the Ramillies, projected by that "excellent man," that "ornament to his country,"† commodore Stephen Decatur, but of which, very fortunately, sir Thomas Hardy received intelligence in time to place him on his guard. Nay, an officer and boat's

* See p. 349.

† Brenton, vol. v. pp. 61, 202.

1814. crew from the Ramillies actually succeeded in capturing one of the crew of the frigate United-States, who was to conduct the whale-boat containing the torpedo, and which whale-boat lay for several weeks, waiting a fit opportunity to push off, at Southold on Long island.

The british force at anchor off New-London in January, 1814, consisted, besides the Ramillies, of the 24-pounder 40-gun frigate Endymion, captain Henry Hope, and the 38-gun frigate Statira, captain Hassard Stackpoole. In the hearing of an american privateer-captain, named Moran, about to quit the Ramillies for the shore, captains Hope and Stackpoole happened to express a desire to meet the United-States and Macedonian. This soon became known all over New-London. Feeling his consequence likely to be lowered in the opinion of the citizens, commodore Decatur resolved to put in immediate practice an epistolary stratagem; which, managed as he intended it should be, could not fail to redound to his advantage. On the 14th of January, making the subject of the above reported conversation the ground of the application, the american commodore sent to captain Hardy a written proposition for a contest between the United-States, of "48 guns and a boat-gun," and the Endymion, of "50 guns," and between the Macedonian, of "47," and the Statira, of "50 guns." Captain Hardy readily consented that the Statira should meet the Macedonian, as they were sister-ships; but, quite contrary, as may be supposed, to the wishes of captain Hope, he refused to permit the Endymion to meet the United-States, because the latter was much the superior in force.

Sends
a chal-
lenge
to sir
Thos.
Hardy.

Sir
Thos.
con-
sents
that
Statira
may
meet
Macedonian.

Through the medium of captain Biddle, the bearer of his proposition, commodore Decatur had agreed, that the crews of the Endymion and Statira, both of which were short of complement, should be made up from the Ramillies and Borer; and, had it been finally settled that the meeting should take

place between the Macedonian and Statira, sir Thomas Hardy meant, as we have understood, to include himself among the volunteers from the Ramillies to serve on board the latter. This would, undoubtedly, have been a very hard measure upon captain Stackpoole; but we do not see how sir Thomas Hardy, having consented that a ship, other than the one he commanded, should meet in single combat the ship of an enemy, could well have acted otherwise.

1814.

Meant

him-
self.

When commodore Decatur wrote his letter about capturing the Macedonian, he did not mention, although he took care to reckon, that ship's boat-gun; but now he tells us, that the 49th gun of the United-States is a "12-pound carronade, a boat-gun." We have already shown, that the reduction of that ship's force did not go quite the length it purported to go, and that the Macedonian, although she may have mounted but 47 guns, was more effectively armed than when she mounted 49.* The armament of each of the two british ships is easily stated. Until the latter end of the year 1812, when she went into dock at Plymouth, the Endymion mounted, along with her 26 long 24-pounders on the main deck, 14 carronades, 32-pounders, on the quarterdeck, and four of the same caliber and two long nines on the forecastle; total, 46 guns. In May, 1813, the Endymion had her quarterdeck barricade continued a few feet farther forward, to admit an additional carronade of a side; which, with two additional carronades on the fore-castle, and, in lieu of her two 9-pounders, a brass long french 18-pounder as a bow chase-gun and for which there was no broadside-port, gave the Endymion 49 guns. Her net complement consisted of 347 men and boys. The Statira mounted the 46 guns of her class, and two light boat-guns, with a net complement (when filled) of 317 men and boys. The crew of the United-States was about 480, and the crew of the Macedonian from 430 to 440 men.

* See p. 346.

1814. Commodore Decatur, however, declined a meeting between the Macedonian and Statira, from the alleged apprehension, that the latter might be overmanned; thereby tacitly admitting, what went rather against the previous claims of himself and his brother conquerors, that three men were better than two. Thus ended this vapouring affair. Commodore Decatur then sent the correspondence to a newspaper-editor; and he and captain Jacob Jones were bepraised on all sides for the valour they had displayed. According to one of the swaggering statements made on the occasion, captain Jones harangued his men, and pretended to lament the loss of so fine a ship as the Statira; which, he assured them, would have been their prize in a very short time. He had also the hardihood to tell them, that it was all owing to the refusal of the British, who were "afraid to contend with Americans upon equal terms."

Shortly after this business was broken off, a verbal challenge passed between the commanders of the Hornet and Loup-Cervier, the late american Wasp. The latter vessel soon afterwards foundered at sea, and every soul on board perished: nothing respecting this challenge has therefore been made public on the british side. The american "Port-folio," for November, 1815, in which the "Life of captain James Biddle" is given, contains some account of it. It is there stated, that "captain (William Bowen) Mends, of the Loup-Cervier, said that, if captain Biddle would inform him of the number of souls he commanded, he, captain Mends, pledged his honour to limit his number to the same; but that commodore Decatur would not permit captain Biddle to acquaint captain Mends with the number of his crew, and meet him on the terms stated; because it was understood that, in that case, the Loup-Cervier would have a picked crew from the british squadron." What do we gather from this? Why, that the Americans, with all picked men on their side, were afraid to meet an equal number of British, because

Cervier

they *might have* picked men on theirs. Commodore Decatur's amended proposition was: "The Hornet shall meet the Loup-Cervier, under a mutual and satisfactory pledge, that neither ship shall receive any additional officers or men, but shall go into action with their original crews respectively." Was this fair? The Hornet's "original crew" was 170, including about three boys; the Loup-Cervier's original crew 121, including 18 boys. So that, deducting the boys, the numbers would stand: Americans 167, British 103.

The blockade of the american ships in New-London having continued until the season had passed, in which commodore Decatur could hope to effect his escape, the United-States and Macedonian were moved up the river, to the head of navigation for heavy vessels, and there dismantled; and, while captain Jones and the late crew of the Macedonian proceeded to reinforce the squadron under commodore Chauncey on Lake Ontario, commodore Decatur and his ship's company passed into the President, then at anchor in New-York, her late distinguished commander and his crew having been transferred to the new 44-gun frigate Guerrière, fitting for sea at Philadelphia, and armed on the main deck with 30 medium 32-pounders.

On the 7th of April, in the evening, captain the honourable Thomas Bladen Capel, of the 74-gun ship Hogue, commanding a small british squadron, consisting, besides that ship, of the Endymion and Maidstone frigates, and 14-gun brig-sloop Borer, captain Richard Coote, despatched six boats, containing 136 men, under the orders of captain Coote, assisted by lieutenant Harry Pyne, and lieutenant of marines Walter Griffith Lloyd, to attempt the capture or destruction of some american vessels near Pettipague point, about 15 miles up Connecticut river. On the 8th captain Coote and his party reached the point, and, after a slight skirmish with some militia, destroyed all the vessels, 27 in number,

Three of the vessels were large privateers, completely equipped and ready for sea; and the aggregate burden of the 27 was upwards of 5000 tons. In the evening, after dark, the boats dropped down the river, without rowing; and the British reached their ships with no greater loss than two men killed and two wounded. For this gallant and important exploit, captain Coote obtained post-rank, and lieutenant Pyne his commission as commander.

His ex-
cellent
plan
for en-
suring
a safe
return
to the
boats.

On the 14th of June captain the honourable Charles Paget, of the british 74-gun ship *Superb*, detached, under the orders of lieutenant James Garland, all that ship's boats, and two boats from the 18-gun brig-sloop *Nimrod*, captain George Hilton, to endeavour to destroy some newly-built ships and other vessels at a place called Wareham, at the head of Buzzard's bay in the state of Connecticut. Lieutenant Garland completely succeeded in his object, without incurring the slightest loss, and destroyed as many ships, brigs, schooners, and sloops, on the stocks and afloat, as measured in the aggregate 2522 tons; also a large cotton manufactory, with its contents, valued at half a million of dollars. The extreme intricacy of the navigation rendered it too hazardous to attempt the enterprise without the assistance of daylight. This, however, would necessarily expose the boats, upon their return down the narrow stream, to a fire of musketry from a numerous militia, which, on the first alarm, had collected from the vicinity. But the foresight and prompt resolution of lieutenant Garland completely succeeded in obviating the danger that was thus to be apprehended; for, as soon as he had destroyed the vessels and cotton manufactory, he ascertained who were the principal people of the place, and then secured them as hostages for a truce, until the boats were conducted back out of the reach of difficulty. This produced

the desired effect, and the hostages were relanded ^{1814.} at the first convenient spot.

We have already stated that the american frigate Congress was laid up, and have assigned a reason for her having been so. The only remaining 18-pounder frigate belonging to the United States, except the Macedonian in the mud of New-London river, was the Constellation at Norfolk. In the latter end of the year 1813, captain Stewart was relieved in the command of that frigate by captain Charles Gordon, and was promoted to the Constitution; which ship had been in a manner rebuilt, and was lying in President road, Boston, ready for sea.

Capt.
Stew-
art ap-
pointed
to the
Consti-
tution.

It appears that this american frigate now mounted a pair of carronades fewer than she did in the Java's action.* But the Constitution had not left either that pair or the pair of which she had previously disarmed herself, on shore, but had transferred them to the hold; so that, as she had the ports for them, they could be remounted in a very few minutes. To compensate for this slight reduction in her armament, the Constitution had taken on board a furnace for heating shot. Her officers stated, that it would heat shot to a white heat in 15 minutes, but that "hot shot were not to be used in action, unless the ship was assailed by a superior force." What an american captain would pronounce "superior force" may be partly imagined by the numerous american descriptions of "equal force" to be found in these pages. Upon her capstan the Constitution now mounted a piece resembling seven musket-barrels, fixed together with iron bands. It was discharged by one lock; and each barrel threw 25 balls, making 175 shot from the piece within the space of two minutes. What could have impelled the Americans to invent such extraordinary implements of war, but fear, downright fear?

Her
new
arma-
ment,
&c.

Numerically, the Constitution was well manned, having a crew of 480, including three boys; but all the best hands out of her first crew had been draughted to the ships on the lakes, except a few

* See pp. 140, 185.

1814. sent on board the Chesapeake. The ship had
 Feb. now, therefore, what the Americans would call
 State of a bad crew, but what a british captain, judging
 her from their personal appearance, would consider
 crew. a tolerably fine ship's company. To give the men
 increased confidence in case of being boarded, they
 were provided with leather caps, fitted with narrow
 plates of iron, crossing at the top, and bending
 upward from the lower edge of the crown, to prevent
 a blow from striking the shoulder after having glanced
 on the head. Another strong symptom of fear; all
 the effect of the exertions making by the British, to
 meet the Americans on terms not quite so unequal
 as had been the case in nearly every action in which
 the latter had come off victorious.

Consti- On the 1st of January, 1814, after having
 tution suffered herself to be blockaded, for several weeks,
 sails by the 38-gun frigate Nymphé, captain Farmery
 from Predam Epworth, the Constitution escaped to sea
 Boston unperceived from President road. On the 14th
 and falls in with
 with Pique. of February, to-windward of Barbadoes, captain
 Stewart captured and destroyed the british 14-gun
 schooner Pictou; and on the 23d, when running
 through the Mona passage on her way homewards,
 the Constitution fell in with the british 18-pounder
 36-gun frigate Pique, captain the honourable Anthony
 Maitland. The Pique (late french Pallas*) was a
 remarkably fine frigate of her class, measuring 1029
 tons, and mounted, along with her 26 long 18-pound-
 ers on the main deck, 16 carronades, 32-pounders,
 and four long nines on her quarterdeck and fore-
 castle, total 46 guns, with an established complement
 of 284 men and boys.

When, at about noon, they first discovered each
 other, the two ships were steering to the north-west,
 with a light wind right aft. The Pique immediately
 braced her yards by, to allow the stranger, who was
 astern under a crowd of sail, to come up. At 4 h.
 30 m. P.M. the Constitution took in her studding-sails.
 Observing this, the Pique hauled to the wind on the

* See vol. iii. p. 46.

larboard tack, and, hoisting her colours, made all sail to close. Almost immediately afterwards, and when bearing from the Pique south-east by south distant three miles, the Constitution took a reef in her topsails, hoisted her colours, and hauled to the wind on the starboard tack. The island of Zachee at this time bore from the Pique north by east distant 12 or 13 miles. The change of position of each ship afforded to the other a tolerable idea of the force which would be opposed to her. The Constitution counted 13 ports and a bridle on the Pique's main deck, and saw at once that she was of a class inferior to the Guerrière and Java; and the Pique counted 15 ports and a bridle on the Constitution's main deck, and therefore knew as well that she was one of the large class of american frigates.

1814.
Feb.
Constitution shortens sail, and Pique hauls up to close her.

We formerly noticed the directions given by the british admiralty, that the 18-pounder frigates were not to seek an engagement with the american 44-gun frigates. A prohibitory order of this kind was in the possession of captain Maitland; but was of course unknown to his crew. He had the good fortune to command one of the finest ship's companies in the british navy; and, as a proof how much british seamen had been "cowed by the successes of the Americans," the Pique's men, on observing that it was not captain Maitland's intention to become the assailant, went aft and requested him to bring the american frigate to action. Captain Maitland could do no less than read to them the instructions he had received, but entirely failed in persuading the Pique's crew, that there had been any necessity for issuing them. Either just before, or just after, the reading of the captain's orders, the crew refused to take their supper-time grog; alleging as a reason, that they did not want "dutch courage to fight a yankee frigate." Although it is true, that the Constitution was by no means so well manned as when she took the Java or Guerrière, and that the Pique had about 260 men, who, upon an average, were not more than 26 years of age, and the major part of them good seamen, yet

Pique ordered not to engage an american 44.

Anecdote of the Pique's crew.

1814. the numerical disproportion was too great; and it was well that captain Stewart thought the Pique's 18s were 24s and, therefore did not make an effort to bring her to action.

The two frigates separate. At 8 p. m., owing to thick squally weather, during which the wind shifted to the east-north-east, the two frigates lost sight of each other. At 2 a. m. on the 24th the Pique tacked to the south-east, and, crossing the bows of the Constitution, again discovered her, at the distance of about two miles on her lee beam. As each stood on her course, the Pique to the south-east, and the Constitution to the north by west, the two ships, by 3 a. m., had run each other quite out of sight. Those who have gone along with us thus far, in unravelling the american accounts, and exposing the little peccadilloes of the writers, professional and non-professional, will feel no surprise at being told, that captain Stewart declared to his government, and through that channel to the public, that he had chased a british frigate, but that she had escaped from him in the dark.

Junon and Tenedos chase Constitution into Marblehead. On the 3d of April, at 7 a. m., having arrived off the port of Marblehead, in the state of Massachusetts, the Constitution fell in with the two british 38-gun frigates Junon, captain Clotworthy Upton, and Tenedos, captain Hyde Parker. The american frigate was standing to the westward, with the wind about north by west, and bore from the two english frigates about north-west by west. The Junon and Tenedos quickly hauled up in chase, and the Constitution crowded sail in the direction of Marblehead. At 9 h. 30 m., finding the Tenedos rather gaining upon her, the Constitution started her water, and threw overboard a quantity of provisions, spars, and other articles. At 11 h. 30 m. she hoisted her colours, and the two british frigates, who were now rather dropping in the chase, did the same. At 1 h. 30 m. p. m. the Constitution came to an anchor in the harbour of Marblehead. Captain Parker, whose ship now bore from Cape Ann north-north-east distant nine miles, was anxious to follow the american

Constitution eventually reaches Boston

frigate into the port, which had no defences ; but ^{1814.} the Tenedos was recalled by signal from the Junon. ^{Aug.} A shift of wind to the south-east enabled the Constitution, at 6 P. M., to remove to Salem ; where she lay much more secure. A short time afterwards the american frigate found an opportunity of quitting Salem unperceived, and anchored in the harbour of Boston.

On the 26th of August an expedition, under the joint command of lieutenant-general sir John Coape Sherbrooke, governor of the province, and rear-admiral Edward Griffith, consisting of the 74-gun ship Dragon, captain Robert Barrie, frigates Endymion and Bacchante, captains Henry Hope and Francis Stanfell, 18-gun ship-sloop Sylph, captain George Dickens, and 10 sail of transports with troops, sailed from Halifax, Nova-Scotia, bound to the river Penobscot, near the north-eastern extremity of the coast of the United States. On the 31st, when off the Metinicus islands, the expedition was joined by the 74-gun ship Bulwark, captain Farmery Predam Epworth, frigate Tenedos, captain Hyde Parker, and brig-sloops Rifleman and Peruvian, captains Joseph Pearce and George Kippen. From the Rifleman intelligence was now received, that the United States' ship Adams, of 26 guns, captain Charles Morris, had a few days before put into Penobscot, and, not deeming herself safe at the entrance of the river, had proceeded to Hamden, a place situated 27 miles higher up ; where she had landed her guns and placed them in battery for her protection. The original plan of making Machias on the main coast the first point of attack, was now deviated from, and the general and admiral determined to ascend the river and endeavour to capture or destroy the Adams.

Towards evening the fleet, led by the Tenedos, made sail up the Penobscot with a fair wind, and by daylight on the 1st of September was off the fort and town of Castine. At 8 A. M. the men of war and transports came to anchor ; and, after a slight

1814. show of resistance, Castine surrendered. The service of capturing or destroying the Adams frigate and the batteries erected for her defence was now intrusted to captain Barrie; who, at 6 p. m., taking with him the Peruvian and Sylph sloops, a tender belonging to the Dragon commanded by acting lieutenant James Pearson, and the Harmony transport, commanded, on this occasion, by lieutenant William Henry Woodin, containing between them about 600 troops under lieutenant-colonel Henry John, proceeded with the utmost despatch up the Penobscot. Light variable winds, thick foggy weather, and a most intricate channel of which the British were entirely ignorant, made it 2 p. m. on the 2d before the Peruvian and her consorts arrived off Frankfort. At 5 p. m., having arrived off Ball's head cone, distant about five miles from Hamden, colonel John and captain Barrie landed to reconnoitre; and by 10 p. m. the whole of the troops were also landed. The troops bivouacked for the night amidst an incessant rain; and at 6 a. m. on the 3d the little party began their march towards Hamden. The larger vessels were kept in the rear in reserve; while the boats, commanded by lieutenant George Pedlar first of the Dragon, assisted by lieutenant the honourable George James Perceval, of the Tenedos, and lieutenant Francis Ormond, of the Endymion, and preceded, at the distance of about a quarter of a mile, by a rocket-boat under the immediate direction of captain Barrie himself, advanced in line with the right flank of the army.

American and British forces opposed. The American militia and crew of the Adams, to the number altogether, as reported, of 1400 men, had taken up a most excellent position on a high hill fronting the town of Hamden, with some field-pieces stationed in the woods on their right. About a quarter of a mile to the southward of the Adams frigate, and calculated to command both the highway by which the troops were advancing and the river, were mounted eight 18-pounders; and 15 more 18-pounders were mounted on a wharf close to

the Adams, completely commanding the river, which at that spot was only 600 yards wide. The british force consisted, besides the 600 infantry and artillery under lieutenant-colonel John, of 80 marines under captain Thomas Carter of the Dragon, and about as many seamen under lieutenants James Symonds, Samuel Mottley, and Henry Slade, all of the Bulwark, and Mr. John Spurling, that ship's master.

The moment the british boats arrived within gun-shot, the Americans opened a fire upon them both from the hill and the wharf. This fire was warmly returned, and the rockets evidently threw the enemy into confusion. In the mean time the troops, marines, and seamen had stormed the hill with the utmost gallantry, and the american militia were in full retreat on the road to Bangor. Before the boats could get within grape-shot distance, captain Morris, finding himself deserted by those who, doubtless, had, a few minutes before, promised to perform wonders, set fire to the Adams. The american militia made so good use of their legs, that very few were taken prisoners. The only loss sustained on the part of the British was one seaman killed, captain Gall, of the 29th, and seven privates wounded, and one rank and file missing. Two ships, one of them armed, were destroyed by the Americans at the same time as the Adams. The British immediately hastened on to Bangor, which also surrendered; and there one ship, one brig, three schooners, and a sloop were destroyed. A copper-bottomed brig, pierced for 18 guns, and the Decatur privateer, of 16 guns, were captured, but lost in descending the river. Several vessels, at the different towns on the banks of the river, were found on the stocks, but were all left untouched.

The Adams had been a 32-gun frigate, but was afterwards lengthened, so as to rate as a 36; and then, on account of some defect in her construction, was cut down to a corvette. She measured 725

1814. tons american, or about 783 english. The Adams
 April. sailed upon her last cruise with an armament of four long 18-pounders, 20 columbiad, or medium guns of the same caliber, and two long 12-pounders, total 26 guns, and with a complement, according to a prisoner who was some weeks on board of her, of 248 picked seamen, chiefly masters and mates of merchantmen. The Adams, therefore, was one of the most formidable "corvettes" that cruised on the ocean. While in the Irish channel, towards the end of July, she was chased by the 18-pounder 36-gun frigate Tigris, captain Robert Henderson, and would probably have been caught, had not captain Morris thrown overboard his quarter guns and a portion of his stores. Captain Brenton confounds the Adams with the "John-Adams," and gives the ship only "20 guns."*

State of
 british
 force
 on
 Lake
 Onta-
 rio.

As at the close of the preceding year, the military and naval commanders in chief, upon the canadian frontier of the United States, were lieutenant-general sir George Prevost and commodore sir James Lucas Yeo. On the 15th of April were launched at Kingston, Lake Ontario, the british ships Prince-Regent and Princess-Charlotte. The first measured 1310 tons, and mounted 28 long 24-pounders on the main deck, four long 24-pounders, four carronades, 68-pounders, and 22 carronades, 32-pounders, on the upper or spar deck, total 58 guns, with a complement of 485 men and boys. The last-named ship measured 815 tons, and mounted 24 long† 24s on the main deck, and two more, along with fourteen 32 and two 68 pounder carronades on the quarterdeck and forecastle, total 42 guns, with a complement of 315 men and boys. The six 68-pounder carronades were the same mounted in the preceding year on board the Wolfe and Royal-George. The latter, now named the Niagara, had replaced the two 68s with two long 18-pounders; the former,

* Brenton, vol. v. p. 171. † Doubtful if not medium.

now the Montreal, her four, with the same number of 32-pounder carronades. The schooners Moira and Sidney-Smith had been altered into brigs, and their names changed to the Charwell and Magnet; as had been the names of the Melville and Beresford to the Star and Netley; but, it is believed, no alterations, beyond those already mentioned, were made in the armaments of any of the british vessels.

1814.
May.

Before the end of March, commodore Chauncey had succeeded in equipping two large brig-sloops, the Jones and Jefferson, each, as acknowledged, of 500 tons american, and therefore of at least 530 tons english. It has been stated, that these brigs carried 42-pounder carronades, and mounted 24 guns each; but they will be considered as having mounted the same as the ships Frolic and Peacock, with the addition of a long 24-pounder upon a traversing carriage. The Sylph, now a brig, mounted, in lieu of her former armament, 14 carronades, 24-pounders, and two long 12s. On the 1st of May, was launched at Sackett's-Harbour, the Superior, of about 1580 tons, mounting 30 columbiad or medium 32-pounders on the lower or main deck, two long 24s, and 30 carronades, 42-pounders, on the upper or spar deck, total 62 guns, with a complement of 550 men.

Same
of ame-
rican
force.

Oswego is situated on the river of the same name, near its confluence with Lake Ontario, and is distant from Sackett's-Harbour about 60 miles. At the mouth of the river there is a safe harbour, with two fathoms' water; the channel to which is completely commanded by a well-built fort, standing, along with the state warehouses, barracks, and a few houses, upon a commanding height on the eastern shore of the river, having its front towards the lake. On the western bank of the river stands the town, consisting of about 30 houses. As this river afforded the only water communication between New-York and Sackett's-Harbour, the accumulation of naval stores in the warehouses of Oswego is readily explained,

British
expedi-
tion to
the Os-
wego.

1814. and gave to the post an importance which it would
 May. not otherwise possess. On the 3d of May, in the evening, a detachment of troops, numbering altogether 1080 rank and file, embarked in the vessels of sir James Yeo's fleet, lying at Kingston; and, early on the following morning, lieutenant-general Dummond went on board the Prince-Regent, as commander of the troops. The squadron, consisting of the Prince-Regent, captain Richard James Lawrence O'Connor, bearing the broad pendant of sir James Yeo, Princess-Charlotte, captain William Howe Mulcaster, Montreal, captain Stephen Popham, Niagara, captain Francis Brockell Spilsbury, Charwell, captain Alexander Dobbs, Star, captain Charles Anthony, and Magnet, captain Henry Collier, immediately stood out of the harbour; but, on account of light and variable winds, did not arrive off Oswego until noon on the following day.

Defensive preparations by the Americans. Either suspicion, or direct information, of the attack had led to preparations on the part of the Americans. Since the 30th of April lieutenant-colonel Mitchell had arrived from Sackett's-Harbour, with 300 heavy and light artillery, and several engineer and artillery officers. The batteries were repaired and fresh picketed, and new platforms laid for the guns; which were four in number, 24, 12, and 6 pounders; besides a 12-pounder, planted *en barbette* close to the lake-shore. The United States' schooner Growler, of three heavy guns, lieutenant George Pearce, was lying in the harbour, preparing, under the superintendence of captain Woolsey, to conduct to Sackett's-Harbour a division of batteaux laden with stores. Arrangements had also been made for assembling the militia of the district; and, no sooner did the british squadron show itself at 6 A.M. on the 5th, than alarm guns were fired, which soon brought to the post upwards of 200 militia; thus making a total force of at least 540 men. By way, also, of making this force appear treble what it was, in the hope thereby to daunt

the British, and prevent them from attempting to land, the Americans pitched all their tents upon the opposite, or town side of the river, while they themselves remained in their barracks.

At 3 P. M. the ships lay to within long range of the shore; and the gun-boats, 11 in number, were sent in, under the orders of captain Collier, to induce the enemy to show the number and position of his guns. At 4 P. M., by which time the gun-boats had got within point-blank range, the Americans opened their fire, and a mutual cannonade was kept up until 5 h. 30 m. P. M.; when, having effected his object, captain Collier stood back to the fleet. Preparations were now made for disembarking the troops on that evening, but, about sunset, a heavy gale from the north-west compelled the ships to gain an offing; in which effort, four of the boats, their crews being first taken out, were obliged to be cut adrift. As soon as the weather moderated, the squadron cast anchor about 10 miles to the northward of the fort.

On the 6th, in the morning, the ships having returned and every thing being ready, a division of about 770 men, including 200 seamen, armed with pikes, under captain Mulcaster, embarked in the boats. Owing to the shoalness of the water off the harbour, the Prince-Regent and Princess-Charlotte could not approach near enough to cannonade the battery with any effect; but this service was most gallantly performed by the Montreal and Niagara, under a heavy discharge of red-hot shot, which set the Montreal on fire three times. The Magnet took her station in front of the town, on the opposite side of the river; while the Star and Charwell towed in and covered the boats, containing the troops. The wind was at this time nearly ahead; and the consequent tardiness in the approach of the boats exposed the men to a heavy and destructive fire from the enemy's batteries, and from upwards of 500 regulars and militia, drawn up on the brow of

1814. the hill. The British, nevertheless, effected their landing, and instantly formed on the beach. Having to ascend a steep and long hill, the troops suffered extremely from the enemy's fire. No sooner, however, had they reached the summit, than the 300 american regulars retired to the rear of the fort, and the 200 american militia fled, helter-skelter, into the woods. In 10 minutes after the British had gained the height, the fort was in their possession. Lieutenant James Laurie, of the marines, was the first man who entered it; and lieutenant John Hewett, of the same corps, climbed the flag-staff, under a heavy fire, and struck the american colours, which had been nailed to the mast; more, as it would seem, to give trouble to the British, than to evince a determination, on the part of the Americans, of defending the post with any unusual obstinacy.

Retreat

Hewett

Loss on
each
side.

The British loss in the affair of Oswego was rather severe. It amounted to one captain of marines, (William Holtoway,) and 14 non-commissioned officers and privates of the royal marines and De Watteville's regiment, and three seamen killed, one captain and one subaltern of De Watteville's, two captains, (William Howe Mulcaster, dangerously, and Stephen Popham,) one lieutenant, (Charles William Griffith Griffin,) and one master of the navy, (— Richardson,) 51 non-commissioned officers and privates of the royal marines and De Watteville's, and seven seamen wounded, total, 18 killed and 64 wounded. The Americans stated their loss at one lieutenant and five men killed, 38 wounded, and 25 missing. The British captured 60 prisoners.

Stores,
&c.
carried
away
and de-
stroyed
by the
British

The British carried away with them seven long guns, 32 and 24 pounders, a great quantity of ordnance stores, and large rope, 2400 barrels of provisions, and three schooners. They destroyed three long 24-pounder guns, one long 12, and two long 6s, a schooner, the barracks, and all the other public buildings. One of the schooners

was the Growler, late Hamilton. Besides the above, ^{1814.}
a quantity of cordage, and other naval stores, and ^{May.}
three long 32-pounders, were sunk in the river by
the Americans themselves. The guns and stores
for the new ship Superior, had, unknown to the
British, been removed from Oswego previously to
the attack; and reached Sackett's-Harbour, chiefly
by land conveyance. After departing from Oswego,
sir James anchored off Sackett's-Harbour, and
blockaded a port which sir George Prevost, with
a portion of the large force then concentrated around
him at his "camp of instruction" at Chambly, ought
to have enabled him to attack.

By the capture of a boat from Oswego, containing
two long 24-pounders and a 19½ inch cable for the
Superior, sir James became apprized that 18 other
boats, similarly laden, were waiting at Sandy creek
for an opportunity of reaching Sackett's-Harbour.
He accordingly detached captains Popham and Spils-
bury, with 180 seamen and marines, to endeavour to cut
out the vessels. On the 30th of May, shortly after day-
light, the two captains arrived at and began ascending
the creek; and, when within a quarter of a mile of the
enemy, lieutenant Thomas S. Cox, with the principal
part of the marines, was landed on the left bank,
and lieutenant Brown, with the cohorn and small-arm
party, accompanied by lieutenant Patrick M'Veagh,
with a few marines, landed on the right bank.
Just as the leading british boat, containing a
68-pounder in the bow and a 24-pounder in the stern,
had arrived within sight of the american boats, the
68-pounder, the previous fire from which had dis-
persed a body of Indians from the banks of the
river, became disabled, and the boat pulled round
to bring the 24-pounder to bear. Considering by
this that the British were on their retreat, the Ameri-
cans, to the number of 150 riflemen, 200 Indians, and
a large body of militia and cavalry, unexpectedly
rushed upon them. The British made a noble
resistance, but were at length overpowered and
made prisoners. As a proof that captains Popham

1814. and Spilsbury and their party of seamen and marines
June. made an obstinate resistance, their loss amounted to 18 killed, including Mr. Hoare, a master's mate of the Montreal, and 50 dangerously wounded, including lieutenants Cox and M'Veagh. Captain Popham concludes his official letter on the subject with this paragraph: "The exertions of the american officers of the rifle corps, commanded by major Appling, in saving the lives of many of the officers and men, whom their own men and the Indians were devoting to death, were conspicuous, and claim our warmest gratitude."

Sir James Yeo returns to Kingston from off Sackett's-Harbour. On the 11th of June the Americans launched at Sackett's-Harbour the Mohawk, of about 1350 tons, mounting 28 long 24-pounders on the main-deck, two long 24s and 18 carronades, 42-pounders, on the quarterdeck and forecastle, total 48 guns, with a complement of 460 men. This made the british and american forces in this lake stand, in relative broadside force at, british 2752 lbs., and american 4188 lbs., and in number of men at, british 1517, american 2321. In the latter end of July sir James Yeo raised the blockade of Sackett's-Harbour, and returned to Kingston; and on the 1st of August commodore Chauncey sailed out of port, vexed at the unwillingness of the British to meet him on "equal terms."

Effects of capt. Barclay's defeat on Lake Erie. Some operations on the upper lakes now demand our attention. The possession of captain Barclay's fleet had not only given to the Americans the entire command of Lake Erie, and the large lakes, Huron and Superior, leading from it, but had restored to them the immense territory of Michigan, and gained over on their side five nations of Indians, late the allies of the British. Had the spirit of the Americans, indeed, kept pace with the apathy and neglect, so conspicuous on the part of the british commander in chief, the province of Upper Canada could not have held out as it did.

After the capture of the british flotilla on this lake, captain Perry retired to Lake Ontario, to

serve under commodore Chauncey, and the com- 1814.
 mand on Lake Erie devolved upon captain Arthur Aug.
 Sinclair. In the month of July, taking with him the Capt.
 two large brigs, Niagara and St.-Lawrence, and the Sin-
 Caledonia, Ariel, Scorpion, and Tigress, captain clair
 Sinclair entered Lake Huron, and on the 4th of fails
 August failed in an attack upon the british port of in an
 Michilimacinac at the head of that lake. Having attack
 obtained intelligence that lieutenant Miller Worsley, on Mi-
 of the british navy, with the north-west company's chili-
 schooner Nancy, was at Nattawassaga, captain maci-
 Sinclair, first despatching the St.-Lawrence and nac.
 Caledonia brigs, with a portion of the troops to coope-
 rate with the american army at Fort Erie, proceeded
 with the remainder, to attack a post deemed far less
 difficult of reduction, than the "Gibraltar," (Michili-
 macinac,) from which he and colonel Croghan had
 just been repulsed. The Nancy was lying about
 two miles up the Nattawassaga, under the protection
 of a block-house, situated on the south-east side of
 the river; which here runs parallel to, and forms a
 narrow peninsula with, the shore of Gloucester bay.
 This enabled captain Sinclair to anchor his vessels
 within good battering distance of the block-house. Attacks
 A spirited cannonade was kept up between the schoo-
 block-house, where, besides two 24-pounder car- ner
 ronades on the ground, a 6-pounder was mounted, Nancy
 and the three american vessels outside, composed of at Nat-
 the Niagara, mounting, as formerly stated, 18 car- tawaa-
 ronades, 32-pounders, and two long 12-pounders, saga.
 and the Tigress and Scorpion, mounting, between
 them, one long 12, and two long 24 pounders. In
 addition to this force, a 5½-inch howitzer, with a
 suitable detachment of artillery, had been landed
 on the peninsula. Against these 24 pieces of cannon,
 and upwards of 500 men, were opposed, one piece
 of cannon, and 23 officers and seamen.

Further resistance was in vain; and, just as lieu-
 tenant Worsley had prepared a train, leading to the
 Nancy from the block-house, one of the enemy's shells

1814. burst in the latter, and both the block-house and the vessel were presently blown up. Lieutenant Worsley and his men escaped in their boat up the river; and, fortunately, the whole of the north-west company's richly laden canoes, bound across the lake, escaped also into French river. Having thus led to the destruction of a vessel, which the american commander had the modesty to describe as "his britannic majesty's schooner Nancy," captain Sinclair departed for Lake Erie; leaving the Tigress and Scorpion to blockade the Nattawassaga, and, as that was the only route by which supplies could be readily forwarded, to starve the garrison of Michilimacinac into a surrender.

Lieuts.
Worsley and
Bulger
capture
american
schooner
Tigress

After remaining at their stations for a few days, the two american schooners took a trip to the neighbourhood of St.-Joseph's. Here they were discovered, on the 25th of August, by some Indians on their way to Michilimacinac. On the 31st lieutenant Worsley and his men arrived at the garrison, bringing intelligence that the two schooners were five leagues apart. An immediate attempt to effect their capture was, therefore, resolved upon; and on the 1st of September, in the evening, lieutenant Worsley and his party, composed of midshipman Dobson, one gunner's mate, and 17 seamen, reembarked in their boat; and lieutenant Bulger, of the royal Newfoundland regiment, along with two lieutenants, two sergeants, six corporals, and 50 rank and file, of his own corps, one hospital-mate, one bombardier, and one gunner of the royal artillery, with a 3 and 6 pounder, major Dickson, superintendent of indian affairs, four others of the indian department, and three indian chiefs, making a total of 92 persons, embarked on board three other boats. A body of Indians also accompanied the expedition in their canoes. It was sunset on the 2d, before the boats arrived at the Detour, or entrance of St.-Mary's strait; and not until the next day, the 3d, that the exact situation of the american vessels

became known. At 6 P. M. the boats pulled for the nearest vessel, ascertained to be at anchor about six miles off. The Indians, who, as just stated, had quitted Michilimacinac with the expedition, remained three miles in the rear; and at 9 P. M. the schooner appeared in sight. As soon as she discovered the boats, which was not till they had approached within 100 yards of her, the american vessel opened a smart fire from her long 24-pounder and musketry. The boats, however, advanced rapidly; and, two of them boarding her on each side, lieutenant Worsley carried, in five minutes, the United States' schooner Tigress, of one long 24-pounder on a pivot-carriage, and 28 officers and men. The british loss was two seamen killed, lieutenant Bulger, and four or five soldiers and seamen wounded; and the american loss, three men, including one or two officers, wounded.

1814.
Sept.

On the 4th, early in the morning, the prisoners were sent in one of the boats, under a guard, to Michilimacinac, and preparations were made to attack the other schooner, which was understood to be at anchor 15 miles further down. On the 5th the Scorpion was discovered working up to join her supposed consort, the american ensign and pendant being still kept flying on board the Tigress. In the evening the Scorpion anchored at the distance of about two miles from the Tigress; who, just as day was dawning on the 6th, slipped her cable, and, running down under her foresail and jib, was within 10 yards of the Scorpion before any discovery was made. In five minutes more the deck of the latter was covered by the two lieutenants and their men, and the british flag was hoisted over that of the United States. The Scorpion was manned with 30 officers and men; and carried one long 24, and, in her hold, one long 12 pounder. Her loss amounted to two killed and two wounded; that of the British to one or two soldiers wounded, making the total british loss, in capturing the two vessels, amount to three

Also
the
Scor-
pion.

1814 killed and eight wounded. These two american
 Aug. "gun-boats" averaged, according to british measure-
 State of equip- ment, 100 tons. They had on board abundance of
 ment of these vessels, shot, including some 32-pounders, and in small-arms,
 &c. between them, 64 muskets and 104 cutlasses and
 boarding-pikes. As a proof of the value of these
 two schooners, now that they were afloat upon Lake
 Huron, their hulls and stores were appraised by the
 proper officers at upwards of 16000*l.* sterling. In
 another point of view, they were still more valuable.
 Commodore Perry's victory left the Americans with-
 out an enemy to fear upon the lakes Erie and Huron;
 and yet do we find, still remaining on board of the
 four (including two that will be named presently)
 smallest of his nine vessels, three times as many
 experienced seamen, as were on board all the "very
 superior british fleet," which that "illustrious american
 commodore," after an obstinate struggle, succeeded
 in capturing.

Cap- On the 12th of August the three United States'
 ture of armed schooners, Somers, Ohio, and Porcupine, each
 ameri- with 35 men commanded by a lieutenant, being station-
 can ed close to Fort Erie, then in the possession of the
 armed schoo- Americans, for the purpose of flanking the british
 ners by army in their approach against it, captain Dobbs, of
 Dobbs. the Charwell, with a detachment of 75 seamen and
 marines from his vessel and from the Netley, lieute-
 nant Coples Radcliffe, lying opposite to Fort George,
 resolved to attempt their capture or destruction.
 For this purpose, the seamen carried the captain's
 gig upon their shoulders from Queenstown to French-
 man's creek, a distance of 20 miles. From this spot,
 by the aid of lieutenant-colonel Nichol, the quar-
 ter-master general of the militia, five batteaux, as well
 as the Charwell's gig, were got across through the
 woods to Lake Erie, a distance of eight miles.
 Two of the american schooners, the Somers and
 Ohio, were presently carried, sword in hand; "and
 the third," says captain Dobbs, "would certainly

have fallen, had not the cables been cut; which made us drift to-leeward of her among the rapids." It is almost impossible, without having been on the spot, to form an adequate idea of the rapidity, and of course the danger, of the Niagara stream, as it approaches the cataract.

The british loss was lieutenant Radcliffe and one seaman killed, and four seamen wounded; the loss on the part of the Americans one seaman killed, three officers and four seamen wounded. When it is considered that, with the Porcupine, the Americans had a force of 92 lbs. weight of metal and 105 men, to oppose to 75 men, without any artillery whatever, the exploit of captain Dobbs and his brave followers deserves every commendation. It proved that british seamen could find expedients to capture two out of three fine american armed schooners, in waters, where the gig and five batteaux of the conquerors were the only british vessels afloat.

About the middle of October, when the season for cruising on Lake Ontario was almost over, the British succeeded in getting ready their large ship the St.-Lawrence, of 2305 tons, and intended to mount 102 guns. A "peep into Kingston," by one of the american light vessels, gave commodore Chauncey timely notice of this, and he retired to Sackett's-Harbour to stir out no more. The Americans now commenced building two "74-gun ships," each of whose broadsides would have about equalled that of the St.-Lawrence. To meet this on the part of the British, a 74 was commenced upon, and a frigate, like the Princess-Charlotte, constructed; but, before the lakes were open in the ensuing spring, peace came, otherwise, there is no saying whether the building mania would not have continued, until there was scarcely room on the lake for working the ships.

During the months of June and July, the Quebec papers were continually announcing the arrival of transports from the Garonne with troops; and those

Under these circumstances except an American, say, would not have beaten, evolutions could be practised troops which the United States into the field? A British army with a most excellent train of in chief by Sir George Prevost officers of the first distinction their camp at Chambly, "with American official account, "of country, as far as Crown Point and Lake Champlain.

British
force
on Lake
Cham-
plain.

In the early part of August the British on Lake Champlain consisted of Linnet, of 16 long 12-pounders and boys, commanded by Captain Daniel Chubb, of 10 carronades, 18-pounders, 6-pounder, and 40 men and boys, Lieutenant McWhie, cutter Finch, of six 18-pounder, one medium or columbiad 18-pounder, 6-pounder, Lieutenant William Finch, and

1814. Montreal on Lake Ontario, accompanied by his first lieutenant, arrived to take the command of the Confiance, as the new ship was named, as well as of the British squadron on Lake Champlain: which squadron, as soon as the Confiance could be armed and manned, Sir George Prevost had directed to cooperate with the British army, in the intended attack upon Plattsburg and the American shipping anchorage near it. On the same day that he arrived, Sir George detached Captain Pring with the 4th gun-boat to protect the left flank of the British army, and on the 4th Captain Pring took quiet possession of Isle de la Motte, and constructed a battery of long 18-pounders to support his position at Pointe aux Peres, where the supplies of the British army were ordered to be landed. The arrival of Sir George's army, by Odell's signal to line of demarcation, was the signal for the British army left under his command, to move to the neighbourhood of the lines. The arrival of the latter's shattered camp was on the 2d of September. Sir George Prevost on the 3d of September ordered the British left division, of 1000 men, composed of all but the reserve, to move forward on the 4th, and to encamp eight miles of Plattsburg; and on the 5th, to move 25 miles along the river, in the morning, to the mouth of the

boats, mounting between them two long 24, and five long 18, pounders, and six 32-pounder carronades, and manned with 294 men and boys, of whom 30 were british seamen: the remainder, as was the case with the greater proportion of the crews of the three larger vessels, consisted of privates of the 39th regiment and canadian militia, very few of which latter could speak a word of english. This would make a total of 48 guns and 444 men and boys; the greater part, as already stated, regular soldiers and canadian militia.

1814.
Aug.

The american force consisted of the ship *Saratoga*, mounting on a flush deck eight long 24-pounders, 12 carronades, 32-pounders, and six carronades, 42-pounders, total 26 guns, with a complement of 250 as her regular crew, besides a detachment of the 15th United States' infantry acting as marines, making a total of at least 300 men, commanded by commodore Thomas Macdonough; brig *Eagle*, captain Robert Henley, of eight long 18-pounders and 12 carronades, 32-pounders, total 20 guns, and 142 men as her regular crew, and at least 160, including her acting marines; schooner *Ticonderoga*, lieutenant commandant Stephen Cassin, of eight long 12, and four long 18, pounders and five 32-pounder carronades, total 17 guns, and a regular crew of 115, with about 15 acting marines, or 130 men in the whole; sloop *Preble*, of seven long 9-pounders and 45 men, and 10 gun-boats, mounting between them six long 24, six medium 18, and four long 12 pounders, and manned with 346 men; making a grand total of 86 guns and 981 men, the whole of the latter, excepting the regular troops (about 83 in number) acting as marines, seamen from the american ships of war laid up at New-London and other ports on the Atlantic frontier.

American
force.

On the 25th of August a ship, which had been hastily constructed by the British, was launched in the vicinity of Isle-aux-Noirs; and on the 3d of September captain George Downie, late of the

The approach of sir George's army, by Odelltown, to the line of demarcation, was the signal for major-general Macomb, with the few regulars of general Izard's army left under his command, to retire from the neighbourhood of the lines towards Plattsburg; and the latter's abandoned camp was entered by sir George Prevost on the 3d of September. From this position the british left division, of about 7000 men, composed of all but the reserve and heavy artillery, moved forward on the 4th, and halted on the 5th, within eight miles of Plattsburg; having taken four days to advance 25 miles along the lake-shore. On the 6th, early in the morning, the left division proceeded on its march, major-general Power's, or the right column advancing by the Beckmantown road; and major-general Brisbane's column, except one wing of De Meuron's regiment, left to keep up the communication with the main body, taking the road that runs parallel to Lake Champlain. At a bridge crossing a creek that intersects this road, the american general had stationed a small force, with two field-pieces, to abattis and obstruct the way. In the mean while the right column, meeting with no impediments to its pro-

gress, passed rapidly on, 700 american militia, upon whom, says general Macomb, "the british troops did not deign to fire, except by their flankers and advanced patrols," retreating before it. The rapid advance of major-general Power secured major-general Brisbane from any further opposition than such as he might experience from the american gun-boats and gallies. Notwithstanding a heavy fire from their long 24 and 12 pounders, the bridge across the creek was presently reconstructed, and the left column moved forward upon Plattsburg.

1814.
Sept.

The village of Plattsburg contains about 70 houses and stores, and is situated on both sides of the river Saranac, close to its confluence with Lake Champlain. The statement in the british official account, that, "the column entered Plattsburg," must, therefore, be understood to mean, either the township of that name, or the small portion of the village which was situated on the north side of the stream. It was to the south side that general Macomb, after taking up the planks of the bridge, had retreated; and it was on the elevated ridge of land forming its bank, that the Americans had erected their works. General Macomb mentions three forts, and two block-houses strongly fortified. One of the latter mounted three guns; and we believe there were from 15 to 20 guns in all, most of them of heavy caliber. There was, also, a large new stone-mill, four stories high, which formed an excellent position for the american riflemen. In was on the evening of the 6th, that the british left division arrived on the north bank of the Saranac. "But," says, an american writer, "not all the gallies, aided by the armament of the whole flotilla, which then lay opposite Plattsburg, under commodore Macdonough, could have prevented the capture of Macomb's army, after its passage of the Saranac, had sir George Prevost pushed his whole force upon the margin of that stream. Like General Drummond, at Erie, he made a pause, in full view of the un-

1814. finished works of the Americans, and consumed five days in erecting batteries, and throwing up breast-works, for the protection of his approaches. Of this interval the american general did not fail to avail himself; and kept his troops constantly employed in finishing his line of redoubts.* The reader need scarcely to be reminded, that this is the same Plattsburg, at which colonel Murray, with 1000 troops, landed; the river on which it stands, the same Saranac, up which the colonel ascended, three miles, to burn the enemy's barracks; and that those barracks were burnt, while an american regular army, more than twice as strong as general Macomb's, lay encamped in the neighbourhood.†

Noirs.

Sir George Prevost knew perfectly well, that the *Confiance*, although afloat and with captain Downie's pendant flying on board of her, had scarcely men enough to get the rigging over her mast-heads, and that the shipwrights were still at work upon her hull; but he, notwithstanding, urged captain Downie, both by letter and through the officers of his staff, to cooperate with the army. At length came an insinuation, that "the commander in chief hoped captain Downie allowed himself to be delayed by nothing but the state of the wind." The effect of this upon a spirit like that of the gallant first lieutenant of the *Seahorse* in July, 1808,‡ may be partly conceived. On the 8th the wind proved fair; and immediately the *Confiance* and her consorts moved from Isle-aux-Noirs into Lake Champlain, and anchored abreast of the main body of the british army, to wait until the whole of her crew had arrived from Quebec, and until the carpenters had fitted the ring-bolts for her guns, and the joiners completed the magazine for the reception of the powder. without which those guns could be of no use. On the 9th captain Downie received a draught of marines, numbering, with a few artillerymen and

* Sketches of the War, p. 319.

† See p. 367.

‡ See vol. v. p. 88.

soldiers, 86 men; and, in the course of that and the following day, the whole of the petty officers and seamen intended for the ship came on board; forming a total of 270 officers, seamen, marines, and boys. The seamen, among whom were 19 foreigners, were men of inferior quality and bad character; who, as the term is, had "volunteered" from their respective ships, or, in plain words, had been dismissed from them in disgrace. Some, indeed, had been liberated from irons, for the very purpose of manning captain Downie's ship. Ten ships of war at Quebec had furnished 118 of these "volunteers;" and some transports had lent 25 of their men. The men of the *Confiance*, therefore, were all strangers to each other and to their officers; and captain Downie was acquainted with no officer on board his ship but his first lieutenant, and the latter with none of the other officers.

 State
 of the
 Confiance's
 crew.

On the 10th, just as the last draught of the motley crew we have described was ascending the side of the *Confiance*, while the loud clank of the builder's hammer was still sounding in all parts of the ship, while the guns were being breeched and pointed through the ports, and while the powder, for the want of a place fitted for its reception, was lying in a boat alongside, an officer from sir George Prevost came to solicit the instant cooperation of the british squadron. Relying upon the assurance now given by the commander in chief, that the army should attack the works of Plattsburg while the squadron was attacking the american ships lying in front of them, captain Downie, in spite of the unprepared state of the *Confiance*, consented to go into action on the following morning. It was then agreed, that the *Confiance*, when rounding Cumberland head, which forms the northernmost point of Plattsburg bay, should scale her guns; and that, at that instant, the column of attack should advance to storm the american works. As it could not well be said, that the *Confiance* mounted any guns at all,

1814. until they were placed upon her broadside, and as
 Sept. that had only just been done when the ship was thus
 on the eve of going into action with a greatly
 superior force, we have deferred until now giving
 any account of the *Confiance's* armament. The ship
 mounted 26 long 24-pounders on the main deck, also
 two 32-pounder carronades through her bow, and
 two of the same through her stern ports. Upon the
 poop were mounted, *en barbette*, four 24-pounder
 carronades, and upon the topgallant forecastle, in
 the same ineffective manner, two 24-pounder car-
 ronades, and one long 24 on a traversing carriage;
 making a total of 37 guns.

 ron.

On the 11th, at daylight, with the carpenters still
 working at his ship, captain Downie made the signal
 to weigh. This was promptly complied with; and
 the *Confiance*, *Linnet*, *Chubb*, *Finch*, and 10 gun-
 boats, made sail towards Plattsburg bay. At 7 A. M.
 the american squadron was seen at anchor, in line
 ahead, abreast of the encampment of general Ma-
 comb's army. The *Eagle*, flanked by five gun-
 boats, was in the van; then the *Saratoga*; next to
 her the *Ticonderoga*; and lastly the *Preble*, also
 flanked by five gun-boats. It was captain Downie's
 intention to lay the *Confiance* athwart the hawse of
 the *Saratoga*; that the *Linnet*, supported by the
Chubb, should engage the *Eagle*, and the *Finch*,
 with the gun-boats, the *Ticonderoga* and *Preble*.
 While the squadron was lying to, that the command-
 ing officer of each vessel might be informed of the
 plan of attack, commodore Downie caused it to be
 made known to the different crews, that the army
 would cooperate with them. This was necessary, to
 inspire the men with confidence, in attacking a force
 so evidently superior. Lieutenant John Robertson,
 first of the *Confiance*, went to her crew while at their
 quarters, and explained particularly to the men the
 nature of the cooperation, as he had understood it
 from captain Downie.

At 7 h. 40 m. A. M. the british squadron filled and

made sail in order of battle; and the moment the ^{1814.} ^{Sept.} ^{Confiance} ^{scales} ^{her} ^{guns} ^{as by} ^{precon-} ^{certed} ^{signal,} ^{but the} ^{army} ^{makes} ^{no} ^{move-} ^{ment.} Confiance, the leading ship, arrived abreast of Cumberland head, she scaled her guns as had been agreed upon; but the signal was not answered from the army. Sir George Prevost did, however, direct a signal to be made: it was for the army "to cook," instead of to fight; to give the men their breakfasts, instead of to deprive the enemy of the opportunity of taking his. To the honour of the soldiers, and the officers in general, they all panted to rush forward; but, in truth, a third part of the troops would have done all that was required, and, in two hours from the time the Confiance scaled her guns, would have given a victory to both army and navy, instead of a flight to one, and a defeat to the other. Captain Downie now discovered, too late, the mistake into which his confidence had led him. The Confiance was already in the enemy's bay, and almost within gun-shot of his squadron. At 8 A. M., favoured by a very light air, amounting almost to a calm, the american row-gallies and gun-boats commenced upon the Confiance a heavy and galling fire. Having by this means had two anchors shot from her bows, the Confiance, at 8 h. 10 m., was obliged to anchor within 400 yards upon the beam, instead of, as had been intended, close athwart the bows, of the Saratoga. The Linnet and Chubb soon afterwards took their allotted stations, something short of that distance; but the cutter presently had her main boom shot away, and, drifting within the enemy's line, was compelled to surrender. The Finch had the misfortune, while proceeding to her station, to strike on a reef of rocks off Crabb island; where there was an american battery of two guns, which fired at the Finch, and wounded two of her men, the only loss she sustained. All the gun-boats, except the Murray, Beresford, and another, abandoned the object assigned them; that is, ran away, almost as soon as the action commenced. Within 15 minutes after

American gun-boats fire at Confiance, and action commences

Finch gets aground and british gun-boats retreat.

1814. the commencement of the action, fell the british
 Sept. commanding officer, the brave, the lamented captain
 Death Downie. The way in which he met his death, is of
 of capt. too extraordinary a nature to be passed over. A
 Downie shot from the Saratoga struck one of the Confi-
 ance's 24-pounders, and threw it completely off the car-
 riage against captain Downie, who was standing
 close in the rear of it. He received the blow upon
 his right groin, and, although signs of life remained
 for a few minutes, never spoke afterwards. No
 part of his skin was broken: a black mark, about the
 circumference of a small plate, was the only visible
 injury. His watch was found flattened, with the
 hands pointing to the hour, minute, and second, at
 which the fatal blow had been given.

Confiance, failing to bring a fresh broadside to bear, is obliged to sur-
 render. At length, the greater part of the Confi-
 ance's guns on the larboard side having been disabled, lieu-
 tenant Robertson, now the commanding officer,
 made an effort to wind the ship round, to bring her
 starboard broadside to bear; but, owing to the loss
 of her two anchors and the shameful flight of the
 gun-boats, this object could not be effected. Having
 nearly the whole of her guns on the engaged side in
 a similar state to those of the Confi-
 ance, the Sara-
 toga let go a stern anchor, cut her bower cable, and,
 with great ease, winded herself round, so as to
 bring her larboard broadside to bear upon her an-
 tagonist, now lying in a defenceless state; and who,
 at 10 h. 30 m., after receiving several raking broad-
 sides, hauled down her colours: thus affording the ex-
 traordinary instance, of a ship being launched, fitted,
 fought, and captured, within the short space of 16 days.

Sur- A few minutes before the Confi-
 render f able to withstand the heavy and well-directed
 Linnet, fire of the Linnet, the Eagle cut her cable and took
 &c. up a fresh position between the Ticonderoga and
 Preble. The attention of the american commodore
 was now directed to the Linnet; who, although greatly
 disabled, continued the action with spirit. At 10 h.
 45 m. A. M., after having, for upwards of 10 minutes,

withstood the whole united force of the american ^{1814.} squadron, the Linnet hauled down her colours. As ^{Sept.} the Finch had been compelled to strike before, and the Chubb, from having her cable cut, very soon after, the action had commenced; and as the gun-boats had all effected their escape, the surrender of the Linnet gave a complete victory to the american squadron.

The brigade of the british army, which was stationed near the banks of the Saranac, on the opposite side of which, as already stated, lay the army, if it deserved such a name, of general Maccmb, was commanded by major-general Brisbane. It appears that, while the action between the squadrons was going on, this portion of the british army, either mistaking or disregarding sir George's cooking signal, attacked the american works, and not only crossed the Saranac, but brought away some prisoners. This showed at once the practicability of the thing, and only wanted the quiescence, temporary or final, of the commander in chief, and the british army would have gained a victory in spite of sir George Prevost; but who, nevertheless, with the assistance of "Mr. secretary Brenton" in penning the despatch, would have got all the credit of it. Unfortunately, some one acquainted sir George with what was going on at the banks of the Saranac; and, learning at the same time that the Confiance had struck her colours, he sent orders to major-general Brisbane to desist from beating the poor Americans, to leave them in quiet possession of their half-carried works, and hasten after him out of the enemy's territory.

So certain was commodore Macdonough, that, in a few minutes, the batteries at Plattsburg would be turned against the american squadron, that, before he took formal possession of the prizes, he removed his ships out of gun-shot. Lieutenant Robertson was then conveyed on board the Saratoga, to deliver up his sword. On that occasion, commodore Mac-

1814. donough spoke to him as follows: "You owe it,
 { Sept. sir, to the shameful conduct of your gun-boats and cutters, that your are performing this office to me; for, had they done their duty, you must have perceived, from the situation of the Saratoga, that I could hold out no longer: and indeed, nothing induced me to keep up her colours, but seeing, from the united fire of all the rest of my squadron on the Confiance, and her unsupported situation, that she must ultimately surrender." Here is an acknowledgment candid and honourable in the extreme. Can this be the "T. Macdonough," whose signature appears to the two american official accounts of the action?

Loss on The loss on board the Confiance amounted to 41
 board killed, including her captain and another officer,
 the two and about 60, including one officer, wounded. The
 squadrons. Linnet had her second lieutenant, boatswain, and eight seamen killed, one midshipman and 13 seamen and marines wounded; the Chubb, six seamen and marines killed, one officer and 15 seamen and marines wounded; and the Finch two seamen and marines wounded; total 57 killed and 92 wounded. The loss on the american side, has been officially reported as follows: Saratoga, 28 killed and 29 wounded; Eagle 13 killed and 20 wounded; Ticonderoga, six killed and six wounded; and Preble and the gun-boats five killed, and three wounded; total 52 killed and 58 wounded: a tolerable proof that the British, notwithstanding the many disadvantages under which they laboured, had made a good use of their ill-fitted guns.

Force
engag-
ed on
each
side.

Now for a comparative statement of the force engaged in this, viewed in its consequences on both sides of the Atlantic, very important lake action. As the Finch grounded opposite an american battery before the engagement between the squadrons commenced, we shall exclude her from the estimate; and so we shall one half of the british gun-boat force. Only three of the 10 gun-boats, indeed, came near enough

to engage, while all the american gun-boats are admitted to have participated in the action. On the american side, we shall take no notice of the armed sloops Montgomery and President, the batteries on shore, or the "militia ready to assist." With respect to the *Confiance*, although she mounted 37 guns, 17 only of them, as has already been shown, could be presented in broadside; and even four of these, on account of there being only a ridge-rope, or rail, along either side of the poop and topgallant fore-castle, were disabled after the first discharge. Having no gun-locks on board, (they being in the *Junon* frigate, which did not arrive at Quebec in time,) captain Downie attempted to substitute car-ronade-locks; which he contrived to fasten to the guns by means of copper hoops. But the plan was not found to answer, and matches were resorted to. Determined that the British should derive no advantage from publishing this fact, an american paper subjoins to an exaggerated account of the *Confiance's* force in guns, "with locks." We have enumerated the guns of the *Confiance* at 37; but we should have stated, that the ship had two long 18-pounders among the ballast in the hold. These commodore Macdonough, in his official letter, places on the "berth deck;" and, in his statement of comparative force, actually carries them out as part of the *Confiance's* "39 guns." The substance of the following statement having appeared before the american, as well as the british, public more than nine years ago, and being, as far as we know, to this hour uncontradicted, we again submit it as the actual

This, without bringing in aid the shameful abandonment of the enterprise by the commander in

1814. chief of the Canadas, shows that the squadron under commodore Downie wanted a full third of being as strong as that under commodore Macdonough. As was to be expected, however, the Americans claimed it as a victory obtained over a decidedly superior force; and, instead of attributing the retreat of the british army of 11000 men to the imbecility (to say no worse) of general sir George Prevost, they ascribed it all to the superior prowess of the american army, of less than 2000 men, under general Alexander Macomb.

Death
of sir
George
Prevost

Sir
James
Yeo's
charges
against
him.

Unfortunately, justice was interrupted in its course by the death of sir George, before he could be tried upon the following charges brought against him by commodore sir James Lucas Yeo: 1. For having, on or about the 11th of September, 1814, by holding out the expectation of a cooperation of the army, under his command, induced captain Downie, late of his majesty's ship *Confiance*, to attack the american squadron on Lake Champlain, when it was highly imprudent to make such attack without the cooperation of the land forces, and for not having afforded that cooperation. 2. For not having stormed the american works on shore, at nearly the same time that the said naval action commenced, as he had given captain Downie reason to expect. 3. For having disregarded the signal for cooperation, which had been previously agreed upon. 4. For not having attacked the enemy on shore, either during the said naval action, or after it was ended; whereby his majesty's naval squadron, under the command of captain Downie, might have been saved.

Court-
martial
on capt.
Pring
and his
officers.

On the 28th of August, 1815, captain Pring, and the surviving officers and crews late belonging to the british Lake Champlain squadron, were tried by court-martial on board the *Gladiator* at Portsmouth, and the following was the sentence pronounced: "The court having maturely weighed the evidence, is of opinion, that the capture of *H. M. S. Confiance*, and the remainder of the squadron, by the american squadron, was principally caused by the british

squadron having been urged into battle previous to its being in a proper state to meet the enemy; by the promised cooperation of the land forces not being carried into effect, and by the pressing letters of their commander in chief, whereby it appears that he had on the 10th of September, 1814, only waited for the naval attack to storm the enemy's works. That the signal of the approach on the following day was made, by the scaling of the guns, as settled between captain Downie and major Coote; and the promised cooperation was communicated to the other officers and crews of the british squadron before the commencement of the action. The court, however, is of opinion, that the attack would have been attended with more effect, if a part of the gun-boats had not withdrawn themselves from the action, and others of the vessels had not been prevented by baffling winds from getting into the stations assigned them. That captain Pring of the Linnet, and lieutenant Robertson, who succeeded to the command of the Confiance, after the lamented fate of captain Downie, (whose conduct was marked by the greatest valour,) and lieutenant Christopher James Bell, commanding the Murray, and Mr. James Robertson, commanding the Beresford, gun-boats, who appeared to take their trial at this court-martial, conducted themselves with great zeal, bravery, and ability, during the action: that lieutenant William Hicks, commanding the Finch, also conducted himself with becoming bravery; that the other surviving officers and ship's crew, except lieutenant M'Ghie of the Chubb, who has not appeared here to take his trial, also conducted themselves with bravery; and that captain Pring, lieutenant Robertson, lieutenant Hicks, lieutenant Bell, and Mr. James Robertson, and the rest of the surviving officers and ship's company, except lieutenant M'Ghie, ought to be most honourably acquitted; and they are hereby most honourably acquitted accordingly." On the 18th of the ensuing September lieutenant M'Ghie was put

1814.
Aug.

1814. upon his trial, and the following was the sentence pronounced upon him: "The court having heard the circumstances, determined, that the Chubb was not properly carried into action, nor anchored so as to do the most effectual service; by which neglect, she drifted into the line of the enemy: that it did not appear, however, that there was any want of courage in lieutenant M'Ghie; and, therefore, the court did only adjudge him to be severely reprimanded.

American accounts. Upon the american accounts we shall bestow but a few words. Having seen the effects of commodore Perry's puritanical epistle, commodore Macdonough writes his first letter in the same mock-religious strain: "The Almighty has been pleased to grant us a signal victory on Lake Champlain, in the capture of one frigate, one brig, and two sloops of war of the enemy." The *Confiance* a "frigate;" and the Chubb and Finch "sloops of war"! Yet, according to an american writer, commodore Macdonough was "a religious man, as well as a hero, and prayed with his brave men on the morning of the victory."*

Cautiousness of commodore Chauncey contrasted with the rashness of sending the *Confiance* into action. In the very summer preceding the Lake Champlain action, some of the american newspaper editors were blaming commodore Chauncey for not sailing out of Sackett's-Harbour, in the new ships *Superior* and *Mohawk*, after the latter had been launched nearly two, and the former upwards of three months. How did that cautious commander answer them? Why, by writing to the secretary of the american navy thus: "I need not suggest to one of your experience, that a man of war may appear, to the eye of a landsman, perfectly ready for sea, when she is deficient in many of the most essential points of her armament; nor how unworthy I should have proved myself of the high trust reposed in me, had I ventured to sea in the face of an

* Naval Monument, p. 155.

enemy of equal force, without being able to meet him in one hour after my anchor was weighed." ^{1814.} _{Sept.} And yet, had poor captain Downie acted with only half this caution, his fair fame would have been tarnished, and the very service to which he belonged scoffed at, by no less a man than the governor-general of the british north-american provinces.

On the 26th of September the british 74-gun ship Plantagenet, captain Robert Lloyd, 38-gun frigate Rota, captain Philip Somerville, and 18-gun brig-sloop Carnation, captain George Bentham, cruising off the Western Isles, discovered at anchor in the road of Fayal the american privateer schooner General-Armstrong, of seven guns, including a long 24 or 32 pounder on a traversing carriage, and about 90 men, captain Guy R. Champlin. Captain Lloyd sent lieutenant Robert Faussett, in the Plantagenet's pinnace, into the port, to ascertain the force of the schooner, and to what nation she belonged. Owing to the strength of the tide, and to the circumstance of the schooner getting under way and dropping fast astern, the boat drifted nearer to her than had been intended. The american privateer hailed, and desired the boat to keep off, but that was impracticable owing to the quantity of stern-way on the schooner. The General-Armstrong then opened her fire, and, before the boat could get out of gun-shot, killed two and wounded seven of her men.

As the captain of the american privateer had now broken the neutrality of the port, captain Lloyd determined to send in and endeavour to cut out his schooner; which had since come to again with springs close to the shore. Accordingly, at 8 P. M., the Plantagenet and Rota anchored off Fayal road; and at 9 P. M. four boats from the Plantagenet and three from the Rota, with about 180 seamen and marines, under the command of lieutenant William Matterface, first of the frigate, pulled in towards the road. The Carnation had been directed to cover the boats in their advance; but, owing, as it appears, to the strength of

American privateer General-Armstrong fires at boat of Plantagenet in Fayal road.

Capt. Lloyd sends boats of Plantagenet and Rota to cut her out.

1814. the current and the intricacy of the navigation, the
 Sept. brig did not arrive within gun-shot of the american
 Inabi- schooner, and therefore was not of the slightest use.
 lity of At midnight, after a fatiguing pull against a strong
 Carna- wind and current, the boats got within hail of the
 tion to General-Armstrong, and received from her, and from
 coope- a battery erected, with a portion of her guns, on the
 rate. commanding point of land under which she had
 anchored, a heavy fire of cannon and musketry. In
 about half an hour, this fire sank two of the
 boats, and killed or disabled two thirds of the party
 that had been detached in them. The remainder re-
 turned, and at about 2 A. M. on the 27th reached the
 Rota.

Serious The loss appears to have been of the following
 loss lamentable amount: the Rota's first and third lieutenants, (William Matterface and Charles R. Norman,) one midshipman, and 31 seamen and marines killed, the Rota's second lieutenant, (Richard Rawle,) first lieutenant of marines, (Thomas Park,) purser, (William Bengé Basden,) two midshipmen, and 81 seamen and marines wounded. Among the langridge which the Americans fired, were nails, brass buttons, knife-blades, &c.; and the consequence was, that the wounded, as on former occasions recorded in this work, suffered excruciating pain before they were cured. Soon after daylight the Destruction of the privateer. Carnation went into the road to destroy the privateer, but the Americans saved the British the trouble by setting fire to her themselves.

BRITISH AND FRENCH FLEETS.

Two circumstances, in the abstract for the com-1815.
mencement of the present year,* indicate the return ^{Jan.}
of peace; the small number of line-of-battle cruisers
in commission, and the great number of ships sold,
taken to pieces, or otherwise removed from the
service.†

The number of commissioned officers and masters, ^{Officers}
belonging to the british navy at the beginning of ^{of the}
1815, was, ^{british}
^{navy.}

Admirals	70
Vice-admirals	73
Rear-admirals	76
„ superannuated	35
Post-captains	824
„ „	39
Commanders or sloop-captains	762
„ superannuated	60
Lieutenants	3211
Masters	666

And the number of seamen and marines, voted for
the service of the same year, was 70000 for three,
and 90000 for ten, lunar months.‡

On the 2d day of January, 1815, his royal high- ^{New}
ness the prince regent was pleased to advance the ^{order}
splendour, and to extend the limits, of the most ^{of the}
honourable military order of the bath, “to the end ^{Bath.}
that those officers, who have had the opportunity of
distinguishing themselves by eminent services
during the late war, may share in the honours of the
said order, and that their names may be delivered

* See Appendix, Annual Abstract No. 23.

† See Appendix, Nos. 11 and 12.

‡ See Appendix, No. 13.

1815. down to remote posterity, accompanied by the
 marks of distinction which they have so nobly
 earned." The order of the bath was thenceforward
 to be composed of three classes. The first class
 was to consist of knights grand-crosses, and was
 limited to 72; of whom 12 might be persons who
 had rendered eminent services to the state in
 civil and diplomatic employments. The second
 class, limited to 180, exclusive of 10 foreign
 officers holding british commissions, was to consist
 of knights-commanders; and the third class, of com-
 panions of the bath.

Quali-
 fication
 of a
 C. B.

The qualifications of a companion of the bath are thus defined: "No officer shall be nominated a companion of the said most honourable order, unless he shall have received, or shall hereafter receive, a medal, or other badge of honour, or shall have been especially mentioned by name in despatches published in the London Gazette, as having distinguished himself by his valour and conduct in action against his majesty's enemies, since the commencement of the war in 1803, or shall hereafter be named in despatches published in the London Gazette, as having distinguished himself." This was all very proper; but, suppose the board of admiralty should neglect to publish in the "London Gazette" despatches, incontestably showing, that an officer had "distinguished himself by his valour and conduct in action"? For instance, had captain Manners of the Reindeer, after having been hewed and hacked as he was, escaped the two bullets that passed through his head, would he not have deserved to be made a companion, at least, if not a knight-commander, of the bath? But the account of the Reindeer's action did not appear in the Gazette: therefore captain Manners, had he survived, would not have been officially qualified to receive an honour, designed by the sovereign for the exclusive reward of gallantry. Nay, there would have been another impediment in the way. The order descends no lower than post-

captains: whereas, in the french navy, even an enseigne de vaisseau is deemed eligible to bear an order; and, in a navy-list of a recent date now before us, the names of several of that class appear with an honorary distinction affixed to them. 1815.

The sudden return to France, of Napoléon from the island of Elba, again sent lord Exmouth (the new title which, since the 14th of May, 1814, had been deservedly bestowed upon sir Edward Pellew) to the Mediterranean; but, before the admiral had well got to his station, the battle of Waterloo was fought, and shortly afterwards the cause of all this new commotion surrendered himself into the hands of the British. The registers and histories of the period will give the particulars of these important events. It will be enough for us to state, that Buonaparte embarked from Elba on the 24th of February in an armed brig, landed on the afternoon of the 1st of March in the gulf of Juan, near Cannes, and on the 21st entered the capital of France amidst the greetings of at least 200000 of the inhabitants. The battle of Waterloo was fought, as need scarcely be stated, on the 18th of June; and on the 15th of July, finding he could not evade the british cruisers and get to the United States, Buonaparte surrendered himself to captain Frederick Lewis Maitland, of the Bellerophon 74, lying in Basque roads. The latter ship immediately conveyed her important charge to Torbay, and then to Plymouth; where the Bellerophon arrived on the 26th. On the 7th of August the ex-emperor was removed to the 74-gun ship Northumberland, captain Charles Bayne Hodgson Ross, bearing the flag of rear-admiral sir George Cockburn, K. C. B. On the 8th the Northumberland sailed for the island of St-Helena, and, on the 16th of October, there safely disembarked the "general" and his few attendants. Europe being thus freed, all parties felt seriously inclined for peace; and on the 20th of November treaties were entered into at Paris between the different powers.

Buonaparte's return from Elba, surrender, and conveyance to St-Helena.

1815. During the short interval of renewed war, that had
 June. preceded the execution of these treaties, one or
 Rivoli attacks and captures Melpomène. two naval occurrences happened, which require our notice. On the 30th of April, a few miles to the northward of the island of Ischia, the british 74-gun ship Rivoli, captain Edward Sterling Dickson, after a running fight and brave defence of 15 minutes, captured the french 40-gun frigate Melpomène, captain Joseph Collet, from Porto-Ferrajo to Naples, to take on board Napoléon's mother. The frigate was very much cut up in hull, masts, and rigging, and had six men killed and 28 wounded. The Rivoli, on the other hand, had only one man mortally, and a few others slightly wounded.

Pilot falls in with Légère. On the 17th of June, at daylight, the british brig-sloop Pilot, of 16 carronades, 32-pounders, and two sixes, captain John Toup Nicolas, being about 50 miles to the westward of Cape Corse, observed and chased a ship in the east-north-east. This proved to be the french buonapartean corvette Légère, of 20 carronades, 24-pounders, and two 12-pounders on the main deck, with four or six light guns, probably brass 6-pounders, on the quarterdeck, capitaine de frégate Nicolas Touffiet. At 2 p. m. the Légère hauled towards the Pilot, and, hoisting a tri-coloured pendant and ensign, fired a gun to-windward. At 2 h. 30 m., after some manœuvring on both sides to get the weathergage, the Pilot placed herself close on the Légère's weather beam, and hoisted her colours. Observing that the corvette was preparing to make sail to pass ahead, and being at the same moment hailed, "Keep further from us," the Pilot fired a shot through the Légère's foresail. A broadside from the french ship immediately followed, and the action commenced within pistol-range. The brig's shot, being from her lee guns and directed low, evidently struck the hull of her opponent in quick succession, while the Légère's shot passed high, and chiefly disabled the Pilot's rigging and sails.

The two vessels engage.

By 4 p. m. the fire of the Légère had considerably

slackened, and at 4 h. 30 m. she hauled up her main-sail, and backed her mizen topsail, in order to drop astern. Captain Nicolas endeavoured also to shorten sail; but, having had every brace, bowline, and clue-garnet cut away, the Pilot unavoidably shot ahead. The brig, then, as the only alternative, put her helm up to fire into her opponent's bows. Of this movement on the part of the Pilot, the *Légère* took immediate advantage, by hauling close to the wind, and making off with all the sail she could carry. The yards of the Pilot being wholly unmanageable, her main topgallantmast over the side, her maintop-sail yard shot away in the slings, and her stays and the chief part of her standing as well as running rigging cut away, the brig was not in a condition for an immediate pursuit. In about an hour, however, the Pilot got another maintopsail yard across, and the sail set, and by 7 P. M. was going seven knots by the wind in chase of the french corvette, then bearing on her weather bow about six miles distant. The Pilot continued the chase until the 18th, at daylight; when, to the mortification of all on board, it was found that the *Légère* had eluded them in the night.

Légère
makes
off,
leaving
Pilot
too dis-
abled to fol-
low.

The principal damages sustained by the Pilot have already been described: her loss amounted to one seaman killed, another mortally wounded, and her first lieutenant, (Keigwin Nicolas, the captain's brother,) purser, (Thomas Rowe,) 10 seamen, and two marines wounded. The damages of the *Légère* were almost wholly in her hull and lower masts; and her loss is represented to have amounted, out of a crew that probably was not less than 170 men, to 22 killed and 79 wounded, 64 of them severely. Even half this loss would show that the guns of the Pilot had been ably managed; and, indeed, the action throughout reflects very great credit upon captain Nicolas, his officers, and brig's company.

Da-
mage
and
loss on
each
side.

According to the following statement, which has

1815. appeared in print, the Pilot was better provided against accidents by shot than any of her unfortunate sister-brigs; such as the Avon, Peacock, and others. Im-

ges-
ted by
captain
Nicolas
"On rejoining the Pilot, (end of 1814,) captain Nicolas applied to the admiralty to have that sloop altered agreeably to a plan he proposed; and by which a shot-hole could be immediately stopped, between wind and water, in any part of the ship: and which, in the former arrangement of the store and bread rooms, was impossible. This, it had been confidently asserted, was the principal cause of the capture of the Avon and Peacock. The admiralty not only complied with his request, but ordered all the 18-gun brigs then under repair at Portsmouth to be fitted on the same plan."* It is very probable that some improvement had also been made in the fastenings of the Pilot's carronades.

Sub-
mission
of
those
islands
to
Louis
XVIII.
The news of the landing of Napoléon in France soon became known at the two principal islands of the French in the West Indies. At Martinique, the governor, the comte de Vaugiraud, was favourable to Louis XVIII.; but the governor of Guadeloupe, vice-admiral the comte Linois, so often named in these pages, was a stanch buonapartist. The british naval and military commanders in chief at the Leeward islands were rear-admiral sir Philip Charles Durham, K. C. B., and lieutenant-general sir James Leith. Sometime in the month of June, at the request of the comte de Vaugiraud, a body of british troops landed at Martinique, to aid him in preserving the island for king Louis; and in the month of August sir Philip Durham and sir James Leith, assisted by the french royalist comte, landed a body of troops on the island of Guadeloupe. On the 10th of August, after a skirmish, in which the british army lost 16 killed and about 50 wounded, the comte Linois surrendered the island by capitulation, and was afterwards, along with his adjutant-general,

* Naval Chronicle, vol. xl. p. 427.

conveyed to France by virtue of one of the articles ^{1815.} of the treaty.

The treaty of peace between France and the allies, which was signed at Paris on the 30th of May, 1814, and interrupted for a short time as has already been briefly noticed, was again signed at Paris on the 20th of November, 1815. Of this treaty, it will be only necessary for us to state that, by the 8th article, France received back from Great Britain (not the first time that the latter has ceded by the pen what she had won by the sword) all her colonies, fisheries, factories, and establishments of every kind, as they were possessed by her on the 1st of January, 1792, in the seas, or on the continents, of America, Africa, and Asia; except Tobago and Sainte-Lucie, and the Isle of France, Isle Rodrigue, and the Sechelles.

LIGHT SQUADRONS AND SINGLE SHIPS.

In our account of the unfortunate “demonstration” before the city of Baltimore, we mentioned, as one cause of the abandonment of the enterprise, and of the tepidness with which it had been conducted, an “ulterior object” in the view of the naval commander in chief. That ulterior object was the city of New-Orleans, the capital of the state of Louisiana. It stands upon the left bank of the river Mississippi, 105 miles, following the stream, and 90 miles, in a direct line, from its mouth. The population of the city, in 1814, was estimated at 23242 persons. The line of maritime invasion extends from Lake Pontchartrain, on the east, to the river Têche, on the west, intersected by several bays, inlets, and rivers, which furnish avenues of approach to the metropolis. But the flatness of the coast is every where unfavourable for the debarkation of troops; and the bays and inlets being all obstructed by shoals or bars, no landing can be effected, but by boats, except up the Mississippi; and that has a bar at its mouth, which shoals to 13 or 14 feet water. There

1815. were not, it is true, any american 74s, or 60-gun frigates, building or lying blockaded at New-Orleans; but those who suggested the expedition well knew that, as the cotton crops of Louisiana, and of the Mississippi territory, had been for some years in accumulation, the city-warehouses contained merchandise to an immense amount. Indeed, considering that New-Orleans was the emporium of the annually increasing productions of a great portion of the western states of the republic, the enormous sum of 30000000*l.* was perhaps not an over estimate of what, in the event of even a temporary possession of the city, would have been shared by the captors.

Capt.
Percy
pro-
ceeds
to
attack
Fort
Bow-
yer.

Before we say the little we mean to say on the subject of the attack upon New-Orleans, an unsuccessful enterprise upon a small scale in the vicinity, and which, according to chronological order, should have been included in the preceding year's narrative, requires to be briefly noticed. On the 12th of September, 1814, early in the morning, captain the honourable Henry William Percy, of the british 20-gun ship *Hermes*, having under his orders the 20-gun ship *Carron*, captain the honourable Robert Churchill Spencer, and 18-gun brig-sloops *Sophie* and *Childers*, captains Nicholas Lockyer and John Brand Umfreville, anchored off the coast of West Florida, about six miles to the eastward of Mobile point, for the purpose of making an attack upon Fort Bowyer situated on that point, and mounting altogether 28 guns, including 11 long 32 and 24 pounders. The ships afterwards got under way and stood towards Mobile point; but, owing to the narrowness of the channel and the intricacy of the navigation, they did not arrive, until the afternoon of the 15th, in the neighbourhood of the fort.

The *Hermes* at last gained a station, within musket-shot distance; the *Sophie*, *Carron*, and *Childers* anchoring in a line astern of her. Previously to this, a detachment of 60 marines and 120 Indians, with a 5½-inch howitzer, under the orders of

major Edward Nicolls, had disembarked on the peninsula. Sixty of the Indians, under lieutenant Castle, were immediately detached, to secure the pass of Bonsecours, 27 miles to the eastward of the fort. The great distance at which the Carron and Childers had unavoidably anchored confined the effective cannonade, on the part of the British, to the *Hermes* and *Sophie*; nor was the fire of the latter of much use, as, owing to the rottenness of her timbers, and her defective equipment, her caronades drew the bolts, or turned over at every fire. The *Hermes*, before she had fired many broadsides, having had her cable cut, was carried away by the current, and presented her head to the fort. In that position the british ship remained from 15 to 20 minutes, while the raking fire from the fort kept sweeping the men from her deck. Shortly afterwards the *Hermes* grounded, directly in front of the fort. Every means were now used to get the ship afloat, but without effect. All the boats were destroyed except one; and, with that one, captain Percy removed to the *Sophie* the whole of his surviving crew, and then set the ship on fire. The *Hermes* and *Sophie* alone sustained any loss. The first had 25 men killed and 24 wounded; the other, six killed and 16 wounded; total, with one marine killed on shore, 32 killed and 40 wounded. The Americans acknowledged a loss of only four killed and four wounded.

On the 8th of December vice-admiral Cochrane, in the *Tonnant*, along with several other ships, arrived and anchored off the Chandeleur islands. On the same day two american gun-boats fired at the 38-gun frigate *Armide*, captain Edward Thomas Troubridge, as, accompanied by the *Seahorse* frigate and *Sophie* brig, she was passing down, within the chain of small islands, that run parallel to the shore from Mobile towards Lake Borgne. Three other gun-boats were presently discovered cruising in the lake. On the 10th, 11th, and 12th, the remainder of the

deleur
islands.

1815. men of war and troop-ships arrived; the 74s anchoring off Chandeleur islands, and the frigates and smaller vessels between Cat island and the main, not far from the entrance to Lake Borgne. The bayou Catalan, or Bienvenu, at the head of Lake Borgne, being the contemplated point of disembarkation, the distance from the anchorage at Cat island to the bayou 62 miles, and the principal means of transport open boats, it became impossible that any movement of the troops could take place, until these gun-boats were destroyed. It was also an object to get possession of them in a serviceable state, that they might assist, as well in transporting the troops, as in the attack of any of the enemy's forts in the route. Accordingly, on the night of the 12th, 42 launches, armed with 24, 18, and 12 pounder carronades, and three unarmed gigs, carrying, altogether, about 980 seamen and marines, under the orders of captain Lockyer, assisted by captains Henry Montresor and Samuel Roberts, of the brig-sloop Manly and bomb-vessel Meteor, in three divisions, each commanded by a captain in the order named, pushed off from the Armide.

Capt.
Lockyer de-
tached to at-
tack ameri-
can gun-
boats on
Lake
Borgne

An account of their force. The american gun-boats, which were the object of attack, consisted of No. 156, mounting one long 24-pounder on a traversing carriage, four 12-pounder carronades, and four swivels, with 41 men on board, commanded by lieutenant-commandant Thomas Ap Catesby Jones; No. 23, mounting one long 32-pounder on a traversing carriage, six long 6-pounders, two 5-inch howitzers and four swivels, with 39 men on board, commanded by lieutenant Isaac M'Keene; No. 162, one long 24-pounder, four 6-pounders and four swivels, with 35 men, commanded by lieutenant Robert Spedden; Nos. 5 and 163, each armed with the same carriage-guns as No. 23, the first with 36 men, commanded by sailing-master John D. Ferris, the other with 31 men, commanded by sailing-master George Ulrick; schooner Seahorse, of one 6-pounder and 14 men, sailing-master William Johnson; and

sloop Alligator, of one 4-pounder and eight men; sailing-master Richard S. Sheppard. We have taken the number of men from the american official account; but captain Lockyer's letter makes the number greater. And, as lieutenant Jones did certainly mistate the force of his little squadron in guns, there is every probability that he also underrated the number of his men. 1815.

On the 13th, at 10 A. M., from his anchorage at the Malheureux islands, lieutenant Jones discovered the boats advancing towards Passe Christian, as he supposed, to disembark troops. He immediately detached the Seahorse to bay St.-Louis, to destroy the stores there; and at 3 h. 30 m. P. M., when the flood-tide made, got under way with the remaining vessels and stood towards the Petites-Coquilles. At about 3 h. 45 m. captain Lockyer despatched some boats to cut out the Seahorse, who had moored herself advantageously under the protection of two 6-pounders mounted on a commanding point. It appears that, after sustaining a very destructive fire for nearly half an hour, the boats were repulsed; but, considering his position untenable against a greater force, Mr. Johnson set fire to his vessel and the warehouses containing the stores, and the whole were consumed. One american vessel set on fire by her crew.

On the 14th, at 1 A. M., lieutenant Jones moored his five principal gun-vessels with springs on their cables and boarding-netting triced up, in a close line abreast, athwart the narrow channel called Malheureux-island passage, and made every preparation to give the british boats a warm reception. At about 9 h. 30 m. A. M., observing the Alligator trying to rejoin her five consorts at anchor, captain Lockyer detached captain Roberts with a few boats to take her. This was speedily accomplished without much opposition. Having arrived within long gun-shot of the enemy, and, the men having pulled 36 miles, a great part of the way against a strong current, captain Lockyer brought the boats to a grapnel. British capture sloop Alligator, and pull for five american gun-boats.

1815. and allowed the crews to take their breakfasts. This done, at about 10 h. 30 m. A. M. the boats weighed, and took again to their oars; pulling against a strong current of at least three knots an hour, and being exposed all the while to a heavy and destructive fire of round and grape from the long guns of the american flotilla.

At about noon captain Lockyer, and lieutenant George Pratt, in the second barge of the Seahorse, closed with the gun-boat of the american commodore; and, after an obstinate struggle, in which the greater part of the officers and men in the boat were either killed or wounded, including among the wounded the captain himself severely, and lieutenant Pratt mortally, succeeded in boarding her. Seconded, then, by the Seahorse's first barge commanded by midshipman George Robert White, and by the boats of the Tonnant under lieutenant James Barnewell Tattnell, the British soon carried the gun-boat. Lieutenant Tattnell had his boat sunk alongside; but, getting on board another, gallantly pushed on to the attack of the remaining four gun-vessels. Upon these the guns of No. 156 were now turned; and, in the course of five minutes, with the assistance of the second and third divisions of boats under captains Montresor and Roberts, they were all secured.

They
attack
and
capture
the
whole
of
them.

Loss on
each
side. The loss on the british side was extremely severe, occasioned, except in the instance of captain Lockyer's boat, and those already named as supporting him in the attack upon No. 256, by the heavy fire opened upon the boats in their tedious advance against the current. Three midshipmen, (Thomas W. Moore, John Mills, and Henry Symons,) 13 seamen, and one private marine were killed, and one captain, (Nicholas Lockyer,) four lieutenants, (William Gilbert Roberts, John Franklin, Henry Gladwell Etough, and George Pratt, the latter mortally,) one lieutenant of marines, (James Uniacke,) three master's mates, (Mark Pettel, James Hunter, and John Sudbury)

seven midshipmen, (John O'Reilly, Robert Uniacke, 1815. Peter Drummond, George Ward Cole, William Grove White, David M'Kenzie, and — Pilkington, the latter mortally,) 50 seamen, and 11 private marines wounded; total, 17 killed and 77 wounded. The loss on board the american flotilla was comparatively trifling, amounting to six men killed and 35 wounded, including among the latter lieutenant Jones, the commanding officer, who conducted himself with great bravery. For the gallantry which they had displayed on the occasion, captains Lockyer, Montresor, and Roberts were deservedly made post; and some of the lieutenants and midshipmen also received a step in rank.

The obstacle to a passage through the lakes being now removed, the disembarkation of the troops commenced. On the 16th the first division, consisting of the 85th regiment, landed at Isle-aux-Poix, a small swampy spot, at the mouth of the Pearl river, about 30 miles from the anchorage, and nearly the same distance from the bayou Catalan, or Bienvenu, intended as the point of disembarkation. Various causes delayed the arrival of the boats at the fishermen's village, near the entrance of the bayou, until midnight on the 22d; at which time the advance, consisting in all of 1688 men, under the command of colonel Thornton of the 85th regiment, commenced ascending the bayou Mazaut, or the principal branch of the Bienvenu; and, at 4 A. M. on the 23d, landed at the extremity of Villeré's canal, running from the Mazaut towards the Mississippi. We must not, however, trench upon the province of the military historian. We shall, therefore, merely state, that on the 8th of January, 1815, an unsuccessful attack was made by the british army, under major-general sir Edward Pakenham, upon the strongly fortified position of the american major-general Jackson; and that the loss on the part of the former, amounted to the enormous total, in killed, wounded, and prisoners, of nearly 2000 men, including among

1815. the killed the brave commander in chief. The full details of the action have already appeared in a work devoted exclusively to the subject of the military operations of the late american war; and to that, on account more particularly of the quantity of naval matter yet to be included in this volume, we must beg to refer the reader.*

Capt.
Barrie
arrives
off
Cumber-
land
island.

Early in the month of December rear-admiral Cockburn, in the Albion, from Bermuda, bringing with him the Orlando frigate and some smaller vessels, arrived in the Chesapeake, but merely to carry away the colonial marines; with whom, on the 14th, the rear-admiral steered towards Amelia Island, in East Florida; having left orders for captain Barrie to follow, with the Dragon, Hebrus, and Regulus. Captain Barrie accordingly departed soon afterwards, leaving a few frigates and sloops in the Chesapeake; and, on the 10th of January, arrived off Cumberland Island, the southernmost of the chain along the coast of Georgia, and separated by Cumberland Sound from Amelia Island.

Attacks
a fort
at Point
Petre
and
cap-
tures
town
of St.
Mary's,
&c.

Rear-admiral Cockburn not having yet arrived, captain Philip Somerville of the 38-gun frigate Rota, as the senior officer, determined upon employing the two companies of the 2d West-India regiment, and the detachments of royal marines which had recently arrived on that coast, in a combined attack upon the frontier-town of the state of Georgia, St.-Mary's, situated a few miles up the river of that name, dividing the United States from East Florida. On the 13th an attack, with about 700 troops, marines, and seamen, under the command of captain Barrie, was made on the fort, or key to the entrance of the river, at Point Petre. This fort mounted two 24, two 18, one 9, and two brass 6, pounders; from which, however, scarcely a single discharge was made, ere the garrison abandoned the post, and fled to the woods in the rear. On the

* James's Military Occurrences, vol. ii. p. 355.

14th, the combined forces, accompanied by the bomb-
vessels Devastation and Terror, captains Thomas
Alexander and John Sheridan, ascended the river
to St.-Mary's. Contrary to expectation, here, also,
no resistance was made; and the town, the shipping
in the harbour, and the merchandise in the stores,
were taken quiet possession of. Soon afterwards an
expedition of boats went a considerable distance
further up the river, and brought down the Countess-
of-Harcourt indiaman, which had been captured and
carried in there by a Charlestown privateer; also
a beautiful gun-boat, named the Scorpion, a present
from the town of St.-Mary's to the United States.

1815.

On the 15th of January rear admiral Cockburn,
who had been blown off the coast by strong north-
west gales, arrived and took the command; and on
the 22d, after removing the guns, and destroying
the fort and barracks, at Point Petre, the British
descended the river to Cumberland island; of which
immediate possession was taken. The troops and
marines were here encamped; and the rear-admiral
established his head-quarters at a very large house,
surrounding it with the ordnance brought from
Point Petre. On the 22d of February eight
launches, two pinnaces, and one gig, containing
186 officers, seamen, and marines, under the com-
mand of captain Phillott, of the Primrose, assisted
by captain Bartholomew, of the Erebus, ascended
the St.-Mary's river, without opposition, 120 miles;
when a heavy fire of musketry, opening upon them
from each side, compelled the British to retreat.
While daylight lasted, a spirited fire was kept up
by the boats; but, unfortunately, after dark, the
men could not be restrained from firing, by which
they exposed themselves to the view of the enemy.
The river, in some parts, was so narrow, that a
couple of stout trees, many of which were on the
banks, felled and thrown across, would have com-
pletely cut off the retreat of the boats. That not
having been done, the boats got back to the island,

1815. with four killed, and 25 wounded, including among
 Feb. the latter the two captains; also lieutenant of
 marines John Fraser, and midshipmen James Eve-
 ringham and Jonathan Haworth Peel.

Rear- Rear-admiral Cockburn remained at his fortified
 adm. house on Cumberland island, awaiting the arrival
 Cock- of some troops, to aid in making an attack upon the
 burn town of Savannah in Georgia; when, on the 25th
 re- of February, the american general in the vicinity
 mains apprized him, that peace had been concluded
 atCum- between the United States and Great Britain. Such
 berland was the fact. The treaty had been signed at Ghent on
 island the 24th of December, 1814, and was ratified by the
 till he president at Washington on the 18th of February,
 hear- 1815. Of its terms, we shall merely say, that "Free
 of the trade and sailors' rights," the avowed object of the
 peace. war, remained precisely in the same undefined state,
 as before it was declared by Mr. Madison and his
 senate. "Canada," said an american writer at the
 early part of the war, "must be conquered, or we
 shall stand disgraced in the eyes of the world. It
 is a rod held over our heads; a fortress which
 haughtily frowns upon our country, and from which
 are disseminated throughout the land, the seed of
 disaffection, sedition, and treason. The national
 safety and honour and glory are lost, if we do not
 win this splendid prize." And yet, in spite of sir
 George Prevost and his acts, Canada remained
 unconquered. Although an end had been put to
 hostile operations on shore, we have still two or
 three naval actions to record.

Ameri- We formerly stated, that commodore Decatur
 can had removed with his crew on board the President
 expedi- frigate at New-York. This ship, like the United-
 tion to States and Constitution, had made some reduction
 the in her armament: she had landed two of her 42-
 bay of pounder carronades; which, we believe, were put
 Bengal. on board the brig-sloop Syren, then fitting for sea
 in the port. The american government being still
 determined upon an expedition to the East Indies, a

squadron, consisting of the *Président*, *Peacock*, and *Hornet*, along with the *Macedonian* and *Tom-Bowline* brigs, laden with stores for their use, was ordered to proceed to the bay of Bengal. On the night of the 18th of November the *Hornet*, which had been left at New-London as a guard-ship, succeeded in eluding the blockading force, and reached New-York. 1815.

The british squadron which, towards the close of the year 1814, cruised off the port of New-York, was commanded by captain John Hayes, of the 56-gun ship *Majestic*, who had under his orders the 40-gun frigate *Endymion*, captain Henry Hope, and the 38-gun frigate *Pomone*, captain John Richard Lumley. Between the time of her quitting Halifax and her junction with captain Hayes, the *Endymion* had experienced a serious misfortune. On the 9th of October, when off the shoals of Nantucket, she fell in with the american privateer brig *Prince-de-Neufchatel*, of 18 guns and 120 or 130 men. It being calm, captain Hope detached his boats, under the orders of lieutenant Abel Hawkins, first of the *Endymion*, to capture the privateer. The boats were repulsed, after sustaining the loss of lieutenant Hawkins, one midshipman, and 26 seamen and marines killed, the second lieutenant, one master's mate, and 35 seamen and marines wounded; besides which the launch was captured, and the crew made prisoners. So determined and effective a resistance did great credit to the american captain and his crew. On the 31st the *Endymion* fell in with the 56-gun ship *Saturn*, captain James Nash, bound to Halifax; and, sending on board, along with her surgeon and his servant, 28 wounded officers and men, received from the *Saturn*, to replace the severe loss she had sustained, one lieutenant, four midshipmen, and 33 seamen and marines. Unsuccessful attack by the *Endymion*.

On the 13th of January, 1815, captain Hayes was joined by the 38-gun frigate *Tenedos*, captain Hyde

1815. Parker. Although at this time close off the Hook and in sight of the american squadron at anchor near Staten island, the british ships were the same evening blown off the coast by a violent snow-storm. On the next day, the 14th, the weather became more moderate; but, the wind blowing fresh from the west-north-west, the squadron could not get in with the Hook. Having no doubt that commodore Decatur would take advantage, as well of the favourable state of the wind as of the absence of the british squadron, captain Hayes, in preference to closing the land to the southward, stood away to the northward and eastward, with the view of taking a station in the supposed track of the american squadron on its way out; and, singular enough, at the very instant of arriving at that point, about an hour before daylight on the 15th, Sandy-Hook bearing west-north-west distant 15 leagues, the principal object of search to all the british captains made her appearance very near them.

Considering the chance of escape greater, by taking a separate departure with the ships of his squadron, commodore Decatur, on the afternoon of the 14th, weighed and put to sea with the President and brig Macedonian, having left directions with captain Warrington, to join him at the island of Tristan-d'Acunha, with the Peacock, Hornet, and Tom-Bowline. At 8 h. 30 m. p. m., owing partly to a mistake in the pilots and partly to the ship's increased draught of water from the quantity of stores on board of her, the President struck on the bar, and did not get off for an hour and a half. Having, besides some trifling damage to her rudder, shifted her ballast and got herself out of trim, the President would have put back, but the strong westerly wind prevented her. Accompanied by the brig, the american frigate now shaped her course along the shore of Long island for 50 miles, then steered south-east by south, until, at 5 a. m. on the 15th, she encountered the Majestic and her companions. Three

of the ships appearing right ahead, the President hauled up, and passed about two miles to the northward of them; and at daylight commodore Decatur found himself, as he states, chased by four ships; the Majestic about five miles astern, the Endymion a little further in the same direction, the Pomone six or eight miles on his larboard, and the Tenedos barely in sight on his starboard quarter. The Tenedos, indeed, having parted from her squadron the preceding evening, was taken for a second enemy's ship, and captain Hayes ordered the Pomone, by signal, to bear away in chase of her. Consequently the President, at first, was pursued by the Majestic and Endymion only.

1815.
Jan.

These and the american frigate were soon under all sail, steering about east by north, with the wind now at north-west by north. At 6 h. 30 m. A. M. the Majestic fired three shot at the President, but, owing to the distance, without effect; nor, for the same reason probably, were they returned. Towards noon the wind decreased; and the Endymion, in consequence, began to leave the Majestic and gain upon the President. At 1 h. 15 m. P. M. the american frigate commenced lightening herself, by starting her water, cutting away her anchors, throwing overboard provisions, spare spars, boats, and every article of the sort that could be got at: she also kept her sails constantly wet from the royals down. At 2 P. M. the President opened a fire from her stern guns; which, at 2 h. 30 m., the Endymion returned with her bow-chasers. At 2 h. 39 m. P. M. a shot from the President came through the head of the larboard fore lower studding-sail, the foot of the mainsail, and the stern of the barge on the booms, and, perforating the quarterdeck, lodged on the main deck, without doing any other damage. Towards 5 P. M., owing to the advance of the Endymion on her starboard and lee quarter, the President luffed occasionally, to bring her stern guns to bear, and was evidently much galled;

Endymion is fired at by, and fires in return at President.

dymion

At 5 h. 30 m. P. M., the Endymion having for the last 20 minutes maintained a position within half point-blank shot on her quarter, the President brailed up her spanker, and bore away south, to bring her antagonist upon her beam and endeavour to effect her escape to-leeward. Putting her helm hard a-weather, the Endymion met the manœuvre; and the two frigates came to close action in a parallel line of sailing. At 6 h. 4 m. P. M. the President commenced with musketry from her tops, and the Endymion returned the fire with her marines; hauling up occasionally, to close her antagonist, without losing the bearing of her broadside. The two ships were now not more than half musket-shot apart; the Endymion with her rigging and sails considerably cut, and the President with the principal part of her damage in the hull, as betrayed by the slackened state of her fire.

Hauls
off,
and is
raked
by
latter.

At 6 h. 45 m. the President hauled up, apparently to avoid her opponent's fire. Profiting by this, the Endymion poured in two raking broadsides; then hauled up also, and again placed herself on the President's starboard quarter. At 7 h. 15 m. the President shot away the Endymion's boat from her larboard quarter, also her lower and maintopgallant studding-sails. From 7 h. 18 m. to 7 h. 25 m. the President did not return a shot to the vigorous fire still maintained by the Endymion. Recommencing, then, the President shot away the Endymion's maintopmast studding-sail and main brace, and at 7 h. 32 m. hauled suddenly to the wind, as if to try the strength of her antagonist's masts. Having no fear for these, the Endymion trimmed sails, and, hauling up, bestowed another raking fire; to which the President, now evidently much shattered, replied with a discharge from one stern gun. In 10 minutes the american frigate kept more away, firing only at intervals; and at 7 h. 58 m. ceased altogether and

Endy-
mion
drops
astern
from
damag-
ed
sails.

showed, or appeared to show, (for we are doubtful of the fact,) a light. Conceiving that the President had struck, the Endymion also ceased firing, and began to bend new sails, her present ones having been cut into ribands by the President's bar and chain shot; one of which had torn away 12 or 14 cloths of her foresail, stripping it almost from the yard.

While the Endymion was thus compelled to drop astern, the President continued her course to the eastward, under a crowd of canvass, much relieved, no doubt, by the absence of the former. At 11 h. 15 m. P. M. the Pomone gained a position upon the President's larboard quarter, and, luffing up, fired her starboard broadside, but did little or no damage. The President immediately shortened sail and luffed up also, as if to pour a broadside into the Pomone. Instead of that, however, the american frigate hailed that she had surrendered, and hoisted a light in her mizen rigging. Not hearing the hail, and mistaking the object of the light, the Pomone fired a second broadside, acknowledged to have been as ineffectual as the first. On this, the President luffed up still sharper, as if to lay the Pomone on board, and instantly hauled down her light, again hailing that she had surrendered. At this time the Tenedos, who had been hailed by the Endymion and informed that the only two boats her misfortune with the Neufchatel had left her were destroyed, ranged up on the President's starboard side, and, hailing, was answered: "The american frigate President: we have surrendered." Captain Parker immediately sent a boat and took possession; as did nearly at the same moment, captain Lumley of the Pomone. At a few minutes before 9 P. M., having in the short space of 54 minutes, besides repairing her running rigging, bent new courses, main topsail, jib, foretopmast staysail, and spanker, and trimmed them to the wind, the Endymion went again in chase, as fresh as when she began the action. At 9 h. 45 m. the

 at 11 h. 30 m. P. M., when the President struck.

Da-
 mage
 and
 loss to
 Endy-
 mion
 and
 Presi-
 dent.

The principal damages sustained by the Endymion have already been detailed. Her fore topmast was struck badly, but none of her other masts in any serious degree. Out of her 319 men and 27 boys in crew, the Endymion had 10 seamen and one sergeant of marines killed, and 12 seamen and two private marines wounded. If the high firing of the President displayed its effects in the disordered rigging and sails of the Endymion, the low firing of the Endymion was equally conspicuous in the shattered hull and lower masts of the President. The star-board side of the ship was riddled from end to end, particularly near the quarter. Almost every port-sill and port-timber, both on the main and the quarter deck, exhibited marks of shot. Three shot had entered the buttock, one of which had passed into the after magazine. Several shot had entered between wind and water, and some under water, which had cut the knees and timbers much. A great many shot had also passed through the ship, between the main and quarter decks and in the waist; but, as a proof of the slight effect of the Pomone's fire, one shot only had entered on the larboard side: it passed through at the tenth port, and carried away the upper sill, clamp, and diagonal knees. With so many shot-holes in her hull, the President might well have six feet water in the hold. Five or six of her guns were completely disabled. Out of her 465 men and four boys in crew, the President had three lieutenants, and 32 petty officers, seamen, and marines killed, her commander, (slightly,) master, two midshipmen, and 66 seamen and marines wounded; total, 35 killed and 70 wounded.

Of the Endymion's force in guns we have already given a full account. Her brass 18-pounder on the forecastle, we shall not include in the broadside force, because it could not, by possibility, be used there,

without displacing one of the 32-pounder carronades.* 1816.
 The boat-carronade we shall also reject, for the
 reason formerly given. That leaves the Endymion
 with 24 guns upon her broadside. Her established
 net complement was 347 men and boys; but her loss
 by the Neufchatel, and the deficiency with which
 she had originally quitted port, left the Endymion
 with the number already stated.

Jan.
 Guns,
 &c. of
 Endy-
 mion.

The President had landed four of her 24 car-
 ronades,† one pair at the beginning of the war and
 the other pair recently; but, like the Constitution,
 the President now fought one of her two upperdeck
 24-pounders through a spare port on her quarter-
 deck, and the other through a spare port on the
 forecastle. She mounted also upon a travelling
 carriage, a brass 8-inch howitzer; for which there
 was a spare port at the gangway. We shall con-
 sider this gun, although of a 68-pound caliber, merely
 as a 24-pounder. In her fore top the President
 mounted two brass 4-pounders, in her main top the
 same, and one in her mizen top. These guns,
 although they were evidently used, and must have
 produced some effect on the Endymion's deck, we
 shall not reckon as a part of the President's force.
 This leaves the american frigate 53 guns on her
 decks, and 28 of them in broadside.

Guns
 of Pre-
 sident.

The number of prisoners delivered to the agent at
 Bermuda was 434. Add to these, beside the 35
 acknowledged by the President's officers to have
 been killed, six or seven too badly wounded to be
 removed, and we have 475 as the President's com-
 plement; just two less than were named in her watch-
 bill. Yet commodore Decatur and two of his
 officers swore before the surrogate, that the Presi-
 dent had "about 450, but certainly not 460, men
 when the action commenced." The consequence of
 this oath, this american oath, was, that the captors
 got head-money for 450 men only; when there was

 ber of
 her
 crew.

* See p. 471.

† See p. 7.

1815. proof positive that 469, and every probability that 477, men were in the ship at the time stated. We shall take the number of which there was that proof, 465 men and four boys. The President's ship's company were a remarkably stout set of men, and a great many british deserters were discovered among them; but, as the news of the peace very soon arrived, the men were not molested.

The two ships arrive at Bermuda, dismasted in a gale.

On the 17th, in a violent storm from the eastward, the Endymion lost her bowsprit and her fore and main masts; the latter chiefly from the shrouds giving way where they had been knotted after the action. The ship was also obliged to throw overboard the whole of her quarterdeck and forecastle guns. In the same gale, the President carried away all three of her masts. Several of her guns were also thrown overboard; and, in the battered state of her hull by the Endymion's fire, it was considered a mercy to the people on board that she did not founder. On the 25th the two ships arrived at Bermuda. We will now give the

Testimony of Mr. Bowie the President's schoolmaster as to manner of her surrender.

As soon as the gale of wind had dismasted and otherwise disabled the Endymion, so as to leave an inference that the shot of the President had mainly contributed to reduce her to that state, commodore Decatur wrote his official letter. In a very few days after his arrival at Bermuda, the communicativeness of one of his officers made him regret that he had despatched the letter. Mr. Bowie, the President's schoolmaster, when deposing before the surrogate relative to the capture of the ship, says: "When the Endymion dropped astern, we were confident of escaping. Shortly after, discovered two ships

coming up, (Pomone and Tenedos,) when commodore Decatur ordered all hands below to take care of their bags. One of the ships commenced firing; and commodore Decatur called out, 'We have surrendered,' and gave this deponent the trumpet to hail, and say, they had surrendered. The Pomone's fire did damage to the rigging, but neither killed nor wounded any person. The President did not return the Pomone's fire, but hoisted a light in the mizen rigging, as a sign of submission." Again: "When the two ships were coming up, a light was hoisted in the mizen rigging of the President, as this deponent conceived at the time, as an ensign or flag, but, as he afterwards had reason to believe, as a sign that they had surrendered; for this deponent observed to the commodore, that, as long as that light was hoisted, the ships would fire: upon which commodore Decatur ordered it to be taken down." To counteract the mischievous tendency of Mr. Bowie's averment about the harmless fire of the Pomone, commodore Decatur wrote from New-York a supplementary letter, commencing: "I omitted to state, that a considerable number of my killed and wounded was from the fire of the Pomone." The one shot that entered on the larboard side might, to be sure, have killed and wounded a few men; but then, says, or rather swears, Mr. Bowie, "the men were all, just then, down below taking care of their bags." Oh! Mr. Bowie, Mr. Bowie, you were but half an American; and no wonder we do not find your name among the officers belonging to the United States' navy in April, 1815.

Although commodore Decatur's first official is a very long one, and contains a great many inaccuracies, we shall notice only two paragraphs. One is: "I remained with her (the Endymion) in this position for half an hour, in the hope that she would close with us on our broadside, in which case I had prepared my crew to board; but, from his continuing to yaw his ship to maintain his position, it became

1815.

Com-
mo-
dore
Deca-
tur's
official
letter.

1815. evident, that to close was not his intention." The other: "It is with emotions of pride I bear testimony to the gallantry and steadiness of every officer and man I had the honour to command on this occasion; and I feel satisfied that the fact of their having beaten a force equal to themselves, in the presence, and almost under the guns, of so vastly a superior force, when, too, it was almost self-evident that, whatever their exertions might be, they must ultimately be captured, will be taken as evidence of what they would have performed, had the force opposed to them been in any degree equal."

An im-
portant
mi-
state-
ment in
com-
mo-
dore
De-
catur's
letter.

Passing over the illiberal insinuation cast upon a gallant british officer, upon one especially, who, as the commodore acknowledges, paid every attention to himself and his officers, "that delicacy and humanity could dictate," by the words, "it became evident, that to close was not his intention," we come to an inquiry into the fact, of whether or not commodore Decatur did intend "to board" the Endymion. An extract or two from his own letter will, we think, establish the point. He states, that at 8 h. 30 m. the President "completely succeeded in dismantling her," the Endymion, whom he had previously shown to be on his lee quarter; and yet that it was not until 11 p. m. that "two fresh ships of the enemy came up." What was to have prevented commodore Decatur, had such been his intention, from boarding the Endymion during this long interval? The truth is, such an idea never entered his head, until some one, after the affair was over, pointed out to him what a chance he had missed of distinguishing himself. Admitting that commodore Decatur had succeeded in capturing the Endymion, of which there is a very strong doubt, by boarding, he would, it is true, have been able to hold possession for only a quarter of an hour or 20 minutes. Still he would have had all the credit of the thing; and the subsequent capture of the President and recapture of the Endymion, by a force so overwhelming as that

which was approaching, would not, in the slightest degree, have detracted from his merit. 1815.

Although the President did not inflict upon the Endymion above one-fourth of the numerical loss which she herself sustained; although, while the latter did not have a single warrant-officer touched, the former had three lieutenants killed, and her master and two midshipmen wounded; although the hull of the british ship was very little struck, and that of the President was shattered from stem to stern; although, in short, very little injury was done to the Endymion more than her own active crew replaced in less than an hour, still the President had "beaten" the Endymion. When commodore Decatur was writing his official letter, he had been two days on board the Endymion, and had found time enough to discover, that her wounded men occupied "the starboard side of the gundeck from the cabin bulkhead to the mainmast;" and yet he had the hardihood to declare to his government and the world, that the Endymion, the ship he had so "beaten," was equal in force to the President.

An-
other
mi-
state-
ment.

On the 17th of April a court of inquiry was summoned at New-York, to investigate the circumstances under which the President had been captured. After what has already appeared in these pages on the subject of american courts of inquiry, after captain Joseph Bainbridge could be honourably acquitted for the manner in which he gave up the Frolic, we cannot be surprised that the court should decree, that the "Endymion was subdued," that the "proposition to board her" was "heroic," and that commodore Decatur "evinced great judgment and skill, perfect coolness, the most determined resolution and heroic courage," and so forth.

Court

tur.

1815. nesses to which he afterwards resorted, have sunk the name of Decatur, in the opinion of every well-informed European, quite as low as that of Rodgers, Bainbridge, or Porter. The case of the *Eudymion* and *President* has been compared with that of the *Eurotas* and *Clorinde*.* Both the french and the american frigate, it is true, were about equally battered in hull; but there was this difference in the conduct of their commanders: captain Denis-Lagarde, when he surrendered, had only his foremast standing; whereas commodore Decatur had all his three royal-masts an-end, and even the sails set upon them.

Reason
of our
appa-
rent
severi-
ty in
com-
ment-
ing
upon
the
mi-
state-
ments
of the
Ameri-
cans.

If we have been, or shall again be, a little more severe upon the Americans, generally, than accords with the impartial character of these pages, they have themselves, and themselves only, to thank. Have they not been trying to persuade the rest of the world, that their naval officers and seamen surpass all others; that they are, in short, "invincible"? Who has ever heard an American acknowledge, that any ship of his was taken by an equal force? Where can an American be found, who will not persist in declaring, that an equal force captured the *Guerrière*, *Macedonian*, and *Java*, the *Frolic*, *Peacock*, and their sister-brigs? One fact is remarkable. Where the Americans have met a decidedly superior force, or an equal force that routed them about in an unexpected manner, they have invariably dropped their crests, and have lost the respect of their conquerors by the tameness of their surrender.

Capt.
Hope's
letter.

It would be an injustice to captain Hope, not to notice the peculiar modesty of his official letter. He speaks of the cool and determined bravery of his officers and ship's company on the "fortunate occasion;" says, truly, that, "where every individual had so conspicuously done his duty, it would be injustice to particularize;" and, in proof of the exertions and abilities of his men, appeals to "the loss

* See p. 394.

and damages sustained by the enemy's frigate." 1815.
 In his letter to rear-admiral Hotham, enclosing that Feb.
 of captain Hope, captain Hayes does ample justice
 to the *Endymion*; confirms every statement in her
 log-extract, which is the groundwork of our account;
 and emphatically adds: "When the effect produced
 by her well-directed fire upon the *President* is wit-
 nessed, it cannot be doubted, that captain Hope
 would have succeeded either in capturing or sinking
 her, had none of the squadron been in sight." The
 senior lieutenant on board the *Endymion*, William
 Thomas Morgan, was deservedly promoted to the
 rank of commander.

On the 8th of March, after having undergone a
 partial repair, the *President*, accompanied by the
Endymion, sailed from Bermuda for England; and
 on the 28th both ships arrived at Spithead. The
President, of course, was added to the british navy;
 but her serious damages in the action, coupled with
 the length of time she had been in service, prevented
 her from being of any greater utility, than that of
 affording to Englishmen, many of whom, till then,
 had been the dupes of their transatlantic "brethren,"
 ocular demonstration of the "equal force" by which
 their frigates had been captured.

On the 26th of February the british schooner
St.-Lawrence, of 12 carronades, 12-pounders, and one
 long 9-pounder, commanded by lieutenant Henry
 Cranmer Gordon, while proceeding with despatches
 from rear-admiral Cockburn, relating to the peace
 between Great Britain and the United States, fell
 in with the american privateer-brig *Chasseur*, of six
 long 9-pounders, and eight carronades, 18-pounders,
 commanded by captain Thomas Boyle. The brig
 attacked the schooner, and an engagement ensued;
 which, the Americans state, lasted at close quarters
 only 15 minutes, when the *St.-Lawrence* was carried
 by boarding. No british official account has been
 published; but unofficial accounts state, that the
 action continued much longer.

The *St.-Lawrence* was a good deal cut up; and,

1815. according to a New Providence paper, lost out of her crew (exclusive of some passengers) of 42 men and nine boys, six men killed and 18 wounded. The Americans made the killed, as they generally do, much greater. The Chasseur was also injured in her hull and spars; and lost, by the american returns, out of a complement of 115 men, five men killed and eight wounded. Men are not in the best trim for fighting, just upon receiving the news of peace. Sailors are then dwelling upon their discharge from servitude, the sight of long absent friends, and all the ties of their homes and families. But even that, although it perhaps contributed to weaken the efforts, could not impair the courage, of the crew of the St.-Lawrence: they defended her, until nearly half their numbers were killed or wounded.

Newcastle and Acasta anchor in Cape Cod bay. The british force stationed in Boston bay in the beginning of December, 1814, consisted of the 50-gun ship Newcastle, captain lord George Stuart, 18-pounder 40-gun frigate Acasta, captain Alexander Robert Kerr, and 18-gun brig-sloop Arab, captain Henry Jane. On the 11th, when this squadron was cruising off St.-George's shoals, the Newcastle parted company, to reconnoitre the road of Boston. On the 12th lord George discovered lying there the 44-gun frigate Constitution, captain Charles Stewart, in apparent readiness for sea, and the Independance 74, with her lower yards and topmasts struck. The Newcastle then steered for Cape Cod bay; where, in a few hours, after having grounded for a short time on a shoal, she came to an anchor. On the 13th one of her men, from a boat sent on shore, deserted to the Americans. On the 16th the Acasta arrived, and anchored near the Newcastle.

Constitution escapes from Boston. On the 17th, having ascertained, in all probability from the Newcastle's deserter, that the two blockading frigates were not in a situation to offer him any annoyance, captain Stewart put to sea. The Constitution stood across the Atlantic to the coast of Spain and Portugal, and cruised for some time off the rock

Damage,
&c. on
each
side.

of Lisbon. In the latter end of January, or beginning of February, captain Stewart stretched over to the Western isles, and was tracked and followed by the british 38-gun frigate Tiber, captain James Richard Dacres. The latter boarded two or three neutral vessels, which had been boarded by the american frigate only a few hours before. At one time, it appears, the Constitution actually got a sight of the Tiber, but did not shorten sail, because captain Stewart, as he is said to have subsequently admitted, thought it probable that the ship was the Eurotas, or some other of the newly fitted 24-pounder frigates, detached in pursuit of him.

1813.

Gains a sight of Tiber, but avoids her.

On the 20th of February, at 1 P. M., the island of Madeira bearing west-south-west, distant 60 leagues, the Constitution, steering to the south-west with a light breeze from the eastward, discovered, about two points on her larboard bow, and immediately hauled up for, the british 22-gun ship Cyane,* captain Gordon Thomas Falcon, standing close hauled on the starboard tack, and about 10 miles to-windward of her consort, the 20-gun ship Levant, (18 carronades, 32-pounders, and two nines,) captain and senior officer the honourable George Douglas. At 1 h. 45 m. the Constitution got sight of the Levant, then bearing right ahead of her. At 4 P. M., having stood on to ascertain the character of the stranger, the Cyane made the private signal; and, finding it not answered, bore up for her consort, with the signal flying for an enemy. The Constitution immediately made all sail in chase, and at 5 P. M. commenced firing her larboard bow guns, but ceased soon afterwards, finding her shot fall short. At 5 h. 30 m., the Cyane having arrived within hail of the Levant, captain Douglas expressed to captain Gordon his resolution to engage the enemy's frigate, (known from previous information to be the Constitution,) notwithstanding her superior force, in the hope, by disabling her, to save two valuable convoys, that had

Falls in with Levant and Cyane.

* For her force see vol. v. p. 253.

1815. sailed from Gibraltar a few days previous in company with the two british ships.

Constitution
attacks
Cyane,
then
Levant.

At 5h. 45 m. p. m. the Levant and Cyane made all sail upon a wind, in order to try for the weathergage. In 10 minutes, finding they could not accomplish their object, the two ships bore up, with the view of delaying the commencement of the action until night; when they might hope, by skilful manœuvring, to engage with more advantage. The superior sailing of the Constitution defeating that plan also, the Levant and Cyane, at 6 p. m., hauled to the wind on the starboard tack, formed in head and stern line, at the distance of rather less than 200 yards apart. At 6 h. 5 m. the Constitution, all three ships having previously hoisted their colours, opened her larboard broadside upon the Cyane, at the distance of about three quarters of a mile on the latter's weather beam. The Cyane promptly returned the fire; but her shot, being all fired from carronades, fell short, while the frigate's long 24-pounders were producing their full effect. In 15 minutes the Constitution ranged ahead, and became engaged in the same manner with the Levant. The Cyane now luffed up for the larboard quarter of the Constitution: whereupon the latter, backing astern, was enabled to pour into the Cyane her whole broadside.

Re-
attacks
Cyane.

Meanwhile the Levant had bore up, to wear round and assist her consort. The Constitution thereupon filled, shot ahead, and gave the Levant two stern rakes. Seeing this, the Cyane, although without a brace or bowline except the larboard fore brace, wore, and gallantly stood between the Levant and Constitution. The latter then promptly wore, and raked the Cyane astern. The Cyane immediately luffed up as well as she could, and fired her larboard broadside at the starboard bow of the Constitution. The latter soon afterwards ranged up on the larboard quarter of the Cyane, within hail, and was about to pour in her starboard broadside; when, at 6 h. 50 m. p. m., having had most of her standing and running rigging cut to pieces, her main and mizen masts left in a tottering state,

and other principal spars wounded, several shot in the hull, nine or ten between wind and water, five carronades disabled, chiefly by the drawing of the bolts and starting of the chocks, and the *Levant* being two miles to-leeward, still bearing away to repair her heavy damages, the *Cyane* fired a lee gun, and hoisted a light as a signal of submission. 1815.
Cyane
surren-
ders.

It was not until 8 P. M. that the *Constitution*, having manned her prize and refitted some slight damages in her own rigging, was ready to bear up after the *Levant*, then in sight to-leeward. At 8 h. 15 m., which was as soon as the *Levant* had rove new braces, the gallant little ship again hauled her wind, as well to ascertain the fate of her companion, as to renew the desperate contest. On approaching the *Constitution* and *Cyane*, the *Levant*, with a boldness bordering on rashness, ranged close alongside the *Constitution* to-leeward, being unable to weather her; and at 8 h. 30 m. these two ships, (the *President* and *Little-Belt* over again,) while passing on opposite tacks, exchanged broadsides. The *Constitution* immediately wore under the *Levant*'s stern, and raked her with a second broadside. At 9 h. 30 m., finding that the *Cyane* had undoubtedly surrendered, captain Douglas again put before the wind; but, in the act of doing so, the *Levant* received several raking broadsides, had her wheel shot away, and her lower masts badly wounded. To fire her stern-chase guns, and steer at the same time, was impossible, owing to a sad mistake in the construction of this new class of vessel. Seeing the *Constitution* ranging up on her larboard quarter, the *Levant*, at 10 h. 30 m. P. M., struck her colours. Also
Levant.

Out of her 115 men and 16 boys, the *Levant* had six seamen and marines killed, one officer and 15 seamen and marines wounded; and the *Cyane*, out of her 145 men and 26 boys, (making 42 boys between these two small ships!) had six seamen and marines killed and 13 wounded; total, 12 killed and 29 wounded. The *Constitution* had sailed on her last cruise with a complement of 477 men and three Loss on
each
side.

1815. boys, but, having manned a prize with an officer and
 Feb. seven men, had on board only 469. Out of this
 number, she had six killed and mortally wounded and
 six others wounded severely and slightly. The
 wounded are rather out of proportion, but they are
 all that the Americans have acknowledged. The
 comparatively slight loss inflicted upon the two ships
 affords a clear proof, that the Americans had begun
 to relax in their gunnery; and, had the war con-
 tinued, and the United States gone on equipping
 and manning new ships, some very unexpected
 reverses at sea would have followed.

Capt.
 Stew-
 art's
 mi-
 state-
 ments.

The captain of an american frigate, who could
 solemnly declare, that a british frigate had run away
 from him, would naturally make a great boast of
 capturing these two sloops, as they may be called.
 Therefore captain Stewart officially says: "Con-
 sidering the advantages derived by the enemy, from
 a divided and more active force, as also their supe-
 riority in the weight and number of guns, I deem the
 speedy and decisive result of this action the strongest
 assurance which can be given the government, that
 all under my command did their duty, and gallantly
 supported the reputation of american seamen." The
 term "speedy" may appear misapplied when, accord-
 ing to the "Minutes" published in the american papers,
 the action began at 6h. 5m. and ended at 10 P.M., or,
 as the british account states, at 10h. 40m.; but, by a
 mode of reckoning peculiar to himself, captain Stewart
 declares, that the action lasted only 40 minutes.

A sup-
 positi-
 tious
 case,
 show-
 ing
 how
 the
 Ameri-
 cans
 should
 have
 behav-
 ed on
 this
 occa-
 sion.

Let us suppose that the Peacock and Hornet,
 soon after leaving New-York together, had fallen
 in with the Endymion, to-windward of them, and
 (the only improbable part of the supposition) had
 staid to engage the frigate until they were captured.
 How would the american citizens have behaved on
 this occasion? Why, they would have received
 captains Warrington and Biddle precisely as they
 did captain Stewart, and published accounts in every
 paper of the "heroic defence against decidedly
 superior force;" not failing to point out, as they did

in the *Essex's* action, the great disparity between carronades and long guns, when the ship carrying the latter has the choice of distance. Mr. Madison, too, in his next speech to congress, would have declared, that the two little sloops continued the unequal contest, until, as he said of the *Essex*, "humanity tore down the colours which valour had nailed to the mast." How would captain Hope have behaved? He would have told a plain tale of his good fortune, applauding the american commanders for having so long maintained a contest, in which, from the nature of their armament, and from their leeward position, they could not have hoped to succeed.

Before we attend to the further proceedings of the Constitution, we will dismiss all we have to state on the subject of her action with the two sloops. On the 28th of June a court-martial was held on board the *Akbar* at Halifax, Nova-Scotia, to try the two captains and their respective officers and ships' companies for the loss of the *Levant* and *Cyane*. They were all, except three seamen of the *Cyane* who deserted to the Americans, most honourably acquitted for the surrender of their ships, and justly applauded for the gallant defence they had made, against an enemy's ship so decidedly superior. With the exception of the three deserters, the two crews resisted the repeated offers made to them to enlist with the enemy. It was stated by the british officers, at the court-martial, that the crews of the two ships were, for three weeks, kept constantly in the Constitution's hold, with both hands and legs in irons, and there allowed but three pints of water during the 24 hours. This, too, in a tropical climate! It was further proved that, after the expiration of the three weeks, upon the application of captain Douglas, one third of the men were allowed to be on deck four hours out of the 24, but had not the means of walking, being still in irons; that, on mustering the crews when they were landed at Maranham, five of

1815.

Court-martial on captains Douglas and Falcon, &c.

1815. the *Levant's* boys were missing ; that, upon application and search for them, two were found locked up in the cabin of the american captain of marines ; and that a black man at Maranham was employed as a crimp, and enticed one of the *Levant's* boys to enter the american service.

Constitution
and
her
prizes
anchor
in
Porto-
Praya.

On the 8th of March the *Constitution*, having in company, along with her two prizes, a merchant brig of which she intended to make a cartel, anchored off the isle of Mayo, one of the Cape de Verds ; and on the next day got under way, and anchored, a few hours afterwards, in the harbour of Porto-Praya, island of Saint-Jago. While on his way to these islands, captain Stewart had caused the *Cyane* to be painted so as to resemble a 36-gun frigate. The object of this was to aggrandize his exploit, in the wondering eyes of the gaping citizens of Boston ; not one in a hundred of whom, he knew, would trouble themselves to inquire any further on the subject. The american captain would doubtless have played off the same *deceptio visus* upon the *Levant*, had he not been aware, that no efforts of the painter could make a low flush ship of 464 tons resemble a frigate. On the 11th, at 15 minutes past noon, just as captain Stewart had sent his master to bring the cartel brig under the stern of the *Constitution*, in order that the prisoners might be removed to her, three strange ships were discovered through the haze, standing into the harbour. These were the british 50-gun ships *Leander* and *Newcastle*, captains sir George Ralph Collier, K. C. B. and lord George Stuart, and 18-pounder 40-gun frigate *Acasta*, captain Alexander Robert Kerr. We will now step back for a moment, and endeavour to show what had brought these three ships to a spot so distant from the station on which they had hitherto been cruising, the north-eastern coast of the United States.

Leander
sails
from

On the 19th of December the *Leander* sailed from Halifax bound off Boston, and on the 24th fell in with the *Newcastle* and *Acasta*. By their captains,

it appears, sir George was informed, that the Constitution had sailed from Boston, and the Congress from Portsmouth, New-Hampshire, and that the President was to join those ships "from the Delaware."^{*} Unfortunately, although it had been stated over and over again in the Halifax papers, neither of the three captains appears to have been aware, that the Congress had, some months before, been dismantled and laid up at Portsmouth, and that the President was not lying in the "Delaware," but in New-York. On turning to the Newcastle's log, to see who it was that had been playing off such a hoax upon lord George, we find that, on the 22d, while the Newcastle and Acasta were lying at anchor in Cape Cod bay,† the 18-gun brig-sloop Arab, captain, Henry Jane, joined company, "with intelligence that the Constitution had sailed from Boston on the 17th instant." Not another word is there. This, however, was quite enough to hasten the two ships in getting under way, and to make their captains wish, no doubt, that they had kept under way in front of the port which they had been ordered to watch.

This story about the sailing of the american squadron, whether derived, in the first instance, from fishermen, cattle-dealers, or any other of the cunning New-England folk, was credited by sir George Collier; and away went the Leander, Newcastle, and Acasta, in search of the Constitution and the "two other heavy frigates" that had sailed "in her company."[‡] On the 4th of January, when off the Western Isles, the three ships fell in with a brig-prize belonging to the american privateer Perry; and, having chased under american colours, were taken for an american squadron. The consequence was, that the prize-master of the brig voluntarily came on board the Leander, and pretended to take that ship for the President, the Newcastle for the Constitution, and

1815. the *Acasta*, not for the Congress, but for the Macedonian. In short, the fellow would have said or sworn any thing, that he thought would ingratiate himself with his hearers. Mr. Marshall says, "Nothing could have happened better"* than this farcical interview with the american privateer's-man. On the contrary, looking to the serious impression it appears to have made on board the *Leander*, we should rather say, nothing could have happened worse.

chases
them
to sea.

On the 11th of March, at 0 h. 15 m. P. M., when, as already stated, they first discovered the *Constitution*, *Cyane*, *Levant*, and cartel brig, the three british ships were standing close hauled on the starboard tack, with a moderate breeze from the north-east by north; and the ships in *Porto-Praya* then bore from the *Leander*, the leewardmost ship of her squadron, north-east by north distant seven miles. In less than 10 minutes after she had discovered the approach of the british ships, the *Constitution* cut her cables and stood out of *Porto-Praya* on the larboard tack, followed by the *Levant* and *Cyane*. At 1 P. M., just as the *Constitution* had got upon the *Leander*'s weather beam, the three british ships tacked in chase. At this time the strange squadron was about four miles in the wind's eye of the *Acasta*, the *Acasta* about one mile upon the weather quarter of the *Newcastle*, and the *Newcastle* about two miles ahead of the *Leander*. At this time, also, the *Acasta* made out the strangers to be "one large frigate and two sloops." The *Newcastle* has merely noted down in her log, that one ship was larger than the others; and the *Leander*, in her log, describes all three of the ships as "apparently frigates." But the *Leander*'s first lieutenant on the occasion, the present captain John M'Dougall, has subsequently stated as follows: "Weather very thick and hazy; took the two sternmost ships for

* Marshall, vol. ii. p. 534.

frigates, the headmost, from appearance a much larger ship, for the *Guerrière* ; who, we understood, had long 32-pounders on her main deck."* 1815.
March.

At 1 h. 30 m. P. M. captain Stewart found that the Constitution sailed about equal with the ships on her lee quarter, but that the *Acasta*, by luffing up, was gaining her wake and rather dropping astern. It was at the same time observed, that the *Cyane* was dropping astern and to-leeward, and would soon be overtaken by the *Acasta*. At 1 h. 40 m., therefore, captain Stewart made the signal for the *Cyane* to tack ; expecting that the british commodore would detach a ship in pursuit of her, and that she would succeed in reaching the anchorage of Porto-Praya before the detached ship could come up with her ; or, if no ship chased, that she would be able to double the rear of the british squadron and escape before the wind. The *Cyane*, just when bearing from the *Leander* north-north-east distant four miles, tacked accordingly ; but no british ship tacked after her, sir George rightly judging that she would reach the neutral port before either of the british ships could get within shot of her. The *Cyane* shortly afterwards bore away, and was seen no more. At 1 h. 45 m. the *Leander* hoisted her colours and fired a gun to-windward ; and then telegraphed that, in case of parting company, the Isle of Mayo was to be the rendezvous. Both the *Leander's* consorts also hoisted their colours, and the Newcastle scaled her guns. The Constitution's log notices the circumstance thus : " The ship on our lee quarter firing broadsides by divisions, her shot falling short of us." An officer of the Constitution, in a letter to a friend, says : " The shot fell short from 100 to 200 yards."† This would, indeed, have brought the ships near together ; but the american officer must have greatly underrated the distance. For our part, we cannot see the necessity of scaling Cyane
tacks

likely to calm the breeze, already beginning to
slacken as the day drew towards its close.

Levant
tacks
and all
three
british
ships
tack
after
her. At 2 h. 30 m. p. m., the Constitution having dropped
the Levant considerably, the situation of the latter,
in reference to the Acasta, became as critical as that
of the Cyane had been. Captain Stewart accordingly
made the Levant's signal to tack; and the Levant
did immediately tack. At this time, says the Acasta,
"the frigate had gained on us, but we had gained
on the sloop." One of the Constitution's officers
gives a different statement from that in the Acasta's
log. He says: "The Acasta sailed faster than
the Constitution, and was gaining on her."* At all
events the Acasta, although she might drop a little
astern, was weathering upon the Constitution, and
had now brought her to bear upon her weather
cat-head. The instant the Levant tacked, the
Leander made a signal, the nature of which we
shall discuss presently; and, in obedience to that
signal, the Acasta "tacked in chase of the sloop."
In a minute or two afterwards, according to statements
that have appeared in print, the Leander and New-
castle successively did the same. When the New-
castle tacked, the Constitution was five or six miles
to-windward of her, and, "in the prevailing haze,
nearly out of sight" from the deck of the Leander:
from whom the Newcastle then bore south-east by
east, and the Acasta north-east.

Bears

Porto-
Praya,
is fired
at and
cap-
tured. At 2 h. 50 m. p. m., which was just 14 minutes after
she had tacked, the Newcastle lost sight of the
Constitution, owing to the increased haziness of the
weather as the former approached the land, and the
opposite course steered by the latter. The Levant,
shortly after she had tacked, bore away for Porto-
Praya road, and at about 3 h. 15 m. p. m. received
from the Leander in passing an ineffectual fire.
"At 4 h. 30 m.," says the Newcastle log, "saw her

* Naval Monument, p. 182.

(Levant) anchor. Acasta fired a broadside. At 4 h. ^{1815.} 56 m. tacked and fired our larboard broadside." An ^{March.} american account says: "The Levant ran into port, so as to run her jib-boom over the battery. The Acasta and Newcastle came in, and, although her colours were hauled down, fired at her a number of times. They were obliged to hoist and lower their colours twice; yet not a gun was fired from the Levant. Lieutenant Ballard, who commanded, had ordered his men to lie on the deck, by which they all escaped injury, although considerable damage was done to the town. It seemed unnecessary for two heavy frigates to fire into one sloop of war, who neither did nor could make any resistance."* When the Leander opened her fire she discovered, clearly enough, the force of the ship in pursuit of which the squadron had tacked. Sir George then made the signal for the Acasta to take possession of her. The Acasta did so; and, by 5 P.M., all three british ships had anchored in Porto-Praya road. On the 12th, at 6 h. 30 m. A.M., sir George Collier went on shore to communicate with the governor, in consequence of the damage done to the houses of the town by the shot from the Acasta and Newcastle. At 11 A.M. sir George returned; and shortly afterwards the british squadron, accompanied by the prize, got under way, and steered for the West Indies. We must now pay a visit to the Constitution.

Indies

The moment he saw how the Acasta was weathering him, and that he had no chance of escape by bearing up, as the Newcastle would inevitably intercept him, captain Stewart considered the Constitution as within an hour or two of becoming a british prize. The American officers now questioned the british officers as to the manner in which the commodore of the chasing squadron would treat them; and, in short, began making, in regard to their clothes and other personal effects, such arrangements as they thought necessary,

* Naval Monument, p. 182.

1815. in the change they were about to undergo from
 March. freemen to captives. All this while captains Douglas
 and Falcon and the late officers of the *Levant* and
Cyane were blessing their stars at the good fortune
 that awaited them, although, as we can readily con-
 ceive, their delicacy forbade them from making a
 display of it before captain Stewart and his officers.
 When the *Cyane* tacked, and the three british ships
 still continued in chase of the *Constitution*, not a
 doubt could remain that the english commodore,
 whoever he might be, was determined to have her.
 The *Levant* tacks; and (can it be possible?) all
 three british ships tack after her. Here is a change!

State of The joy of captain Stewart and his officers was now
 feeling on as extravagant as their fears had been well grounded.
 board But what were *now* the feelings of captains Douglas
 Consti- and Falcon and the other british officers? What
 tution were they indeed! "The british officers on board,"
 when says the *Constitution's* officer, "who had expressed
 british ships the utmost confidence that the *Constitution* would be
 gave over taken in an hour, felt the greatest vexation and dis-
 the chase appointment, which they expressed in very emphatic
 of her. terms."* From the following passage in the same
 account, it would appear that some one of the british
 officers, to save as much as possible the credit of
 the service to which he belonged, pretended to under-
 stand the purport of a signal that was hoisted by
 the *Newcastle*, and of which we shall speak pre-
 sently. Thus: "After the other ships tacked, the
Newcastle made a signal that her foretopsail yard
 was sprung, and tacked also." In less than three
 quarters of an hour after the *Newcastle* had tacked
 from her, the *Constitution* was becalmed or nearly so.
 As soon as a breeze sprang up, captain Stewart
 steered towards the coast of Brazil, and through the
 West Indies home; and, early in the month of May,
 "lucky Old Ironsides," as now she well might be
 called, anchored in Boston.

She
 arrives
 at
 Boston

* Naval Monument, p. 182.

The three british ships, on being first discovered by the Constitution, were taken by the american officers for what, in reality, they were: the Leander and Newcastle for "ships of the line," or two-deckers, and the Acasta for a frigate. But the Cyane, according to her log, made out all three ships to be frigates, even before the Constitution cut her cables and made sail.* Yet, on board the Leander, the Constitution, of 1533, the Cyane of 539, and the Levant, a flush ship, of 464 tons, all put on the appearance of "frigates." Hence, when the Cyane tacked, "sir George directed the Acasta's signal to be made to tack after her, but countermanded the order, on observing that she would gain the anchorage before the Acasta could close with her."† It was, therefore, the respect which the british commanding officer paid to the neutrality of the portuguese port, that permitted the Cyane to go unpursued. But, in less than an hour, a second enemy's "frigate," the Levant, tacks, and the neutrality of the port does not save her from being pursued, or from being cannonaded, "with her jib-boom over the battery," by two of the three british ships that had tacked after her. How does captain M'Dougall reconcile this?

1815.
March.
Opini-
on
formed
by each
party
of the
force
of his
enemy.

It appears, now, that it was not sir George's intention that all three british ships should have tacked after the Levant. The signal was ordered to be for the Acasta alone to tack; but, according to the published letter of Mr. Thomas Collier, "the midshipman, Mr. Morrison, whose duty it was to make the signal, did, by mistake, hoist the general signal," or, according to another statement, and one which bears the signature of the Leander's late first lieutenant, "in making the signal, the Acasta's distinguishing pendants got foul, and, before they could be cleared, the Newcastle

1815. **mistook it for a general signal.*** It is a point, we conceive, of very little consequence how the mistake arose. The fact is that, of all the three ships, the *Acasta* was the last that should have been ordered to tack after the *Levant*, even admitting that ship to have been the "*Constitution*, *President*, *Macedonian*, or *Congress*," simply because the *Acasta* was "*weathering*," "*getting into the wake of*," and the likeliest of any of the three to overtake and bring to action, the "*Guerrière*." On the other hand, that the *Leander* herself, if any ship did, was the most proper to have gone in pursuit of the supposed *Constitution*, *President*, *Macedonian*, or *Congress*, is clear; first, because she was "*falling to-leeward*" of the supposed *Guerrière*, and next, because she was the nearest of any of her squadron to the ship that, to the *Leander* at least, put on so fatal a disguise. Had we seen no other statement than is to be found in the three british ships' logs, we should consider that the *Leander* really did tack first; for thus says her log: "*Tacked ship to cut off ship from anchorage, and made signal for ditto.*"

Leander tacked also by the suggestion of her first lieutenant. Sir George Collier was remarkable for the kindness with which he treated his officers, and for the, in this instance, most unfortunate, deference he was in the habit of paying to their opinions on points of service. By whose suggestion he tacked, let his late first lieutenant's own words determine: "*When the Acasta had filled on the starboard tack, I observed to sir George, that, if the ships standing in shore were really frigates, which it was impossible to ascertain, owing to the haziness of the weather, they would be more than a match for the Acasta. He replied: 'It is true, Kerr can do wonders, but not impossibilities; and I believe I must go round, as, when the ship that tacked first hears the Acasta engaged, she will naturally come to her consort's assistance.'*"† Captain M'Dougall here says "it was impos-

* Marshall, vol. ii. p. 537.

† Ibid. p. 539.

sible to ascertain" whether or not a low flush ship, of 464 tons, sailing for more than an hour, at the distance certainly not of more than five miles, upon the weather beam of the Leander, and consequently with her whole broadside exposed to view, and every port, one might suppose, as easy to be counted, as the ports of the Leander herself were by the british and american officers on board the Levant, was a "frigate;" and such a frigate as, with another like her, it would be "impossible" for the Acasta to cope with. Lieutenant Henry Richmond, who was a midshipman on board the Leander, appears to have sanctioned Mr. Thomas Collier in saying, that "all on board" the Leander fully believed that the Constitution, Cyane, and Levant were three american frigates. The only answer we shall give to this will be to subjoin the names of the five lieutenants, who belonged to the Leander at the time. 1st. John M'Dougall, 2d. William Edward Fiott, 3d. Robert Graham Dunlop, 4th. George William St. John Mildmay, and 5th. Richard Weld. We believe it is not yet admitted by captains Kerr and lord George Stuart, that the Acasta was the first ship that tacked, or that the weather, at the time the Constitution was left to go her ways, was not sufficiently clear for the water-lines of all the ships to be seen.

1815.
March.

Names
of Le-
ander's
lieu-
tenants.

Mention has been made of an optional flag. The following extract from the work of a contemporary will afford the requisite information on the subject: "Sir George Collier, confiding in the zeal and judgment of the captains under his orders, had previously informed them that, whenever a certain flag was hoisted with any signal addressed to either of them, they were at liberty to disregard the signal, if they considered that, by following the order conveyed thereby, the object in view was not so likely to be attained, as by acting in contrariety thereto. The flag alluded to was entered pro tempore in the signal books under the designation of the 'optional flag.' On its being hoisted with the Newcastle's

Re-
marks

onal
flag."

1815. pendants as above stated, that ship made answer by
 March. signal, 'The flags are not distinguishable.'* We shall not stay to discuss this point, beyond suggesting the probability, either that the wrong flag was hoisted on board the Leander, or that it had got foul and was omitted to be cleared. If neither was the case, the Newcastle must have been nearer to the Constitution than she was to the Leander; for we observe by her log, that the Newcastle could distinguish the signal made by the Constitution to the Cyane, as being one not in the british naval code, also that the signal afterwards made by the Constitution to the Levant was "the same signal as before." We have now a word or two to submit on the part performed by the Acasta.

Advantages possessed by Acasta. In two respects, the Acasta possessed a decided advantage over her consorts. She was far more advanced in the chase, and sailed better on a wind, than either of them; and she had, from the first, made out exactly the force of the three strange ships: they were, according to her log, "one large frigate and two sloops." We believe, also, that the "large frigate" was all along supposed by her to be the Constitution. When the Acasta saw the signal made by the commodore, so far to-leeward, for the squadron to tack, how happened it that no signal was made in answer, expressive of the probability that some mistake had been made, in supposing that the two ships which had tacked were worth a moment's consideration, and communicating, that the ship which they were all anxious to get hold of was ahead, and that she, the Acasta, was weathering her? Or, let us suppose that the Acasta had taken no notice of the Leander's signal, but had kept on her course, captain Kerr, if we mistake not, had an honourable wound,† which would have served him for an excuse, as a similar wound, and on a similar occasion, had once served the greatest naval captain of the age.

* Marshall, vol. ii. p. 537, note †.

† See vol. i. p. 145.

"Leave off action? Now d—n me if I do! You 1815.
know, Foley, I have only one eye,—I have a right March.
to be blind sometimes."*

On the subject of the "optional flag," in reference Extract
to the *Acasta*, we shall quote from a contemporary: from
"The *Acasta*'s log informs us, that the enemy's force Mr.
was discovered to consist of one large frigate and two Mar-
sloops, so early as 1 P. M., the time when the british shall's
squadron first tacked to the eastward. If so, we work.
are sorry that a signal to that effect was not made,
by which sir George Collier's mind would have been
set at ease as to the capability of the *Acasta* to cope
with the two ships which had put back; and the
Leander, having nothing else to engage her atten-
tion, would of course have continued in pursuit
of the other. It is very natural for junior captains
to feel a delicacy in addressing signals to their com-
manding officer when in presence of an enemy; but,
as sir George Collier had formed his opinion of the
american's force from the report of captain Kerr
and lord George Stuart,† he certainly could not
have taken offence had he been informed that the
Acasta alone was more than capable of annihilating
the two ships which she had tacked after."‡

One part of this statement we consider quite Con-
nugatory. What would have been the utility of cluding
the *Leander*, a ship confessedly "falling to-lee- re-
ward," continuing in pursuit of the *Constitution*? marks.
No, the only ship, that could have pursued her with
any chance of success, had been ordered by the
Leander to tack from her. Most sincerely do we
regret, on personal, as well as on public grounds,
that this last and most triumphant escape of the
Constitution, the first frigate of the United States
that had humbled the proud flag of Britain, had not,
long ago, been brought under the scrutiny of a
court-martial. The blame would then have fallen

* See vol. iii. p. 104.

1815. where it ought to have fallen ; and, in the unpleasant task of detailing, what, the more it is investigated, the more it will show itself to be, the most blundering piece of business recorded in these six volumes, we should neither have had our statements called in question nor our motives misunderstood.

Hornet
hears
of the
peace
and
falls in
with
Penguin.

On the 20th of January, six days after the President and store-brig Macedonian had escaped from New-York, the Peacock, Hornet, and store-brig Tom-Bowline succeeded also in getting to sea. On the 23d the Hornet parted company from her two consorts, and proceeded straight to the island of Tristan-d'Acunha, the first rendezvous for the squadron. On the 20th of March captain Biddle was informed of the peace by a neutral ; and on the 23d, at 11 A. M., when just about to anchor off the north end of the above island, the Hornet fell in with the british brig-sloop Penguin, of 16 carronades, 32-pounders and two sixes, captain James Dickinson.

New
mode
in
which
Hornet
was
fitted.

Before narrating the action that ensued, it will, we consider, prove useful to point out a few of the circumstances under which the parties met. The armament of the Hornet has already, on more than one occasion, been shown :* she now carried, in lieu of her two long twelves, two long 18-pounders ; and, as these, owing to their great length, could not conveniently be fought through the foremost or usual long-gun ports, they were mounted amidships. She had musketoons in all her tops, each piece throwing 50 buck-shot at a discharge, and upon each quarter a 3 or 4 pound brass swivel, fitted on a chock. All this had been done to bring the Hornet nearer to an "equality" with the Loup-Cervier, in case the challenge, to which we have already alluded, had been accepted. Her crew, consisting at this time of 165 men, (eight absent in a prize,) had also, it may be presumed, been well culled preparatory to the

* See p. 275.

expected contest. Each man had a boarding-helmet, similar to those we described as worn by the crew of the Constitution,* ^{1815.}

The Penguin was commissioned, for the first time, in November, 1813; and, as a proof how much brigs of her class were wanted in the british navy, there were but 81 in commission on the 1st of the succeeding January. After having been run up by the contract-builder in the usual slight and hurried manner, to be ready on the emergency, (there being, as already stated, no more than 81 such vessels in commission,) the Penguin was to be manned with equal recklessness about consequences. In respect to captain and officers generally, the Penguin might compete with any brig of her class; but, as to men, when she did get them all on board, which was not until June, 1814, they were, with the exception, probably, of not being disaffected, a worse crew than even the Epervier's. Her 17 boys, poor little fellows, might do very well six or seven years to come. Her men, her misnamed "british seamen," consisted, except a portion of her petty officers, of very old and very young individuals; the latter, pressed men, the former discharged ineffectives. Among the whole number, thus obtained, 12 only had ever been in action.

One might suppose, that a vessel so "manned," especially after a knowledge of the fact, that four of the same description of sloops had been captured, each by an american sloop of the same nominal, whatever may have been her real, force, would have been sent to escort some convoy from the Downs along the english coast; a service in which, as against the pickaroons that usually infested the Channel, the appearance of a force was almost as effective as its reality. Oh, no. The aforesaid emergency required, that the Penguin should be sent to the Cape of Good Hope, to traverse the very track in

* See p. 476.

1815. which the Java had met, and been captured by, the Constitution. Accordingly, in the month of September, the Penguin sailed for her distant destination. While on the Cape station, she lost several of her men by sickness; and, previously to her being despatched by vice-admiral Charles Tyler, the commander in chief at the Cape, in pursuit of the american privateer ship, Young-Wasp, the Penguin received on board from the Medway 74, as a loan for that special service, 12 marines: thus making her complement 105 men and 17 boys, or 122 in the whole.

Probable behaviour of captain Biddle had Penguin been a ship-sloop.

Had the vessel in sight to-windward been rigged with three masts instead of two, and had she, on her near approach, proved by her signals to be a british cruiser, captain Biddle would have marked her down in his log as a "frigate," and have made off with all the canvass he could spread. Had the ship, nevertheless, overtaken the Hornet, and been, in reality, a trifle superior in force to her, captain Biddle, we have no doubt, would have exhausted his eloquence in lauding the blessings of peace, before he tried the effect of his artillery in a struggle for the honours of war. However, the vessel approaching was evidently a brig; and the utmost extent of a brig-sloop's force was thoroughly known.

Penguin chases Hornet and action commences

When she first descried the Hornet in the north-west by west, the Penguin was steering to the eastward, with the wind fresh from the south-south-west. With all the promptitude that was to be expected from the gallant first lieutenant of the Cerberus in the action off Lissa, captain Dickinson bore up in chase. At 1 h. 45 m. P. M., Tristan d'Acunha bearing south-west distant three or four miles, the Penguin hoisted her colours, a St.-George's ensign, and fired a gun, to induce the stranger to show hers. The Hornet immediately luffed up on the starboard tack, hoisted american colours, and discharged her broadside; and the Penguin, on rounding to upon the same tack, fired hers in return. Thus the action commenced, within about pistol-

shot distance. The Hornet's star and bar shot soon reduced the Penguin's rigging to a state of disorder; and a tolerably well-directed discharge of round and grape, meeting no adequate return, especially as the carronades, owing to their insecure mode of mounting, turned half round almost every time they were discharged, made a sensible impression upon the Penguin's hull. At 2 h. 15 m. p. m., as the Penguin drifted nearer, the Hornet bore away, with the semblance of retiring from the contest, but in reality to take a more favourable position for doing execution with her gunnery. Captain Dickinson, on this, bore up with the intention to board. Before, however, this gallant officer could put his plan into execution, he received a mortal wound. 1815.

Lieutenant James M'Donald, who now succeeded to the command, aware of the brig's disabled state, saw that the only chance of success was to attempt his captain's measure. Accordingly, at 2 h. 25 m., the Penguin ran her bowsprit between the Hornet's main and mizen rigging on the starboard side. The heavy swell lifting the ship ahead, the brig's bowsprit, after carrying away the Hornet's mizen shroud, stern-davits, and spanker-boom, broke in two, and the foremast went at the same moment, falling in-board directly upon the foremost and waist guns on the larboard or engaged side. These guns becoming, in consequence, completely disabled, and the after guns being equally so from the drawing of the breeching-bolts, an attempt was made to bring a fresh broadside to bear; but the Penguin was in too unmanageable a state to be got round. In this dilemma no alternative remained; and at 2 h. 35 m. p. m. lieutenant M'Donald hailed to say, that the Penguin surrendered. After a lapse of 25 minutes, an officer from the Hornet came on board to take possession. Death of capt. Dickinson.

Out of a crew, as already stated, of 105 men and 17 boys, the Penguin lost her commander, boat-swain, and four seamen and marines killed, four Penguin tries to board but loses her foremast.

1815. others mortally wounded, and her second lieutenant, (John Elwin, very severely,) one master's mate, (John Holmes Boud,) one midshipman, (John Noyes, each of whom lost a leg,) purser's clerk, and 24 seamen and marines wounded, for the most part slightly. Even the Hornet was beginning to fall off in her gunnery. Most of the Penguin's men were wounded by musketry; and the bowsprit, and the foremast along with it, fell chiefly owing to the two vessels getting foul in the manner they did, while so heavy a sea was running.

Da-
mage
and
loss on
board
Hornet The Hornet received a few shot in the hull; one of which was so low down as to keep her men constantly at the pumps. Out of a crew of 163 men and two boys, the Hornet lost, by the acknowledgment of her officers, only two seamen killed and 11 wounded; but, according to the observation of the british officers, her loss was much greater. Just as Mr. Edward B. Kirk, one of the Penguin's midshipmen, and the very first prisoner that reached the Hornet, was stepping upon her deck, the crew were in the act of throwing a man overboard; but a struggle or convulsive twitch in the body occasioned his being hauled in again. The poor man's lower jaw had been nearly all shot away; yet he lived, and was walking about the deck in the course of a few days. This shows the hurry in which the american officers were, to get their killed out of the way before the arrival of the prisoners; and the time necessary to remove every appearance of blood and carnage contributed to the delay in sending for them. Even when the British did come on board, buckets of water were dashing about and brooms at work on all parts of the deck. The Penguin's second lieutenant counted 16 of the Hornet's men lying in their cots; and several of her men told some of their former shipmates, whom they discovered among the Penguin's crew, that the Hornet had 10 men killed by the first and second broadsides.

We cannot, with any consistency, offer the trifling

disparity of force in this action, as an excuse for the Penguin's capture. The chief cause is to be sought in that which cannot be made apparent in figures; the immense disparity between the two vessels in the fitting of their guns, and in the effectiveness of their crews. A ship's gun, cast adrift, not only becomes utterly useless as a weapon of offence or defence, but, in the very act of breaking loose, maims and disables the men stationed at it; and, if the sea is rough, as captain Biddle says it was in the present instance, continues to cause destruction among the crew, generally, until again lashed to the ship's side. How much is the evil increased, if, as in the Penguin's case, instead of one gun, several guns break loose. In the midst of all this delay and self-destruction, the enemy, uninterrupted in his operations, and animated by the feeble resistance he meets, quickens his fire; and, conquering at last, fails not to ascribe, solely to his skill and valour, that victory, which accident had partly gained for him.

1815.
Remarks
on this
action.

We are inclined to think that the prize was not so "riddled in her hull," as to render her destruction on the morning of the 25th a matter of necessity. The fact is, that, just after the action had ended, the Peacock and Tom-Bowline hove in sight; and captains Warrington and Biddle, having heard of the peace, were anxious to get to the East Indies as quickly as possible, in order to have their share of the few prizes yet to be taken.

Penguin
de-
stroyed

The communicativeness of one of the american officers having conveyed to the ears of lieutenant M'Donald the statement in captain Biddle's official letter, that the Hornet had suffered so slightly in the action, lieutenant M'Donald took an opportunity of mentioning the circumstance to the american captain; when, having drowned his native cunning in wine, (some of poor captain Dickinson's probably,) captain Biddle admitted the fact, but attempted to gloss it over by stating, that it was necessary to say so and so, and so and so, in order to

An im-
portant
secret
dis-
closed.

1815. to make the thing be properly received in the United States. Here was an acknowledgment! How unnecessary, then, have been all our previous labours in detecting and exposing the misrepresentations contained in the american official accounts. Of course, we are saved all further trouble in showing, how completely captain Biddle has mistated every important fact connected with the capture of the Penguin.

Pea- On the 28th of April, at daylight, in latitude 39° south, longitude 34° west, the Peacock and Hornet bore down upon, in order to capture as an indiaman, the british 74-gun ship Cornwallis, captain John Bayley, bearing the flag of rear-admiral sir George Burlton, K. C. B. The mistake was soon discovered, and a chase commenced, during which the Peacock separated to the eastward. In the afternoon the Cornwallis, when gaining fast upon the Hornet, had to heave to and lower a boat for a marine that had dropped overboard. This delay, aided by the unskilful firing of the Cornwallis on the following day, saved the Hornet; but the chase continued until 9 A. M. on the 30th, when the 74, finding further pursuit useless, shortened sail and hauled to the wind. The closeness of the chase, however, had effected enough to render the Hornet, as a cruiser, utterly useless. She hove overboard her guns, muskets, cutlasses, forge, bell, anchors, cables, shot, boats, spare spars, and a considerable portion of her ballast, and was of course obliged to steer straight for the United States.

Pea- The Peacock, after she had been compelled to part from her consort, pursued her way to the East Indies; and, on the 30th of June, being off Anjier in the Straits of Sunda, fell in with the honourable company's brig-cruiser Nautilus, of 10 carronades, 18-pounders, and four long nines, commanded by lieutenant Charles Boyce. On the Peacock's approach within hail, the lieutenant inquired if her captain knew that peace had been declared. Let

us suppose, for a moment, that, just as the american commander was listening to the hail from the Nautilus, the latter became suddenly transformed into the british 22-gun ship Volage, captain Joseph Drury, a sister-vessel to the Cyane, and at that time cruising in the East Indies. Captain Warrington would then have promptly hailed in turn, with the best speaking-trumpet in the ship; thanked captain Drury for his politeness, and been the first to urge the folly, not to say wickedness, of wounding and killing each other, while any doubt existed about peace having been signed. But it was a vessel he could almost hoist on board the Peacock. He therefore called out: "Haul down your colours instantly." This "reasonable demand" lieutenant Boyce very properly considered as an imperious and insulting mandate, and, fully alive to the dignity of the british flag, and to the honour of the service to which he was acknowledged to be an ornament, prepared to cope with a ship, whose immense superiority, as she overshadowed his little bark, gave him nothing to expect short of a speedy annihilation.

1815.
June.

Desires
her to
strike.

It will scarcely be credited that, about a quarter of an hour before this, Mr. Bartlett, the master of the Nautilus, and cornet White, one of her passengers, in one boat, and Mr. Macgregor, the master-attendant at Anjier, in another, had gone on board the Peacock, in a friendly way, to communicate the news of peace. Scarcely had Mr. Bartlett stepped upon the american ship's deck than, without being allowed to ask a question, he was hurried below. Happily, Mr. Macgregor met with rather better success. The instant he arrived on board, he communicated to the Peacock's first lieutenant, the most authentic information of peace having been concluded between Great Britain and America, grounded on no less authority than Mr. Madison's proclamation; which Mr. Macgregor had himself received from an american ship, passing the Straits on her way to China. What effect had this communication?

Capt.
War-
rington
is in-
formed
again
of the
peace.

1815. Captain Warrington, whom the single word "Peace!" ought to have made pause, before he proceeded to spill the blood of his fellow-creatures, ordered Mr. Macgregor to be taken below.

The fact established, altho' not admitted by him.

He attacks Nautilus, and compels her to surrender.

Her heavy loss on the occasion.

Captain Warrington does not admit that Mr. Macgregor mentioned that peace existed; although the latter gentleman has sworn that he did, both to captain Warrington's first lieutenant and to his purser. As to the imputed silence of messieurs Bartlett and White, would two officers, who had voluntarily entered on board the ship of a nation, with whom they knew a peace had just been concluded, have acted in so senseless a manner as to suffer themselves to be made prisoners, without some such words as, "Peace is signed," bursting from their lips? Even the ceremony of gagging, however quickly performed, could not have stopped an exclamation, which their personal liberty, and every thing that was dear to them as men, would prompt them to utter. The same motives would have operated upon the two boats' crews; and there cannot be a doubt, that they all gave some sort of intimation, that peace had been signed. But captain Warrington, as the Peacock's purser could not help saying, wanted to have a little brush with the british brig. He saw what a diminutive vessel she was, and, accordingly, ordered his men to fire into her. They did so; and the Nautilus was soon compelled to haul down her colours. But this the brig did not do until her gallant commander was most dangerously wounded, one seaman, two european invalids, and three lascars killed, her first lieutenant, (mortally,) two seamen, and five lascars wounded. The wound of lieutenant Boyce was of a most serious description. A grape-shot, that measured two inches and one-third in diameter, entered at the outside of his hip, and passed out close under the backbone. This severe wound did not, however, disable him. In a few minutes a 32-pound shot struck obliquely on his right knee, shattering the joint, splintering the leg-

bone downwards and the thighbone a great way upwards. This, as may be supposed, laid the young officer prostrate on the deck. The dismounting of a bow gun, and four or five men wounded, appears to have been the extent of the injury sustained by the Peacock. 1815.

Fearful that these facts would come to light, captain Warrington had additional reasons for endeavouring to lessen the enormity of his offence, by stating, in his official letter, that "lascars" were the only sufferers. Poor wretches! and were they to be butchered with impunity, because their complexion and the american captain's were of different hues? Whose heart was the blackest, the transaction in which they lost their lives has already shown to the world. Had the Volage, as we said before, been the vessel that had hove in sight, every man in the Peacock, in less than three minutes after the master-attendant at Anjier and the other british officers had come on board, would have been informed of the peace. Captain Warrington would have approached the stranger, if he approached at all, without opening his ports or displaying his helmets. In short, he that hectored so much in one case, would have cringed as much in the other; and the commander of the United States' sloop Peacock would have run no risk of being by his government "blamed for ceasing," or rather, for not commencing, "hostilities, without more authentic evidence that peace had been concluded."

The first lieutenant of the Nautilus, Mr. Mayston, languished until the 3d of December, a period of five months, when a mortification of his wound carried him off. About a fortnight after the action, lieutenant Boyce suffered amputation very near his hip, on account of the length and complication of the fracture. The pain and danger of the operation was augmented by the proximity of the grape-shot wound. His life was subsequently despaired of; but, after a long course of hopes and fears to his

1815. numerous friends, this brave and amiable young man (or what captain Warrington had left him) survived.

Capt. Warrington's shameful behaviour towards him in his dreadfully wounded state. Of course, the american captain, who had himself escaped unhurt, the moment he was informed of the casualties on board his prize, either visited, or sent a condoling message to, her dreadfully mangled commander? Reader, he did neither. Captain Warrington, in the words of the poor sufferer, in his memorial to the court of directors, "proved himself totally destitute of fellow-feeling and commiseration; for, during the time he retained possession of the Nautilus," which was until 2 P. M. on the 1st of July, "he was not once moved to make a commonplace inquiry after the memorialist, in his then deplorable condition." No wonder, that, throughout civilized India, the perpetrator of this atrocious act is looked upon as a barbarian: let but the requisite publicity be given to the case of the Nautilus and Peacock, and the name of Warrington will be held in equal detestation throughout the civilized world.

STATE OF THE BRITISH NAVY.

THE totals, in the two "ordinary" columns of the 1816. present abstract, decisively show the peaceable state of the navy at the beginning of the year 1816;* and the totals, generally, differ but slightly from those of the abstract for the year in which the war had commenced.† The number of commissioned officers and masters, belonging to the british navy at the beginning of the present year, was,

Officers
of the
british
navy.

Admirals	67
Vice-admirals	68
Rear-admirals	75
" superannuated	32
Post-captains	851
" " superannuated	36
Commanders or sloop captains . .	812
" superannuated	80
Lieutenants	4064
Masters	693

And the number of seamen and marines, voted for the service of the same year, was 33000.‡

Having brought to a close the wars of civilized nations, we have now to record the particulars of a short but decisive war carried on against barbarians. Partly to settle some differences with the regencies of Algiers, Tunis, and Tripoli, and partly, no doubt, to astonish Europe with the extent of their naval force, the United States, the moment peace with England permitted them, sent forth, in separate divisions, as fast as the ships could be got ready, nearly the whole of their Atlantic or sea navy. On

American
expedition
to
Algiers

* See Appendix, Annual Abstract No. 24.

† For the lists of casualties usually introduced in this place, see Appendix Nos. 14, 15, 16, and 17.

‡ See Appendix, No. 18.

1816. the 17th of June, off Cape de Gatte, the first division, consisting of three frigates and three smaller vessels, under commodore Decatur, in the new 32-pounder 44-gun frigate *Guerrière*, after a running fight, by one account, of 25 minutes, and by another account, of nearly two hours, captured the algerine 18-pounder 40-gun frigate *Mezoura*. Mr. Madison, in his speech to congress delivered on the 5th of December, when referring to this "demonstration of american skill and prowess," says, "The high character of the american commander was brilliantly sustained on the occasion." With examples of this sort from the head of the government, no wonder that the people of the United States are such unconscionable braggarts.

Ame-
rican
treaty
with
Algiers
&c.

The american squadron also drove on shore near St.-Xavier a small frigate or corvette. On the 30th commodore Decatur concluded a treaty with the dey of Algiers; by which all prisoners made on either side were to be restored, and all property given up, and no more tribute was to be demanded from the United States. The algerine prisoners on board the squadron of commodore Decatur amounted to 500, and the natives of the United States in the hands of the dey did not exceed 10: consequently his highness did not, in that respect, make a bad bargain. The american commodore afterwards sailed for Tunis and Tripoli, and obtained from those regencies payment of the few thousand dollars in dispute between the latter and some american citizens. In the case of Tripoli, 10 danish and neapolitan captives were given up by the bey, in lieu of a portion of the stipulated sum. In his letter to the american secretary of state, commodore Decatur had the modesty to say, that the treaty he had concluded "placed the United States on higher ground than any other nation."* One of the officers of his squadron concludes a letter to a friend with the

* Naval Monument, p. 299.

following piece of pleasantry: "You have no idea ^{1816.} of the respect which the american character has ^{July.} gained by our late wars. The Spaniards, especially, think we are devils incarnate: as we beat the English who beat the French, who beat them, whom nobody ever beat before; and the Algerines, whom the devil himself could not beat."*

On the 23d of May, at Bona, near Algiers, the crews of between 300 and 400 small vessels engaged in the coral-fishery, while on their way to celebrate mass, (it being Ascension day,) were barbarously massacred by a band of 2000 turkish, levantine, and moorish troops. These atrocities committed on defenceless Christians having at length roused the vengeance of Britain, an expedition, of a suitable magnitude, was prepared to act against the forts and shipping of Algiers, and the command was intrusted to a most able officer, admiral lord Exmouth; who had already, a short time before, compelled the dey of Tunis to sign a treaty for the abolition of christian slavery, and to restore 1792 slaves to freedom.

British
expedition
to
Algiers

On the 28th of July, at noon, a fleet, consisting of the following 19 men of war, also a naval transport, a sloop with ordnance stores, and a despatch-vessel, weighed from Plymouth Sound with a fine northerly wind:

Fleet sails from Falmouth and arrives at Gibraltar. At 5 P. M., when the fleet was off Falmouth, captain Paterson was ordered to hasten on to Gibraltar, to have every thing in readiness against the arrival of the expedition. On the 9th of August, at 2 P. M., lord Exmouth anchored with his fleet in Gibraltar bay, and found lying there, along with the Minden, which had arrived only on the preceding night at 11, the following dutch squadron :

gun-frig.			
		{ Melampus	{ vice-adm. baron T. Van De Cappellen.
		{ Frederica	{ captain Antony-Willem De-Man.
	40	{ Diana	" Jakob-Adrian Van-der-Straaten.
		{ Amstel	" Petrus Zievogel.
		{ Dageraad	" Willelm-Augustus Vanderbart.
	30		" Johannes-Martinus Polders.
gun-corr.			
	18	Eendrragt	" Johan.-Fred.-Chr. Wardenburg.

Dutch admiral joins the expedition. Immediately on being apprized of the object of the expedition, vice-admiral Van de Cappellen solicited and obtained leave to cooperate in the attack with his frigate-squadron. No time was lost by lord Exmouth in sending on shore all articles of useless lumber and in getting on board fresh supplies of provisions and ordnance stores, it being the admiral's intention to sail on the 12th. On the 11th, however, a strong levanter set in ; and, continuing over the 12th, kept the fleet from moving.

Lord Exmouth's plan of teaching his men gunnery. Owing to the highly commendable regulations put in force by lord Exmouth, an unusual proportion of powder and shot had been expended by the fleet since its departure from England. Every Tuesday and Friday the signal was made for the fleet to prepare for action ; when each ship, according to

directions previously given, fired six broadsides. ^{1816.}
 Besides this general exercise, the first and second ^{Aug.}
 captains of the Queen-Charlotte's guns were daily
 trained at a target made of laths, three feet square;
 in the centre of which was suspended a piece of
 wood of the shape and size of a bottle, with yarns
 crossed at right angles, so that a 12-pound shot
 could not pass through the interstices without cutting
 a yarn. This target was hung at the foretopmast
 studdingsail-boom, which was rigged out for the
 purpose; and it was fired at from abreast of the
 admiral's skylight on the quarterdeck. By the time
 the fleet reached Gibraltar, the target was never
 missed, and the average number of bottles hit daily
 was 10 out of 14. The confidence this gave to the
 ship's company was unbounded; and, of their ex-
 pertness against stone walls and living targets, we
 shall soon have to display the terrible effects.

On the 13th the 18-gun brig-sloop Satellite, cap- ^{Fleet}
 tain James Murray, arrived from Algiers; and on ^{sails}
 this day every captain in the fleet received a plan of ^{from}
 the fortifications of the place, with full instructions ^{Gib-}
 as to the intended position of his ship. On the 14th, ^{raltar.}
 early in the forenoon, the wind having shifted to
 the southward, the dutch squadron, and the whole
 british fleet, except the Jasper sent to England with
 despatches, and the Saracen left behind, consisting
 altogether of 23 ships and brigs, five gun-boats, and
 an ordnance sloop, fitted as an explosion-vessel
 under the personal direction of lieutenant Richard
 Howell Fleming, of the Queen-Charlotte, (who was
 to have the command of her,) and major Gossett of
 the corps of miners, weighed and stood into the
 Mediterranean. On the 16th, early in the afternoon,
 just as the fleet had got within 200 miles of Al-
 giers, the wind shifted to the eastward; and in the
 evening the ship-sloop Prometheus, captain William
 Bateman Dashwood, joined company direct from the
 port, having on board the wife, daughter, and infant-
 child of the british consul, Mr. M'Donell. The two

1816. former, disguised in midshipmen's clothes, had with
 Aug. great difficulty been brought off; but, owing to the treachery of Mrs. M'Donell's jew-nurse,* the infant, while on its way to the boat concealed in a basket, was detained by order of the dey: as were also the surgeon of the *Prometheus*, three midshipmen, and the remainder of the crews of two boats, consisting in all of 18 persons. "The child," says lord Exmouth, "was sent off next morning by the dey; and, as a solitary instance of his humanity, it ought to be recorded by me." The consul himself was put in irons and confined in a small room on the ground-floor of his house; nor could the most urgent remonstrances on the part of captain Dashwood induce the dey to release his prisoners.

Defensive
 preparations
 of the
 Algerines.

Strength
 of their
 batteries.

Captain Dashwood confirmed all that the admiral had previously learnt about the preparations making by the Algerines to resist his attack; of which they had received intelligence, chiefly, as was suspected, from the french 40-gun frigate *Ciotat*, then at anchor in the bay. It appeared, also, that about 40000 men had been marched down from the interior, and all the janisaries called in from the distant garrisons. The ships, consisting of four frigates, mounting 44 guns each, five large corvettes, mounting from 24 to 30 guns, and between 30 and 40 gun and mortar boats, were all in port. The fortifications of Algiers, for so small a place, were of considerable strength. Upon the various batteries on the north side of the city, including a battery over the north gate, were mounted about 80 pieces of cannon and six or eight enormous mortars; but the shoalness of the water would scarcely admit a heavy ship to approach within reach of them. Between the north wall of the city and the commencement of the pier which is about

* Upon the authority of Mr. Abraham Salan  in his very interesting "Narrative of the Expedition to Algiers," p. 15, note. but, according to lord Exmouth, owing to the infant crying in the gateway, although the surgeon had administered something to compose it.

250 yards in length, and connects the town with the lighthouse, were about 20 more guns, the greater part of them similarly circumstanced. At the north projection of the mole stood a semicircular battery, of two tiers of guns, about 44 in all; and to the southward of that, and nearly in a line with the pier, was the round or lighthouse battery, of three tiers of guns, 48 in all. Then came a long battery, also of three tiers, called the eastern battery, mounting 66 guns. This was flanked by four other batteries, of two tiers each, mounting altogether 60 guns; and on the south head of the mole were two large guns, represented to be 68-pounders and nearly 20 feet long. So that the different batteries on the mole mounted at least 220 guns; consisting, except in the case just mentioned, of 32, 24, and 18 pounders. South-west of the small pier that projects from the city to form the entrance of the mole, or harbour, and bearing, at the distance of about 300 yards, due west from the south mole-head, was the fish-market battery, of 15 guns, in three tiers. Between that and the southern extremity of the city, were two batteries of four or five guns each. Beyond the city, in this direction, was a castle and two or three other batteries, mounting between them 60 or 70 guns. Besides all the batteries we have enumerated, and which constituted the sea-defences of the port, there were various others at the back of the city, and on the heights in its environs: indeed, the whole of the guns mounted for the defence of the city of Algiers, on its sea and land frontiers, are represented to have exceeded 1000.

Having to beat against a head wind until towards midnight on the 24th, when it shifted to south-west, the fleet did not make Cape Cazzina, a high promontory about 55 miles to the westward of Algiers, of the bay of which it forms the northern point, until noon on the 26th; nor gain a sight of the city until daybreak on the 27th. The ships at this time lying nearly becalmed, lord Exmouth took the opportunity

to the
dey.

1816. of despatching lieutenant Samuel Burgess, in one of
 Aug. the Queen-Charlotte's boats, towed by the Severn,
 to demand of the dey certain conditions, of which
 the following is the substance. The abolition of
 christian slavery; the delivery of all christian slaves
 in the kingdom of Algiers; the repayment of all
 the money that had recently been exacted for the
 redemption of neapolitan and sardinian slaves; peace
 with the king of the Netherlands; and the immediate
 liberation of the british consul and the two boats'
 crews of the Prometheus. At 9 A. M., the calm
 retarding the progress of the frigate, the boat, by
 signal from the Queen-Charlotte, pulled for the
 shore, carrying a flag of truce. At 11 A. M., on
 arriving opposite to the mole, the boat was met by
 one from the shore, in which was the captain of the
 port. The demand was presented, and an answer
 promised in two hours. Meanwhile, a breeze having
 sprung up from the sea, the fleet stood into the bay,
 and lay to about a mile from the city.

Ships
 take
 their
 sta-
 tions
 before
 the
 batte-
 ries
 and
 action
 com-
 mences

At 2 P. M., no answer returning, lieutenant Burgess
 hoisted the signal to that effect, and pulled out
 towards the Severn. The Queen-Charlotte imme-
 diately asked, by signal, if all the ships were ready.
 Almost at the same moment every ship had the
 affirmative flag at her mast-head, and the fleet bore
 up to the attack in the prescribed order. At 2 h.
 35 m. P. M. the Queen-Charlotte anchored with springs
 about 50 yards from the mole-head. Just as the
 british three-decker was in the act of lashing herself
 to the mainmast of an algerine brig fast to the shore
 at the mouth of the mole or harbour, and towards
 which lord Exmouth had directed his ship to be
 steered as the guide for her position, a shot was
 fired at the Queen-Charlotte; and almost at the
 same instant two other shot were fired from the
 opposite end of the mole at the Impregnable and
 ships near her, as they were advancing to their
 stations. Scarcely had these three guns been dis-
 charged, when lord Exmouth, with characteristic

humanity, waved his hand to a crowd of 200 or 300 soldiers and artillerymen, standing on the parapet of the mole, surveying the immense floating body so near to them. As the greater part of these were in the act of leaping through the embrasures into the lower battery, the Queen-Charlotte opened her starboard broadside. Thus the action commenced, each british ship taking a part in it the instant she could bring her guns to bear.

Next ahead of the Queen-Charlotte, or rather upon her larboard bow, lay the Leander, with her after guns on the starboard side bearing into the mouth of the mole and her foremost ones upon the fish-market battery. Ahead of the Leander lay the Severn, with the whole of her starboard guns bearing on the fish-market battery. Close to the Severn was the Glasgow, with her larboard guns bearing on the town batteries. In the rear of the Queen-Charlotte, inclining towards her starboard quarter, at the distance of about 250 yards, and within a very few of her allotted station, was the Superb, with her starboard broadside bearing upon the 60-gun battery, next to that on the mole-head. Close astern of the Superb, in a north-easterly direction, the Impregnable and Albion were to have taken their stations in line ahead; but, not being sufficiently advanced when the firing commenced, the Impregnable was obliged to bring to considerably outside, not only of her proper station, but of the line of bearing (about south-east from the south angle of the eastern battery) within which the attacking force had been ordered to assemble. The Impregnable thus lay exposed, at the distance of about 400 yards, as well to the lighthouse battery of three tiers, towards which she soon sprang her starboard broadside, as to the eastern battery of two tiers. Observing what an open space there was between the Impregnable and her second ahead, the Superb, the Minden stood on and took up a position about her own length astern of the latter.

line.

1814.
Aug.

The Albion, following, brought up, at first, close ahead of the Impregnable; but, finding herself too near to the three-decker, she filled, and at about 3 P. M. came to again, within her own length of the Minden. The latter, quickly passing her stream-cable out of the larboard gun-room port to the Albion's bow, hove the two ships close together. In this way the eight heaviest ships of the fleet took their stations; the Queen-Charlotte, Superb, Minden, Albion, and Impregnable, from the mole-head in a north-easterly direction, and the Leander, Severn, and Glasgow, from the fish-market battery in a curved direction to the south-west.

Sta-
tions
of the
dutch
frigates

The station assigned to the dutch squadron was against the batteries to the southward of the city, and it appears to have been the intention of the dutch admiral to place the Melampus in the centre of his five frigates; but the Diana's captain, not understanding exactly the orders given to him, did not go far enough to the northward. Seeing this, the baron gallantly pushed the Melampus past the Diana, and at about 3 P. M. anchored his frigate with her jib-boom over the taffrail of the Glasgow. The Diana and Dageraad anchored successively astern of their admiral. The two remaining dutch frigates anchored further out; and the corvette Eendragt, as she had been directed, kept under way.

Of the
Grani-
cus,
Hebrus,
&c.

The Granicus and Hebrus frigates and the smaller vessels (except the bombs) being considered in the light of a corps de reserve, had not had any particular stations assigned to them, but were to bring up abreast of any openings they could find in the line of battle. Impelled onward by the ardent desire of filling the first of these openings, the Hebrus got becalmed by the heavy cannonade, and was obliged to anchor a little without the line, on the Queen-Charlotte's larboard quarter. The Granicus, finding herself shooting fast ahead, hove to, with the intention of waiting until her companions had taken their stations. As, owing to the dense smoke which pre-

veiled, nothing beyond the distance of a cable's length could be seen, except the Queen-Charlotte's masthead flag, captain Wise allowed 10 minutes to elapse for the ships to anchor. The Granicus then filled, let fall her foresail, set topgallantsails, and, soon gaining fresh way, steered straight for a beacon that, phoenix-like, seemed to live in the hottest of the fire. With a display of intrepidity and of seamanship alike unsurpassed, captain Wise anchored his frigate in a space scarcely exceeding her own length between the Queen-Charlotte and Superb; a station of which a three-decked line of battle ship might justly have been proud.

The different sloops attached to the squadron also took their posts; the Heron, Britomart, Prometheus, and Cordelia remaining under way, and the Mutine anchoring on the larboard bow of the Impregnable. The four bomb-vessels were soon in their stations, at the distance of about 2000 yards from the enemy's works, and began their destructive discharges; as did also the battering flotilla, commanded by captain Frederick Thomas Michell, consisting of gun-boats, mortar-boats, launches with carronades, rocket-boats, barges, and yawls, in number 55.

Such was the precision and destructive effect of the Queen-Charlotte's fire, that her third broadside levelled the south end of the mole to its foundation: she then sprang her broadside, until it bore upon the batteries over the town-gate leading into the mole. Here gun after gun came tumbling over the battlements; and, when the last gun fell, which was just as the artillerymen were in the act of discharging it, one of the algerine chiefs leaped upon the ruined parapet, and shook his drawn scymitar at the ship, whose fatally pointed cannon had so quickly demolished that which, by its brave defenders at least, had been considered impregnable.

The excellent position of, and the animated fire kept up by, the Leander very soon cut to pieces the

1816. The
outer
alge-
rine
frigate
set on
fire. algerine gun-boats and row-gallies; whereby their intention of boarding the nearest british ships was entirely frustrated. Towards 4 p. m. the *Leander*, by orders from the admiral, ceased firing, to allow the algerine frigate moored across the mole, at the distance of about 100 yards from the *Queen-Charlotte*, to be set on fire. Accordingly, the flag-ship's barge, under the command of lieutenant Peter Richards, assisted by major Gossett, of the corps of miners, lieutenant of marines Ambrose A. R. Wolrige, and midshipman Henry M'Clintock, proceeded to execute that service. A gallant young midshipman, Aaron Stark Symes, in rocket-boat No. 8, "although," as lord Exmouth says, "forbidden, was led by his ardent spirit, to follow in support of the barge." His boat, being flat-bottomed, could not keep pace with the barge, and became exposed, in consequence, to a cannonade that wounded himself, and killed his brother-officer and nine of the boat's crew. In about 10 minutes, lieutenant Richards in the barge succeeded in boarding and setting fire to the algerine frigate, and returned from the enterprise with the loss of only two men killed. The blaze was in a manner electrical; and lord Exmouth testified his approbation, by telegraphing to the fleet, "Infallible."

Dis-
abled
state of
Im-
preg-
nable. At 4 h. 15 m. p. m., the algerine frigate in flames drifting out towards the *Queen-Charlotte*, the latter shifted her birth to let the vessel pass. At 4 h. 24 m. rear-admiral Milne sent a message to the commander in chief, communicating, that the *Impregnable* had sustained a loss of 150 in killed and wounded. (including a third of the number by the bursting of a shell from the enemy's works,) and requesting that a frigate might be sent to divert some of the fire from the ship. The *Glasgow* was immediately ordered upon that service; but, the wind having fallen in consequence of the heavy firing, she was unable to do more than take up, after the lapse of nearly three quarters of an hour, a somewhat better

position for annoyance than her former one. Here, a short distance ahead of the Severn, with her stern now towards that ship, the Glasgow became exposed to a severe raking fire from the fish-market and contiguous batteries; which dismounted two of her quarterdeck carronades, and in a few minutes did her more serious injury than all she had previously suffered. At 7 p. m. the Leander, being greatly cut up by the fish-market battery and others on her starboard bow, ran out a hawser to the Severn and brought her broadside to bear upon them. About this time, by the incessant and well-directed fire of the mortar, gun, and rocket boats, all the ships and vessels within the harbour were burning. The flames subsequently communicated to the arsenal and storehouses on the mole; and the city also, in several parts, was set on fire by the shells from the bomb-vessels.

1816.
Aug.

All the
ships
in the
mole in
flames,
also
part of
city.

The ordnance-sloop, which, fitted as an explosion-vessel, had accompanied the expedition from Gibraltar, for the purpose of being sent against the ships in the mole, was now, as they were all destroyed, placed under the directions of rear-admiral Milne. Lieutenant Fleming, who during the action had been commanding with great credit a battering-boat stationed close under the stern of the Queen-Charlotte, proceeded, in company with major Reed of the engineers, to take command of the explosion-vessel, and to place her where an officer, sent by rear-admiral Milne, should point out. This officer was captain Herbert Bruce Powell, a volunteer serving on board the Impregnable. In a short time the sloop was run on shore, close under the semicircular battery to the northward of the lighthouse. There, at a few minutes past 9 p. m., the vessel exploded; and, having been charged with 143 barrels of powder, must have operated very successfully as a diversion in favour of the Impregnable.

Burst-
ing of
the ex-
plosion
vessel.

The whole of the ships kept up a tremendous fire

1816. upon the town and forts until about 10 P. M. ; when, the upper tiers of the batteries on the mole, being in a state of dilapidation, the fire from the lower tiers nearly silenced, and the ammunition of the attacking ships reduced to a very small quantity, the Queen-Charlotte cut her cables and springs, and stood out before a light air of wind, which, fortunately for the British, had just sprung up from the land. The remaining british ships, by the orders of the admiral, began cutting also ; but, owing to their disabled state, they made very slow progress, and the Leander, Superb, and Impregnable suffered much, in consequence, from the raking fire of a fort at the upper angle of the city. Before 2 A. M. on the 28th every british and dutch ship had come to out of reach of shot or shells, the algerine fleet and store-houses illuminating by their blaze the whole bay, and greatly assisting the former in picking an anchorage. As if to add to the awful grandeur of the scene, the elements began their war as soon as the ships and batteries had ended theirs. For nearly three hours the lightning and thunder were incessant, and the rain poured down in torrents. We are sensible that a diagram would have been particularly useful in this action, and had hoped to have been able to give one ; but, on consulting the logs, we found the positions of very few of the ships laid down with the requisite accuracy. Nor could we rely upon any of the few plans that have been published, having discovered mistakes in every one of them.

Loss on board the british fleet. Now for the account of casualties sustained on the part of the assailants. The Queen-Charlotte had seven seamen and one marine killed, three lieutenants (George Morison King, John Sampson Iago, and Frederick John Johnston, latter mortally,) one secretary to the admiral, (Joshua Grimes,) one captain of marine-artillery, (Charles Frederick Burton,) one lieutenant of marines, (Patrick Robertson,) her boatswain, (William Maxwell,) five midshipmen,

(George Markham, Henry Campbell, Edward Hibbert, Edward Stanley, and Robert Hood Baker,) ^{1816.}
 one secretary's clerk, (Samuel Colston,) 82 seamen, ^{Aug.}
 24 marines, two marine-artillery, five sappers and miners, and four boys wounded; Impregnable, one midshipman, (John Hawkins,) 37 seamen, 10 marines, and two boys killed, one master's mate, (George Nepean Wesley,) one midshipman, (Henry Quinn,) 111 seamen, 21 marines, nine sappers and miners, and 17 boys* wounded; Superb, one master's mate, (Thomas Howard,) one midshipman, (Robert C. Bowen,) three seamen, two marines, and one rocket-troop killed, her captain, (slightly,) three lieutenants, (Philip Thicknesse Horn, John M'Dougall, and George W. Gunning,) two midshipmen, (William Sweeting and John Hood Wolseley,) 62 seamen, 14 marines, and two marine-artillery wounded; Minden, five seamen and two marines killed, one master's mate, (Charles Calmady Dent,) one midshipman, (Charles G. Grubb,) 26 seamen, and nine marines wounded; Albion, one assistant-surveyor, (Thomas Mends,) one midshipman, (John Jardine,) and one seaman killed, her captain, (severely,) one midshipman, (John Harvey, mortally,) 10 seamen, and three marines wounded; Leander, one captain of marines, (James Willson,) one lieutenant of marines, (George Baxter,) three midshipmen, (— Lowdon, Richard Calthrop, and P. G. Hanwall,) 11 seamen, and one marine killed, two lieutenants, (Henry Walker and John Stewart Dixon,) five midshipmen, (Edward Aitchison, William Cole, Dawson Mayne, Henry Sturt, and George Dixon,) one clerk, (William W. Pickett,) 69 seamen, 25 marines, four boys, and 12

* An extraordinary number to suffer on board one ship. It is perhaps full as extraordinary that, out of a total of 210 persons killed and wounded, three only should be officers: this is partly accounted for by the havoc which the bursting of the shell caused among the sailors on the main or third deck; but the small proportion of officers, with even those 50 men deducted, is surprising.

1816. supernumeraries wounded; Severn, two seamen and one marine killed, five midshipmen, (James Foster, arm amputated, Charles Caley, William Ferror, Daniel M'Neale Beatty, and William A. Carter,) 25 seamen, three marines, and one boy wounded; the Glasgow, nine seamen and one marine killed, one lieutenant, (Edmund Williams Gilbert,) her master, (Robert Fulton,) one lieutenant of marines, (Althelston Stephens, five midshipmen, (John Duffell, George W. Harvey, Wynne Baird, George Henry Heathcote, and — Keay,) 25 seamen, three marines, and one boy wounded; Granicus, two lieutenants of marines, (William M. Morgan and William Rensfey,) one midshipman, (Robert Pratt,) nine seamen, one marine, one marine-artillery, and two boys killed, one lieutenant, (Henry Augustus Perkins,) four midshipmen, (Lewis Dunbar Mitchell, Lewis Tobias Jones, George R. Glennie, and Dacres Furlong Wise,) 31 seamen, three marines, two rocket-troop, and one boy wounded; Hebrus, one midshipman (George H. A. Pococke) and three seamen killed, one midshipman, (Aaron Sykes Symes,) 10 seamen, one marine, two rocket-troop, and one boy wounded; Infernal, one lieutenant of marine-artillery (John James P. Bissett) and one seaman killed, one lieutenant, (John Foreman,) her boatswain, (George Valentine,) clerk, (Matthew Hopkins,) three midshipmen, (James Barber, James M. Cross, and John H. Andrews,) eight seamen, one marine-artillery, and two boys wounded.

Loss on
board
dutch
squa-
dron.

None of the remaining three bomb-vessels, nor any of the sloops, appear to have incurred any loss. That sustained by the dutch squadron amounted to 13 killed and 52 wounded; making the total loss, on the part of the allies, 141 killed and 742 wounded. The following statement will show, along with the names of the first lieutenants (and of some of the others in the flag-ships) of the british ships, the individual loss sustained by the two squadrons, and the

quantity of powder and shot which each of the british 1816.
and dutch ships expended in the action. Aug.

The quantities marked with an asterisk are doubtful: Ammu-
the others are officially correct. The Impregnable, nition
it is understood, fired two shot at a time; which ex-
accounts for her expenditure so greatly exceeding that pended
of either of the other line-of-battle ships. The whole in the
quantity of powder and shot expended in the engage- action.
ment, according to Mr. Salamé's very interesting
narrative, was upwards of 500 tons of the latter, and
nearly 118 tons of the former. This includes, of course,
the quantity expended by the sloops, most of whom
fired when they could do so with effect. Mr. Salamé
states, also, that the number of 13 and 10 inch shells
thrown by the four bomb-vessels was 960.

Although none of the ships lost any spars, many,
particularly the Impregnable, Leander, Superb,

1816. Granicus, Glasgow, and Severn, had their masts much injured. In hull, also, these ships, the first two especially, were considerable sufferers. The Impregnable, indeed, is stated to have received 233 large shot in her hull; a great many of them between wind and water. One 18-pound shot entered the bulwark, passed through the heart of the mainmast, and went out at the opposite side. The loss in killed and wounded, on the part of the Algerines, amounted, as represented by some accounts, to 4000 men, and, by others, to nearly 7000.

Da-
mage
of the
ships.

As soon as daylight came, lord Exmouth despatched lieutenant Burgess with a flag of truce and a note to the dey, repeating the demands of the preceding forenoon; and the bombs were at the same time ordered to resume their positions, to be ready to renew the bombardment of the city in case of a non-compliance. The Algerine officer who came off to meet the boat, and who had been captain of one of the frigates that had been destroyed, declared that the answer had been sent on the preceding day, but that no boat was to be found to receive it. On this subject, Mr. Salamé says: "When we opened over the mole-head, I saw, as I thought, a boat coming out, which I supposed was that of the captain of the port, and told his lordship of it; but, on looking with a glass, we found the mistake."* The fact of the boat's departure was, however, confirmed by the captain of the port himself, when, in an hour or two afterwards, he came off with the Swedish consul, to acquaint the British admiral that all his terms would be agreed to.

Lord
Ex-
mouth
sends a
mes-
sage
to the
dey.

On the 29th, at 10 A. M., the captain of the port again came off, accompanied by Mr. M'Donell, the British consul. On the same afternoon captain Brisbane went on shore; and, by the aid of the interpreter, Mr. Salamé, a conference was had with the dey at his palace. Several other conferences

The

livers
up
chris-
tian
slaves,
signs a
treaty,
&c.

* Narrative of the Expedition to Algiers, &c. p. 37.

took place, in the three last of which rear-admiral 1816.
 sir Charles Vinicombe Penrose, who had arrived on Aug.
 the 29th in the 36-gun frigate Ister, was present;
 and the final result was, the delivery to the British
 of upwards of 1200 christian slaves, with an engage-
 ment (of no great value certainly) to abolish the
 practice of slave-making in future; the restoration
 of 382500 dollars for slaves redeemed by Naples
 and Sicily; peace with the king of the Netherlands;
 the payment of 30000 dollars to the british consul
 for the destruction of his effects, and a public
 apology to him, before the ministers and officers of
 the palace, in terms dictated by captain Brisbane,
 for the detention of his person. Having thus accom-
 plished, to the fullest extent, the object of his
 mission to Algiers, lord Exmouth, at midnight on the
 3d of September, weighed on his return, leaving
 the Prometheus to attend the british consul, and
 embark the few remaining slaves that were then on
 their way from the interior.

Lord
 Ex-
 mouth
 sails on
 his
 return.

Those only, who may not be aware to what a pitch Re-
 of extravagance the pretensions of the Americans have marks
 attained, will feel any surprise, that they should rank on the
 their performance at Algiers very little if at all below battle
 the glorious exploit we have just done narrating: and its
 as if the act of commodore Decatur, in exchanging result.
 500 algerine prisoners for 10 slaves, citizens of the
 United States, could be compared with the act of
 lord Exmouth; who, with cannon-balls only to give
 in exchange, obtained the freedom of, including the
 1792 given up to the admiral on his spring visit to
 the bay of Tunis,* upwards of 3000 slaves; not
 one of whom, as a proof how little of a selfish
 feeling had actuated the framers of the expedition,
 was a native of the british isles. The release of so
 many christian slaves from the iron fangs of bar-
 barians was, indeed, an act worthy of Britain; an
 act calculated to raise the character of her navy,

* See p. 571.

1816. high as it already stood, higher still in the estimation of the world. Nor will the triumph at Algiers pass to posterity, without the name of Exmouth, as the leader of the brave band by whose prowess it was gained.

Ho-
nours
and re-
wards
to the
con-
querors

For the skill and valour he had displayed in consummating this glorious achievement, lord Exmouth was created a viscount of the United Kingdom. Rear-admiral Milne, also, was made a knight-commander, and captains Ekins, Aylmer, Wise, Maitland, Paterson, and Coode, companions, of the Bath. All the lieutenants named in the list in the preceding page, and some others, including lieutenant Fleming who commanded the explosion-vessel, were promoted to the rank of commanders; and several of the master's mates and midshipmen obtained commissions as lieutenants.

Anec-
dote of
the
dutch
admi-
ral.

The dutch admiral behaved uncommonly well; and the following has been adduced as an instance of his self-possession in the heat of the battle. About an hour after the firing had commenced, a lieutenant of the Queen-Charlotte went on board the Melampus with a message from lord Exmouth. The baron himself attended the lieutenant to the gangway on his return, and rated the frigate's first lieutenant somewhat sharply, for his inattention in not having shipped the best man-ropes for the british officer's accommodation. Among the meritorious individuals concerned in the expedition, the interpreter must not be forgotten. The zeal, talent, and fidelity of Mr. Salamé appear to have merited all the praises officially bestowed upon him, as well by the commander in chief, as by the officers, rear-admiral Penrose and captain Brisbane, present at the conferences with the dey.

Mr. Sa-
lamé.

STATE OF THE BRITISH NAVY.

THE abstract for the year 1817* differs from all that have preceded it in the series, by the double arrangement of its classification, owing to the revival, by an order in council, of the ancient and only reasonable practice of rating the ships of the british navy; namely, according to the number of carriage-guns of every sort which they respectively mounted. The memorial from the board of admiralty to the prince regent, recommending the alteration, bears date November 25, 1816; and the order in council establishing the new ratings, according to the plan submitted, issued in the month of February, 1817. Although this memorial of the board of admiralty was not seen by us, until every abstract of the 28 was printed, and every note attached to them prepared, we find that we had anticipated nearly all the reasons urged by the board for the necessity of some amendment in the classification. The following are the two concluding paragraphs of this important memorial: "We trust that we shall be excused for observing to your royal highness, that it is wholly unworthy the character of the royal navy of this kingdom to maintain this system, which, though introduced by the accidental cause we have mentioned, and without any design of deception, yet may give occasion to foreign nations to accuse us of misrepresentation, when we state that a british frigate of 38 guns has taken a foreign frigate of 44, when in fact the british frigate was of equal, if not superior force. We therefore humbly recommend that your royal highness

New
rating
system

Ex-
tracts
from
the
order
in
council

* See Appendix, Annual Abstract No 25; also, in particular, the notes belonging to it.

1817 will be pleased to order, that the rule for stating the force of his majesty's ships, which prevailed prior to 1793, and which in fact never was formally abrogated, should be revived and established; and that in future all his majesty's ships should be rated at the number of guns and carronades which they actually carry on their decks, quarterdecks, and forecastles."

Error
in a
state-
ment
in it.

A reference to the early pages of this work will raise a doubt as to the correctness of the passage, "which prevailed prior to 1793," unless we explain that, as "guns" were the only species of ordnance named in the original order fixing the rates of the ships, no ship in the british navy, prior to 1793, nor subsequently indeed, did mount more "guns," than is, long guns, than her established or rated number; but that, as far back as January, 1781, 429 ships belonging to the british navy carried from four to 12 pieces of carriage-ordnance, or, as the French expressively say, "bouches à feu," more than their rated number, will not, we presume, be disputed.*

We are sorry to observe that the new order confines the guns (for we must persist in including carronades within that term†) to the "decks, quarterdecks, and forecastles," because every ship belonging to the three higher rates of the navy still mounts six guns more than she rates. These guns, it is true, are 18-pounder carronades; but many of the 80s and first-class 74s have carried 24-pounders, and may again, if a war breaks out. Moreover, the public is informed by the admiralty navy-list, that "the force of each ship is stated according to the number of guns and carronades actually carried," without any exception as to the poop, or roundhouse: hence, when it becomes known, that the Superb, of "78 guns," mounts 84, and the Bulwark, of "76 guns," 82, what will people suppose, but that the new rating system, like the old one, carries concealment

British
ships

† Ibid. p. 55.

in the background? The best remedy is, in our opinion, to disarm the poop of the six 18-pounder carronades, and to level the barricade: the ships will experience no sensible diminution of force, and be much more snug and seaworthy. 1817
to
1820.

Viewed as a whole, the new rating system is a very important state measure; but, as depending upon the guns which each ship is calculated to mount, the plan will require an active war to perfect it. Not having used carronades to the extent of the British, the French have little if any thing to alter in their system. If a french 74, when fitted out by the English, is mounted with 78 guns, it is not, in general, because she had carried that number in the french service; but because, for the accommodation of the far most important man on board a french ship, be the government a monarchy or a republic, two ports of a side were left vacant in the cabin. With respect to their frigates, the French more usually denominated them 44s than 40s; and even the latter came nearer to the mounted force of the ship, than was the case with the british 38s. But the Americans, how did they act? Why their rating system was founded upon deception, and deception alone. They built "44s," and mounted them with 56 guns; and they have since built "74s," and mounted them with 102 guns, on three flush decks: although, owing to inability to bear the weight, from some error in the construction of the hull, the two first-built ships went to sea with no more than 82 guns. French
rating
system.

While on the subject of the american 74s, we will, having the means in our power, compare the force of one of the smallest of them with that of a british 74 of the middling class; a class that exceeds in number all the other line-classes in the british navy put together; and the only class of 74, which, in the event of a contest, the Americans would admit to be an equal match for a ship of theirs bearing the same denomination. Let us Ameri-
can
rating
system
74s.

1817 to 1820. Force of the Albion and Franklin compared. That ship mounts 28 long 32-pounders, weighing 55 cwt., upon her first deck, 28 long 18s upon her second deck, six long 12-pounders and 12 carronades, 32-pounders, on her quarterdeck and forecastle, and six 18-pounder carronades on her poop; total, 80 guns. Her net war complement is 594 men and boys, including 32 of the latter; and her measurement 1743 tons. The american 74-gun ship Franklin mounts 30 long 32-pounders, of 63 cwt., upon her first deck, 32 medium 32-pounders, of 52 cwt., on the second deck, and two of the same guns and 18 carronades, 32-pounders, on the quarterdeck and forecastle; total, 82 guns. Her complement actually on board in 1818 was 786 men and boys, including but eight or 10 of the latter; and she measures 2124 tons. Admitting, then, these ships to be mutually opposed, the following would be their comparative force:

		ALBION.	FRANKLIN.
Broadside-guns	No.	40	41
	lbs.	982	1312
Crew	No.	594	786
Size	tons	1743	2124

Remarks on the subject

So much for the equality of force between an american 74 and a british 74 of the class of the Albion; and yet, were a war to break out to-morrow, sir William Hoste* would consider himself peculiarly fortunate (and where is the captain of a british 74, indeed, who would not?) in falling in with the Franklin, commanded by the most renowned of the american commodores.

Dimensions of the Franklin.

We will now proceed to state a few particulars respecting the construction, equipment, and qualifications of the Franklin, the result of an inspection of the ship when she lay at Spithead in January, 1818; and which particulars, to the british public at least, are as novel, as it is hoped they will prove interesting. The Franklin was laid down at Philadelphia in the summer of 1813, and launched in

* The Albion's captain till June, 1825.

August, 1815. She is built of seasoned live oak, admirably put together, and, like the generality of Philadelphia ships, highly finished in every part; has a round bow, and works her cables, similar to other three-deckers, on the second deck. We call her a three-decker, because, in fact, her upper deck is continuous from stem to stern, similar to the first and second, with chocks and fittings for five ports of a side along the waist: so that the ship can mount 30 guns on this deck, (called "spar deck" by the Americans,) similar to the 44s.* Her principal dimensions are as follows:

Length from fore part of the stem to the back of the port at the wing transom	ft.	in.
Breadth extreme	197	0
First-deck ports apart	50	0
Height of ditto from water	8	6
Draught of water abaft, with nine months' provisions on board	4	7
	24	0

After what has appeared in these pages respecting the american frigates, no doubt can remain, that this american line-of-battle ship is well found in all her stores, and that her guns are properly mounted and secured. She is, to all appearance, a very snug ship, and has been pronounced to be a very stiff one; an excellent sailer on every point, and a good sea-boat. She is steered with an iron tiller 16 feet long. Her lower masts, in their naked state, are not stouter than those of a british ship of the same dimensions, but they have each, as we noticed in the frigates, immense quarter-fishes, that make them appear of an extraordinary size; and the whole of the rigging, both standing and running, is far stouter than would be established upon a similarly-sized ship in the british navy. Her galley, dispensary, capstan, and pumps, are all of the most improved construction: her pumps, indeed, are remarkable for their simplicity, the ease with which they are worked, and the quantity of water they discharge.

* See p. 6.

1817
to
1820.

Error
com-
mitted
in her
con-
struc-
tion.

One error was committed by her architects. They did not calculate properly the bulk of water, that a hull so stoutly built, and so heavily laden with guns, would displace. Hence, her lower-deck ports are brought nearer to the water than was intended, or than is consistent with a due regard to the use of her lower battery in blowing weather. For instance, in the year 1818, the Franklin's midship lower-deck port was only 4 feet 7 inches from the water, while that of the british small-class 74 is usually 5 feet 10 inches; but the Franklin was then victualled for nine months, and had on board a quantity of stores for other ships in the Mediterranean. With six months' provisions on board, the height was stated to be about 5 feet 6 inches. The Independence, built at Boston, and launched eight or nine months before the Franklin, possessed the failing in a much greater degree; her ports were within 3 feet 10 inches of the water, and she was not considered safe to cross the Atlantic without half-ports.

Force
and
dimen-
sions of
North-
Caro-
lina.

However, the fault certainly increased the ship's stability; and the four last-built american line-of-battle ships, the Washington, (the second,) Ohio, Columbus, and North-Carolina, are of greatly increased dimensions, and, even with their full establishment of guns, 102 in number, carry their ports at a proper height. We have recently gleaned a few particulars respecting the last-named ship, which is now in the Mediterranean under the command of our old friend commodore Rodgers. The North-Carolina measures 206 feet on the gun-deck, and is 52 feet some odd inches in moulded breadth; which gives the ship about 53 feet 4 or 5 inches for her extreme breadth, and makes her measure about 2650 tons english. Her actual force at this time, according to the representation of a british officer who has recently been on board of her, consists of 34 medium 42-pounders on the first deck, 34 medium 32-pounders on the second deck, and 34 carronades, 42-pounders, on the third deck; total 102 guns. Her comple-

ment now on board is 1000 men. Her lower masts and topmasts are short, but of an immense stoutness. The mizenmast is within 4 inches of being equal in circumference to the Albion's mainmast. The masts have a fish on each side from the step to the head; and commodore Rodgers told the post-captain who was paying him this visit, that, in an action in the Constitution when he commanded her, he had 32 shot through his mainmast, but did not lose it; which he attributed to the shortness of the mast, its size, and the strengthening fish. Had we been standing by the commodore, when he made this bounce, we should almost have been tempted to ask him, what action it was in which he commanded the Constitution.

We have already compared together an american and a british 74: we will now give a figure statement, showing the relative force of an american 74 (for so the North-Carolina is officially rated) and a british 120. The force of the Caledonia has already been particularized;* but her third-deck guns have since been changed from long 18 to Congreve's 24 pounders, and her present establishment gives her six, instead of two, poop-carronades, or 126 guns in all. The following, then, will be the comparative force of a british 120, and an american first-class 74, gun-ship:

		CALEDONIA.	NORTH-CAROLINA
Broadside-guns..	{ No.	63	51
	{ lbs.	1648	1972
Crew	No.	891	1000
Size	tons	2616	2650

It was given out as the intention of the american government, had the treaty of Ghent been broken off, to have cut down the Franklin and Independence to frigates, and have sent to sea, to meet the two-deckers of England, the ships then building of the class of the North-Carolina. Had one of the latter

1817
to
1820. } captured or sunk a ship like the Albion, even the president, in his next speech to congress, would not have scrupled to tell the world, that an american 74 had vanquished a british 80.

The three remaining annual abstracts may be referred to together.* As they call for no particular remarks, we shall merely state that the number of commissioned officers and masters belonging to the british navy at the commencement of the respective years 1817, 1818, 1819, and 1820, was,

Officers

And the number of seamen and marines, voted for the service of the same four years, was, for 1817, 19000, for 1818 and 1819, 20000, and for 1820, 23000.†

Prin-
ciple
of the
diago-
nal
frame
in
ship-
build-
ing.

We would, most willingly, give an account of the improvements that have of late years been introduced into the british navy; but our limits restrict us to a few superficial remarks. A great change has doubtless taken place, as well in the contour, as in the arrangement of the materials that compose the fabric, of a british ship of war. The principle of the change, as respects the arrangement of the materials or timber, consists in the substitution of the triangle for the rectangle, with the view of conferring upon every part of the fabric a uniformity of strength.

* See Appendix, Annual Abstract, Nos. 26, 27, and 28; also Appendix No. 19.

† See Appendix, No. 20.

The frame of the hold consists of a series of triangles, united by trusses; and the openings between the ribs, or outer timbers, are filled with slips of wood, calked within and without, and rendered quite impervious to water; so that, should a vessel so constructed, lose her main keel and even a proportion of the plank from her bottom, she would still remain water-tight. As one instance, the british 20-gun ship *Esk*, captain Edward Lloyd, while running between nine and ten knots, struck, near Bermuda, on a bank of coral and hard sand; where she lay, beating heavily, 48 hours. When got afloat, the ship was found with her main keel rubbed off nearly its whole length, (at one part the dead-wood was crushed up to the keelson,) and yet it was not until 11 hours afterwards that the *Esk* began to be, and that only in a slight degree, leaky. The *Vigilant* revenue-cutter, driven, and apparently wrecked, upon a bed of shingles in Douglas bay, Isle of Man, and yet got off and brought in safety to Plymouth, is another remarkable instance. As a still more recent case, the 10-gun brig-sloop *Frolic*, employed in the packet-service, after lying eight hours on her beam-ends, upon the rocks off Sable-Island, beating violently, got safe into Halifax harbour.

The system of diagonal timbering, for which the british navy is indebted to sir Robert Seppings, one of the surveyors on the establishment, was first commenced in the year 1800, upon the *Glenmore* 32. In 1805 it was further applied, at Chatham, to the *Kent* 74, to give auxiliary strength to that ship after her return from the Mediterranean. It was then introduced, to a certain extent, in the building of the *Warspite* 74; and, after the principle had been examined at the admiralty by a committee appointed for the purpose, directions were given to rebuild the *Tremendous* 74 to the full extent of the diagonal principle. This was done, and the principle was extended even

1817
to
1820.

Instance

1817
to
1820. } to the decks. The Tremendous was found so completely to answer, that the diagonal system,* both in building and in repairing ships, has since become general in the british navy. The Howe, launched March 28, 1815, was the first ship laid down and built upon the principle. A rumour for a short time prevailed, that this fine first-rate, just as she had entered one of the new docks at Sheerness, was infected with the dry-rot. So far from it, there is not, at the moment we are writing this, from the best inquiries we can make on the subject, a sounder ship in the british navy.

Round
sterns. } Sir Robert's important improvement in giving to line-of-battle ships a circular bow, we have already slightly touched upon:† his ingenuity has since produced a more surprising, and an equally important, change at the opposite extremity of the ship, a circular instead of a square stern. To convey an idea of the advantages of this plan we shall make a quotation from a work that treats professionally on the subject: "The sterns are also formed circular, and to add to their strength, as many timbers as possible are run up: this presents a very formidable stern-battery, enables the guns to be run out so far as to prevent accidents to the stern by their explosion; the danger arising from being pooped is considerably diminished, if not wholly prevented; and the obstruction to the ship's progress, which, according to the old plan, was occasioned by the projection of quarter-galleries, when the ships were going on a wind, is removed. In fine, by this alteration, the ships are every way more seaworthy and better adapted for defence; qualities which are

* See a very valuable work recently published, along with "Elements of Naval Architecture," entitled "An Appendix, containing the principles and practice of constructing ships, as invented and introduced by sir Robert Seppings, surveyor of his majesty's navy, by John Knowles, F. R. S. secretary to the committee of surveyors of his majesty's navy."

† See vol. iii. p. 532.

so essential and indeed indispensable in ships of 1817
war."* to
1820.

As a proof of the good opinion entertained of this plan by the lords commissioners of the admiralty, an order of the board, dated on the 13th of June, 1817, directs, that all new ships, down to fifth-rates inclusive, are to be so constructed, and all ships of the same rates receiving extensive repairs are also to have circular sterns, provided the timbers in the old or square sterns are defective. By this alteration in her construction, the ship becomes, beyond a doubt, a stronger vessel and a more efficient man of war; advantages which it will require something more than an unsightly appearance (and even that, we presume, is a remediable defect) to counter-balance. The number of ships belonging to the british navy, which, on the 1st of January, 1820, were repairing, building, or ordered to be built, with circular sterns, amounted to 67,† and the number of ships building of teak, at the same date, amounted to 19.‡

Order
for
build-
ing
ships
with
them.

On a former occasion, we ventured to suggest the advantages that might be derived, in the construction of ships of war, from the opinions of naval officers of experience.‖ A post-captain, of acknowledged nautical skill, and of tried gallantry, has recently proved himself a very eminent naval architect. "Captain Hayes," says Mr. Marshall, "is the author of a pamphlet on the subject of naval architecture, his proficiency in which important science is the result of many years' professional experience and deep consideration. His proposed system, we understand, meets a point hitherto considered impracticable, viz.: that of building a thousand vessels, if required, from a given section, without the variation of a needle's point, reducible from a first-rate ship

1817 to a cutter, each possessing excellent powers and
 to advantages of every description in their respective
 1820. class. Since the publication of the above pamphlet,
 in which he carefully abstained from saying, or even
 hinting, that he had made any progress in the formation of such a system, two vessels have been built, in a royal dock-yard, on his projection: the first, a cutter of about 160 tons,* is said to embrace stability under canvass with little ballast, great buoyancy, better stowage, and swifter sailing qualities, than any model yet designed by known schools of naval architecture. The second, a sloop of war,† is at present absent on her first experimental cruise, in company with two other vessels of the same class, one of which was designed by sir Robert Seppings, and the other built by the students of Portsmouth dock-yard, under the superintendence of professor Inman."‡

Con- In the former edition of this work, we were
 cluding induced to give a brief account of the first two expe-
 re- ditions to the polar regions, in search of a north-west
 marks. passage. Other expeditions to the same spot have since been undertaken; and, if we broached the subject at all, we could not expect to make it interesting, or even intelligible, unless we brought down occurrences to a date far beyond the period to which this work, by its title, is restricted. Several works have been published exclusively on the subject of these expeditions, and they are in most people's hands: consequently there is the less occasion for us to deviate from our plan, and enlarge a volume already of a much greater bulk than any of its companions.

Letter from captain Phillimore to sir William Congreve, bart.

H. M. S. Eurotas, Falmouth,
October 11th, 1813.

Dear Sir,

I AM afraid you will attribute blame to me for not having written to you about your guns, but the fact is, I have been unwilling to give an opinion, till I had an opportunity of trying them; and the chasing, in a ship of this sort, looking out from a fleet, is so very frequent, and the attention requisite to a new ship's company occupies a great deal of time; but I hope you believe I am ready and willing to give any information you may like to write for. On the (my) arrival in the Brest squadron, I invited commodore Malcolm, and all the captains, to come on board: we tried them eight times, with full allowance of powder, and double-shotted, which they stood remarkably well; indeed, every one of them went away pleased with the gun.

If well manned I could fight both sides with ease, and I cannot express too strongly how delighted I am with them in a gale of wind; we had a very heavy gale coming in here, and I had to carry a heavy press of sail off Ushant; the guns did not work in the least, and the ship did not seem to feel the smallest inconvenience from them. A few days before I left the fleet, commodore Malcolm mentioned (in conversation to me) he should like them on the Queen-Charlotte's main and middle decks. I write this in haste, being anxious to send many letters by this post.

Believe me, dear sir,

Yours faithfully,

(Signed)

J. PHILLIMORE.

No. 11. See p. 511.

N.B. In the "letters of reference" of Abstract No. 28, an error occurs, in consequence of each of the eleven letters next below T being placed one class too low, and the twelfth letter, F, being left out. In No. 27 they stand right.

NOTES
TO
ANNUAL ABSTRACTS.

NOTES TO ABSTRACT, No. 20.

^a The Hogue, commonly called the *La Hogue*; an appellation sanctioned not only by Steel's, but, until very recently, by the admiralty navy-list.

^b Number of hired vessels about 52.

NOTES TO ABSTRACT, No. 21.

^a The Forth, built of fir. The remaining four in the "Building" column are the Liffey and Severn, also of fir, and the Glasgow and Liverpool, of pitch-pine.

^b Of these 14 frigates, two were ordered to be built of teak, four of oak, and the remainder of red pine.

^c Of these 12 frigates, two were ordered to be built of oak, three of yellow, and the remainder of red pine.

^d Late the Hannibal, american merchantman; an extraordinary fine ship, mounting 24 guns on a flush deck.

^e Number of hired vessels about 52.

NOTES TO ABSTRACT, No. 22.

^a The Goliath, Majestic, and Saturn, three of the small-class 74s cut down, fore-and-aft, to the clamps of the quarterdeck and forecastle.

^b The *Leander* and Newcastle, built of pitch-pine.

^c The *Akbar*, late Cornwallis; had been a teak-built indiaman, purchased in 1801.

^d Ordered to be built of teak; the Seringapatam at Bombay, and the *Tigris* to be framed there and brought to England by the former.

^f Number of hired vessels about 47.

NOTES TO ABSTRACT, No. 23.

^a The *Nelson*; began building at Woolwich in December, 1809, launched July 4, 1814. Except that the area of the line of floatation and the depth of hold in the *Nelson* were greater, her draught was similar to that of the *Caledonia*.

Principal dimensions of the Nelson.

Length on the range of the first or lower gun-deck, from the rabbet of the stem to the rabbet of the stern-post.	ft. 205	in. 0 $\frac{1}{2}$
Breadth extreme	53	8
Depth of hold.	24	0
Burden in tons 2617 $\frac{1}{4}$ ths.		
Mainmast, { length	123	9
{ diameter	3	5
Main yard, { length	109	3
{ diameter	2	2
Bowsprit, { length	75	1
{ diameter	3	0 $\frac{1}{4}$

It here appears, that the *Nelson's* depth of hold is 10 inches greater than the *Caledonia's*, and that the former's masts and yards, wholly on account of the alteration made in her hull, are considerably larger. The main mast and yard of the *San-Josef*, a late spanish three-decker of 2457 tons, were of the same dimensions as those of the *Nelson*; but the former's bowsprit was two feet 11 inches longer and two inches one-eighth thicker. The mainmast of the *Commerce-de-Marseilles*, the celebrated french three-decker brought from Toulon in 1793, was only one inch longer, and a quarter of an inch stouter, than the *Nelson's*; but the former's main yard was as much as eight feet one inch longer, and two inches and a half stouter, than that of the latter.

The *Nelson* not having yet been at sea, her qualifications as a

sailer and sea-boat, although the highest expectations are justly entertained of them, cannot at present be stated.

^b The hired vessels appear to have been all discharged.

NOTES TO ABSTRACT, No. 24.

^a The Howe and St.-Vincent, of a similar construction to the Nelson. The first, of 2619 $\frac{1}{4}$ tons, began building at Chatham in June, 1808, and was launched March 28, 1815; the second, of 2612 $\frac{1}{4}$ tons, began building at Plymouth in May, 1810, and was launched March 11, 1815. For the principal dimensions of these ships, and some account of their masts and yards, see the preceding page.

^b One of these was the Isis, first built as a quarterdecked 50, of 1190 tons, draught-measurement, from the reduced lines of the late danish 80-gun ship Christian VII.; as were also the Salisbury, the single ship, of 1199 tons, in the first "Built" column of class T in No. 23 Abstract, and the Romney, the single ship, of 1227 tons, in the same column and class of the present abstract. After the Isis had been constructed, it was thought advisable to cut her in two, and add an additional port and space to her length; and also, to take away her poop, forecastle, and quarterdeck, or at least as much of the latter as reached from forward to about a beam afore the mizenmast. This made the Isis a flush two-decker, with a short quarterdeck, or large roundhouse, merely intended as a roof to the captain's apartments, and increased her measurement to 1321 tons. The number of guns she was to mount, in her old and in her new state, was the same, 58; but the alteration in her construction gave the Isis nearly a double superiority in force, as the following statement will show:

	Quarterdecked.		Flush.	
	Guns.	Pdrs.	Guns.	Pdrs.
First deck.	22 long	24	28 long	24
Second deck.	24 „	12	2 „	24
Quarterdeck.	2 „	6	28 carrs.	42
Forecastle.	10 carrs.	24	—	—
	58		58	
Broadside metal in lbs. .	560		948	
Men and boys	350		450	

According to this, the Isis gained two additional ports of a side on her first, and three on her second deck, instead of one on each, as had previously been stated. The fact is, her foremost or bow-port (meant to be vacant) on the first deck was considered to be

sufficiently aft to admit a standing gun, and a fresh chase-port was cut through farther forward. This gave the ship 14 guns of a side on that deck. With respect to her second deck, the substitution of carronades for long guns caused the ports to be altered, and admitted them to be nearer together; which at once gave the required number.

The second of the two ships in the "Built" column of this class was the Java, of 1458 tons, constructed from a draught prepared by the surveyors of the navy, and made a trifle shorter and narrower than the Leander and Newcastle, but established with precisely the same force in guns and men.

The principal dimensions of the Java were,

	ft.	in.
Length of lower deck	171	: 11½
Breadth extreme	43	: 6
Depth in hold	14	: 3
Burden in tons 1458.		

NOTES TO ABSTRACT, No. 25.

* Whatever remarks may have suggested themselves upon the eligibility of this plan of reform in a national point of view, will be found in their proper place in the body of the work. Our present business is with the details of the system, particularly as they affect that arrangement or classification of the ships, which is the groundwork of these abstracts.

How to effect the change from one plan of rating to the other, without disorganizing the particular abstract, into which the new classification, from the date of its commencement, naturally fell, was long a subject of difficulty. At length, I decided to arrange the old and new classes in the manner adopted in the abstract before us, and to remove the ships to their new stations by the pair of converted columns; a method that, if not quite so intelligible as could be wished, possesses the merit of not disturbing, in the slightest degree, the arithmetical connection of the figures.

Class A is the same in each rating. B receives the San-Josef, and parts with the building ships, London and Princess-Charlotte. C takes the latter, along with the Ocean, and gives up the San-Josef. D merely parts with the building ship Trafalgar. Old E is extinct. Old F, or new E, takes the last-named ship, and parts with the Ocean, and becomes exalted from the second to the first rate. Old G is extinct. Old H, or new F, receives, along with promotion, one ship, the Prince, from the last class but one (old a and new X) of the abstract. Old K divides into new G and H, comprising the whole of the second rate; and old L and M distribute themselves into the first five classes of the third rate, I, K, L, M, and N. Old O is new P; and old P, by transferring its six individuals to

the hospital and receiving ship class, becomes extinct. It should here be remarked, that the official register of the new rating, as did that of the old, takes no note of the calibers of the guns, or of the size of the ships: hence, the seven new classes from I to P inclusive form but three in the admiralty list.

The explanation, just given, of the process of removing the line classes may suffice, without investigating the remaining classes, further than to point out where, by the new arrangement, a class is raised above the heads of any other class or classes. Q, the first new under-line class, is an instance of this, having formerly rated three classes lower. The strict numerical gun-force is here, indeed, a little defective; as the ships of the next, or R class, carrying heavier metal and being, as well as larger, a full third stronger in frame, ought to take precedence of the ships of Q.

The comparison made, in a former note, between the Isis in her intended, and the same ship in her actual state of construction, will best explain, why a flush ship, of any given number of guns, ought to be classed above, and not with, a quarterdecked ship of the same number of guns. Thus, R and S 58s, in the new rating, rank above T 58; that is, they do so in the abstract before us. But, in the official register, where no such distinction is acknowledged, the ships are all huddled together in one class; even although the ships of T are established with a less complement, by 100 men, than those of R or S. It is also worthy of remark, that, as the quarterdecked ships, now that they have the whole of their guns enumerated, rank much higher than formerly; so, except in the case (Q) cited in the last paragraph, and in any other (old and new R for instance) wherein a pair of bow-chasers may have been omitted, the flush ships, mounting no additional guns, undergo no change in their classification. Thus, M and N, from being close neighbours, separate, the one into Z, the other into D, with three classes intervening.

In the old rating there are 50, and in the new but 42, cruising classes. According to the official register, however, there should be but 36 of the latter; the two classes distinguished by caliber, (K and M,) the two by size, (O and P,) and the three by decks, (S, T, and E,) not finding places in it, while a 34-gun class, of one individual, is added. The reason for excluding the latter from the abstract will appear in a note to class Z, and that for admitting the whole of the former has already been stated. It should be mentioned that, when the new regulation was first adopted, two additional classes, an 82 and a 38, made their appearance in the list, and several of the ships in the other classes were differently arranged. But, shortly afterwards, the 82 was incorporated with the 80, and the 38 with the 42; and the other ships became, with the exceptions hereafter to be noticed, classed as they appear in this abstract.

But, besides the classes arranged under the head of "New Rating," the official list still contained a set of classes of the "Old Rating," such as the 98, the 64, the 50, the 38, the 36, the

32, and some others. The alleged reason for this was, that the ships composing those classes, being laid up for permanent "harbour-service," had no armament belonging to them. If entitled to no armament, why were they designated as 98, 64, 50 gun-ships, &c.? None of the ships in the new rating carry any guns until they are fitted for sea; and yet all alike bear a designation significant, not of their "ordinary," but of their commissioned force. The term is meant as descriptive of a class, composed of non-effective, as well as effective ships: why, then, not include the harbour-service ships among the former; or else, class them together as "harbour-service ships," without any reference to their original rank in the navy?

Having thus, in illustration of this rather complex abstract, entered, at a tolerable length, into the minutiae of the plan upon which the new classification of the British navy is conducted, I shall proceed to point out and explain two or three of the more important of those few cases in which I have been induced, chiefly for consistency sake, to remove ships from one class to another, without the authority of the official list.

^b Until the new system, the *San-Josef* mounted, on every deck, the same number of guns as the *Ville-de-Paris*. It appears, however, that the former ship is to carry 30, instead of 32, guns upon the third deck. Considering this either as a mistake in the register, or as an alteration not likely to be enforced when the ship is again, if she ever should be, fitted for sea, especially as the *San-Josef* is still allowed her 850 men, (50 more than a 110-gun ship's complement,) I have classed her as a 112-gun ship. The new plan of substituting Congreve's 24-pounders for the guns on the third deck, by equalizing the calibers in the two ships, renders nugatory the distinction between the classes of old B and C, and occasions the *Ville-de-Paris* and *San-Josef* to approximate more closely than ever in their armament.

^c The *Impregnable* registers as a 104; and yet the *Trafalgar*, the building ship associated with her, is constructing from the former's draught, somewhat enlarged it is true, but chiefly in breadth, to increase her stability. Of the two 106-gun ships in the official list, the second is the *Royal-Sovereign*, of 2175 tons, a ship armed precisely as the 104s, except in being ordered two additional carronades for her quarterdeck; an alteration, in a three-decker, too insignificant and precarious to warrant the sacrifice of consistency. This consideration has induced me to substitute the *Impregnable* for the *Royal-Sovereign*; and the latter accordingly remains with the 104s.

^d The probability that the new plan of arming the third decks of three-deckers with Congreve's 24-pounders, instead of long 12 or 18 pounders, will extend to these ships, if any of them should hereafter be required, or be found serviceable enough, to go to

sea, is the reason that I have abandoned the former distinction between 18 and 12 pounder ships, and classed them, as in the official list, together.

* One of these ships, the *Endymion*, officially ranks as a 48. It is true that she mounts one gun of a side on the main deck less than the other five ships; but the latter were built from the same draught, and merely differ in being pierced for an additional port on the main deck. See p. 212. As the *Endymion* is old and nearly worn out, and her five class-mates, being built of soft wood, are not likely to survive her, I have chosen to retain the former with them, rather than remove her to a class, of which she would be the only individual. The official list contains a sixth 50-gun frigate, the *Acasta*; but, as she carries 18-pounders on the main deck, and is much smaller, I have ventured to assign her another place: moreover, she is an old ship, and cannot last many years longer.

† These five ships are the *Acasta*, *Cambrian*, *Lavinia*, *Révolutionnaire*, and *Forte*. The first is the ship referred to in the latter part of the last note; and the two next ships are officially classed as 48s: the two last-named, therefore, are the only cruisers of this class requiring to have their pretensions discussed. The *Révolutionnaire*, it is believed, usually mounted 18 carronades, besides two long guns, on her quarterdeck and forecastle, making 48 guns in all, and, being of 1148 tons, was well able to carry them; but she now officially classes as a 46. The *Forte*, measuring 1155 tons, was built, plank for plank, from the draught of the *Révolutionnaire*, and consequently possessed the same capacities. Most unaccountably, however, (unless it be considered as a peace-establishment,) the *Forte* has been assigned but 14 carronades, and, on that account, though manned with a full complement of a 46, descends to a 44. Considering that a war would instantly restore the *Forte* to her proper rank by the side of her prototype, I have ventured so to place her.

‡ The *Seringapatam* and *Tigris*, building from the draught of the late french frigate *Présidente*, afterwards named *Piémontaise*. The two former, the first of 1152, the second of 1162 (occasioned by a slight increase in her length from being constructed with a circular stern) tons, are registered as 46s; and, yet in January 1814, the *Présidente* appears to have mounted, along with her 28 guns upon the main deck, twenty 32-pounder carronades and two nines upon the quarterdeck and forecastle, total 50 guns.

In fact, the *Présidente* could have mounted (she was broken up in 1815) 30 guns on her main deck; and so can with ease (they being pierced for 32) the two ships building from her. The official register classes as 48s the *Loire* and *Sibylle*. It is true that these ships, obtaining two additional carronades each, did mount 48 guns; and so did the *Amelia*, *Africaine*, and *Madagascar*. The

latter, indeed, mounted 50 guns. There would be an end to all useful classification, if such instances were not considered as accidental exceptions to the general rule.

^h Take away the Naiad and Phaëton, and two foreign-built ships, the Alceste and Madagascar, and, between any two of the remaining 34 frigates, no greater difference of size can be found than 39 tons. Nor does that occur in more than one instance. Generally, the ships do not disagree in size beyond 15 tons.

ⁱ Of these three ships, the one officially classed as a 44 is the Andromache. The remaining two, the Pique and Unité, class as 42s. The latter certainly appears not to have mounted more than 42 guns; (26 Gover's 24s on the main deck;) but, being the largest ship of the three, the Unité can as well mount 44 guns as the Andromache herself, when named the Princess-Charlotte, did 46, and the Pique the same. Such was the official oversight as to the latter ship's proper classification, that, in the old rating, she ranked only as a 32, from the time of her capture in 1800 until the 9th of April 1813, when an admiralty-order promoted the Pique to a 36, and this without at all augmenting her force, that already exceeding the establishment of her new class. Were these three ships to be transferred to the class next below them, the average difference in size between the 37 cruisers of the latter and them would be as much as 95 tons. Moreover, the 44 is a class that will soon disappear from the list.

^k The Eurydice and Ganymede. The first, of 521 tons, from mounting on her quarterdeck two more 18-pounder carronades than established upon the 32-gun class, officially ranks as a 34. The second ship, of 601 tons, with more reason, (though mounting, like all these ships, but 22 guns on the main deck,) classed also, for a while, as a 34. Subsequently, the Ganymede registered (by mistake, as it would appear) as a 26; and thus the Eurydice was left as the only 34-gun ship in the British navy. In point of size, the Eurydice is rather exceeded by each of the three ships, with whom she and the Ganymede are here associated. Upon the whole, these two ships cannot, with any regard to consistency or practical utility, be classed any where else than where I have ventured to place them.

NOTES TO ABSTRACT, No. 26.

^a These six ships, the Formidable, Monarch, Powerful, Thunderer, Vengeance, and Ganges, (since built at Bombay, of teak, and with a circular stern,) are from the draught of the Canopus, late Franklin, captured at the battle of the Nile, and are constructing with diagonal frames.

NOTES TO ANNUAL ABSTRACT.

^b These five ships, the Chichester, Lancaster, Portland, Southampton, and Winchester, constructed with diagonal frames and circular sterns, agree in dimensions with the Java, except in being four inches broader.

NOTES TO ABSTRACT, No. 27.

^a An improvement upon the quarterdecked (R) ship-sloop class, and established with two 32-pounder carronades on the main deck, and six 18-pounder carronades with two long guns upon the quarterdeck and forecastle. One of them, the Niemen, was built of Baltic fir; and the single ship of this class, in the "Building" column of No. 26 Abstract, the Atholl; was constructed of larch, cut from the estate of the duke of Atholl.

^b Surprising, indeed, that the navy-board should continue adding new individuals, by dozens at a time, (see the preceding abstracts,) to this worthless class.

There should have been a reference marked at the two "ordered" ships of class Q. One of them was named the President, built from the draught of the american frigate of that name. The other was the Worcester, similar to those noticed at the bottom of the preceding page.

NOTES TO ABSTRACT, No. 28.

^a The Royal-George (first named Neptune) and St-George: the latter building at Plymouth, and the former at Chatham, upon the lines of the Caledonia, without, we believe, the alteration that had been adopted in the case of the Nelson. See p. 625.

^b The Ocean. This ship was intended to be of the same dimensions as the Dreadnought, Téméraire, and Neptune, that averaged 2131 tons, but her draught was extended so as to make her 2276 tons. However, the plan was not found to answer; and, having failed as a 110, the Ocean is now to try her success as an 80.

^c (misprinted ^b.) The Hastings, built in India of teak, and purchased by the british government. The first instance, we believe, of the kind, except in the smaller classes.
